REMARKS

THE LIBRARIES OF GREECE,

THE REV. R. WALPOLE, M. A.

WITH AN ACCOUNT OF THE CATALOGUE OF BOOKS NOW PRESERVED IN THE MONASTERY OF PATMOS;

AS IT WAS COPIED FOR THE MARQUIS OF SLIGO.

These Remarks of Mr. WALFOLE being too long to be inserted in the Notes, among the Extracts from his MS. Journal, the Author has prefixed them as an appropriate Introduction to this Volume.

THE names of Nicholas the Fifth, of Francis the First, of some of the Medici family, of Bessarion, Busbeck¹, and Peiresc, are held in just estimation by the lovers of antient literature. By their means, the Libraries of Europe have been furnished with great numbers of valuable Manuscripts, collected with cost and labour, in different parts of the Levant. The first of these persons laid the foundation of the VATICAN LIBRARY, and supplied it with many Manuscripts from Greece. From the same country, Francis the First, at the exhortation of Budæus,

VOL. VI.

⁽¹⁾ In this manner he writes his own name, always. Lamb. l. i. 99. & l. xi. addit. p. 1007.

procured many also; particularly from MOUNT ATHOS. The exertions of the Medicean family are familiar to every one. Bessarion, who died in 1483, had made a collection of Manuscripts at the expense of 30,000 crowns; and his own account of his exertions in the cause of Greek letters is worthy of notice¹. The Manuscripts purchased by Busbech, during his embassy, are known to every scholar, from the account given of them by Lambecius. Many also were obtained in the East by those whom Peiresc² had sent out; they visited Cyprus, Egypt, and Constantinople; and in the first of these places, portions of Polybius and Nicolaus Damascenus were found³.

(1) "Cæterum, non tam magnum numerum librorum quam optimos et excellentes, deque singulis solummodo unum exemplum studui colligere, unde evenit, ut ferè omnia volumina quæ in ruinis universa Græciæ remansérant integra, et quæ vix alibi reperiuntur, congesserim." Cam. Op. Sub. Cent. 3.

(2) In 1631. See his Life by Gassendi.

(3) As many Manuscripts had been collected, at vast expense, in Greece, for the Library at BUDA (destroyed by the Turks in 1256), we ought not to omit mentioning it. Mexander Brassicanus had seen in it the whole of Hyperides with Scholia, the Works of many of the Greek Fathers, and of the Classical Writers. From this Library issued parts of Polybius and Diodorus Siculus. A Manuscript of Heliodorus, from which was taken the first edition of the Æthiopics, was found by a soldier, and brought to Vincentius Obsopaus: it belonged to this Library. Neander thus speaks of the collection: "Ex media Græcia inæstimandis sumptibus emerat Matthias Corvinus res." Epist. p. 10.

There is no doubt that Constantinople and Athos have contributed the greatest number of the Manuscripts we possess in different parts of Europe. There were monasteries full of learned men at Byzantium, to a late period; and every monastery had its library. The Turks. on their conquest, did not occasion that indiscriminate destruction which idle declamation has sometimes imputed to them. Mahomet the Second secured the Library of the Greek Emperors, which was preserved by his successors, until it was destroyed by Amurat IV.4 At Byzantium, Constantine Lascaris transcribed many of those works which were afterwards placed in the MADRID LIBRARY. In this city were procured those Manuscripts which were left to the ESCURIAL LIBRARY by Hurtado de Mendoza; and which had been presented to him by Soliman the Second. Possevin has given partial Catalogues of some of the Libraries at Constantinople; and a traveller in 1597 mentions a valuable collection which he had seen in that city'.

With respect to Athos, we find that two hundred Manuscripts are deposited in one library

(4) Hist. de l'Acad. IV. Jortin's E. H. vol. V.
(3) G. Dousa. It. Const. 71.

B 2

alone', brought from the monasteries on the mountain; and a great part of those at *Moscow*² had been collected by the Monk *Arsenius* in *Athos*, at the suggestion of the Patriarch *Nicon*.

We must add Thessaly, Chios, Corfu, Crete, Cyprus, Chalce (the island in the Propontis), Rhodes, and Epidauria, as places which have supplied some Manuscripts'. We should have had much valuable intelligence concerning the libraries in the monasteries of Thessaly, if the life of Professor Biornstahl had been prolonged. He had visited all of them; and had resided many days at Triccala, for the express purpose of copying a Greek Manuscript belonging to a monastery. Biornstahl was attacked by a fever at the foot of Mount Olympus: here he was obliged to continue ten days, without medical assistance; and was then taken to Salonica, where he died, in July 1779.⁴

(2) In the Library of the Holy Synod.

(3) See the following references: Diar. Ital. of Montfaucon; Fabric. Bib. Gr. 7. 241; Fabrotus Not. Basilicorum; Bib. Coislin. p. 178; Crusii Turco-Græc. p. 498.

(4) From a Writer of the date 1557, we have an important notice respecting a library on Mount Olympus : "Dicitur adhuc hodiè in Olympo Monte Monasterium reliquum esse thesauro optimorum librorum dives ac celebre." Orat. de Stud. Vet. Phil. inter Melanc. Declam.

⁽¹⁾ Præf. to the Catalogue of the Coislin. Library.

Notwithstanding our acquisitions are already great, we should not intermit our researches in the Levant. Many Manuscripts may be saved by them from destruction. "I myself," says Dr. Covell, " have seen vast heaps of Manuscripts (for I never found them on shelves, or in good order) of the Fathers and other learned authors, in the monasteries at Mount Athos, and elsewhere, all covered over with dust and dirt, and many of them rotted and spoiled "." An inquiry should be made into the truth of what was stated to Hemsterhusius by some Greeks⁶; "that part of the Comedies of Menander was still in existence." Application might be made to the Greek Nobles of the Phanar, many of whom are versed in Antient Greek, and who are probably the possessors of some valuable Manuscripts. Parts of the First Book of the Demonstratio Evangelica of Eusebius were printed by Fabricius⁷ from a Manuscript belonging to Prince Mavrocordato; and a copy of the Greek Orators, now in England, was the property of a Greek Noble.

- (6) Jul. Pollux. p. 1272, Note.
 - (7) Delectus Argumentorum.

⁽⁵⁾ Villoison's account of the destruction of Manuscripts at Patmos may be consulted. Proleg. to Homer.

It may be reasonably supposed, that many Manuscripts in Greece have experienced the treatment which works of the same sort have met with in other countries. Poggius, we are told, found, while he was at the Council of Constance, a Manuscript of Quintilian on the table of a pickling-shop. Masson met with one of Agobardus in the hands of a bookbinder, who was about to use it for the back of a book 1: and one of Asconius was about to be employed for the same purpose. Musculus found², in the roof of a Benedictine monastery, some of the works of Cicero, and the whole of Ovid. Numbers of Manuscripts in Greece are irrecoverably lost to us, either by design or accident; and of those, which we may hereafter meet with, we cannot suppose all will prove to be of equal value ':

Πολλοί τοι ναεθηχόφοεοι, παυεοί δέ τε βάχχοι.

(1) Naude, 121.

(2) "Accidit, ut aliquando sub ipso ædium tecto confusam dissolutarum membranarum congeriem Musculus offenderit," &c. M. Adamus in Vitá Musculi.

(3) Those which have an appearance of antiquity in the writing, are not always the most anticnt. The Monks employed persons who were copyists by profession; men who not only repaired the titles of Manuscripts, but were dexterous enough to copy the antient characters. "The Manuscripts written in *Lombard* letters," says *Simon*, "are not always from a hand as antient as the time of *Lombard* writing. The same may be said of other works."

Yet if we meet with only few of which we shall be able to say, as Casaubon⁴ once said to J. Scaliger, that they are " $\pi o \lambda v \tau i \mu \eta \tau \dot{\alpha}$, et verè $\chi g v \sigma o \tilde{v} \dot{\alpha} v \tau \alpha \xi \dot{\alpha}$," the trouble of research will be well requited ⁴.

A List of Theological Manuscripts in the Library of PATMOS has been given by Possevin⁶; their number amounting, according to his statement, only to fifty-five. The present Catalogue, containing the titles of ninety-two Manuscripts and about four hundred printed volumes, and of which an account is here subjoined, by no means precludes the necessity of further examination. The Greek compiler of it has not stated any circumstance relating to the Manuscripts, by which we can form an estimate of their value: he gives no information respecting the form of the letters or that of the spirits, or

(4) On receiving a Manuscript of the unpublished Mechanics of Athenaus.

(5) Some exertions on the part of the Government would, without doubt, be attended with success. Let us hear what was done in *France*, so late as in the time of *Fleury*: "Il a envoié dans le Levant quelques savans qui en sont revenus avec une riche moisson de Manuscrits ou Grees ou d'autres langues Orientales." *Bib. Rais. Juillet*, 1739.

(6) See the Appar. Sacr.

any of those subjects which would lead us to a knowledge of their respective dates.

There is one Manuscript mentioned in it, concerning which it is impossible not to feel more than common curiosity: it is one of Dioborus Siculus. By an accurate inspection of it, we should learn whether the hopes, which have been more than once entertained of the existence of the lost books of that historian. are in this instance also to be disappointed'. H. Stephanus had heard that the forty books of Diodorus were in Sicily. This report arose, probably, from Constantine Lascaris having said in Sicily, that he had seen all these books in the Imperial Library at CONSTANTINOPLE. Lascaris fled from this city, at the capture of it by the Turks. In the turbulence and confusion of that period, the entire copy to which he referred might have been lost. " Deum immortalem," says Scaliger, "quanta jactura historiæ facta est amissione librorum illius Bibliothecæ, præsertim quinque illorum qui sequebantur post quintum ⁹." all a

١T. Messenger from the Vixier.

CHAP. ON Tuesday, October the sixth, as we were sitting with the Governor, a Greek officer of the name of Riley, who had been interpreter to Colonel, now Sir Charles Holloway, in the Turkish army, arrived from Grand Cairo with despatches from the Vizier. He brought letters for us from England, which had been sent first to Constantinople, and then to Egypt, and yet reached us with so recent a date as the twelfth of August. When he entered the Governor's apartment, we supposed him to be a Turk: he wore the Turkish habit, and conversed with great fluency in the Turkish language: presently, to our surprise, he addressed us in English; and afterwards gave us intelligence of all that had happened at Cairo since we left that city. A report had reached him, after he sailed from Egypt, that the Vizier had been ordered into exile, to Giddah, where the air is supposed to be so unwholesome, that the punishment of being banished thither is considered as almost equivalent to death. Hearing that we intended to visit Patmos, he requested a passage thither in our vessel: his wife resided 0

upon that island, and it was his wish to see her, in his way to Constantinople. We readily acceded to his proposal; and a very fortunate circumstance it proved, in the services he rendered to us during a negotiation with the Monks of Patmos for the Manuscripts we afterwards obtained.

We employed the rest of our time principally Botanical Discovein botanical excursions, and were very suc-ries. cessful; having found no less than six nondescript species: although, as we mingled all the specimens collected in this island in March with those which we now gathered in October, we cannot precisely state the time when any particular plant came into flower. There is. however, reason to believe that they principally belong to the autumnal season; as our stay was very short in March, and it was before observed that the plants of this island had not then attained a state of maturity'. According to our usual plan, we shall only refer the reader now to the new-discovered species; reserving for a General List, in the Appendix to this Part of our Travels, the names and the localities of others,

(1) See Vol. III. Chap. VII. p. 258. Octavo edit.

CHAP.

- (1) I. A very curious small species of Plantain (Plantago Linn.), of which there is a figure and description in CLUSICS'S "Plantarum Rariorum Historia," lib. v. cap. 16. under the name of Catanance prima Dioscoridis; but this has been omitted by Linnæus, and by all the editors of his works. The whole plant is scarcely an inch and a half in height: its leaves are of a narrow lance-shape, and ciliated; the flowers in little, round, upright heads; and these, together with the short stalks supporting them, are clothed with long soft wool. The species ought to be arranged near the Cretan Plantain (Plantago Cretica), to which it is nearly allied; but it may be easily distinguished, either by the leaves, or by the heads of the flowers. We have called it PLANTAGO CATANANCHE. Plantago foliis lanceolato-linearibus, ciliatis, pilosis; spicá subrotundá erectá, scapo brevissimo bracteisque lanatis. Catanance prima Dioscoridis. Clus. Plant. Rar. Hist. 2. p. 112. cum tabulá.
- II. A non-descript species of Crow-foot Ranunculus, with slender erect unbranched stems, and single flowers. We have called it RANUNCULUS GRACILIS. Ranunculus caule simplici, gracili, erecto: foliis radicalibus quinquepartitis tripartitisque, laciniis flabelliformibus sinuato-dentatis; caulinis multipartitis laciniis sublinearibus, glabris. Radices tuberosæ, fasciculatæ. Folia rudicalia circumscriptione cordato subrotundå, diametro pollicario vel parum ultra; petioli longi, pilosi: folia caulina duo seu tres sessilia, superiora subtrifida. Caulis pedalis, teres, pubescens. Calyx glaber, reflexus. Corollå magnitudine R. repentis flavå. Petala obovata.
- III. An elegant non-descript species of Trefoil (Trifolium Linn.) This we have named TRIFOLIUM ORNATUM. Trifolium annuum, caulibus ramosis sub-erectis, foliolis obovatis argutissime serratis, mucronatis, glabris ; stipulis oppositis : spicis terminalibus, solitariis, subrotundis, basi bracteatis, apice sterilibus ; bracteis suboctonis, calycis dentibus subulatis æqualibus. Caules striati pilosi. Folia striata vix semipollicaria, summa opposita. Petioli partiales ciliati, brevissimi. Spicæ pedunculatæ foliis breviores. Bractiæ subcordatoovatæ, nitidæ. Calyx corollá dimidio brevior, basin versus pilosus.

IV. A non-

On Wednesday, October the seventh, our CHAP. interpreter, Antonio, returned from Búdrún with

- IV. A non-descript herbaceous Milk-wort (Polygalu Linn.) with racemes of pale blue flowers. We have called it POLYGALA ADSCEN-DENS. Polygala floribus cristatis, rucemis axillaribus, pedunculatis; aliis calycinis corollá brevioribus obtusis nervosis; caulibus herbaceis adscendentibus; foliis lanceolatis acutis, inferioribus obovatis obtusis. Caules quinque ad octo pollices longi, parùm ramosi Folia minutè villosa, lineus quinque ad septem longa, inferiora gradatim breviora et obtusiora. Racemi bructeuti sex ad decemflori. Brueteæ pedicellis longiores, lanceolatæ, mox deciduæ. Flores P.Sibiricæ duplò majores, cærulei.
- V. A non-descript species of Hartwort, (Tordylium Linn.) about a span in height, with leaflets notched at the base, and rounded above with a few blunt teeth on their margin. The Tordylium humile of Mons. Desfontaines is the species which it most resembles; but from this it differs, in not having the leaflets lobed, and by its flowers, which are four times as large as in that species. We have called it TORDYLIUM INSULARE. Tordylium foliis pinnatis, foliis corduto-subreniformibus inciso-dentatis, petiolis pilosis; involueri foliolis subulatis brevibus subguinis; involuelli laciniis ciliatis pedicellos excedentibus; floribus majusculis; seminibus crenulatis.
- VI. A very showy non-descript species of *Allium*: varying from about ten inches to above two feet in height; the leaves very thin and delicate, streaked with about twenty parallel lines, and finely fringed; their breadth from about half an inch to three quarters; the umbel of the flowers straight; nearly hemispherical, with the number of rays varying from eight to about twenty, according to the size and vigour of the plants; the petals, nearly oval, white.
- We have called it ALLIUM PULCHRUM. Allium caule angulato, basi folioso, foliis caule brevioribus lunceolato-oblongis, sub-planis, margine brevissimè ciliatis; umbella luxâ hemispharicu; petalis ovalibus staminibus simplicibus longioribus, majusculis; spathâ monophyllâ ventricusâ acuminato-subrotundá. This species is allied to the Allium Neapolitanum of Cyrilli; to the Allium subhirsutum of Linnaus; and to the Allium ciliatum of Curtis and Sims. From the

CHAP, I.

> Casiot Vessel.

the Governor's chiaoux, in a small caïque, manned by a single family of the Island of Casos, consisting of four individuals; viz. a young widower, his son, his brother, and a very old man his uncle. Antonio had found no vessel that would suit us in the port of Budrún; and was returning in the open boat which conveyed him, when, coming from the harbour, he beheld the Casiot bark, coasting slowly eastward, and within hail. Having boarded this vessel, he found that it was empty, returning to Casos for want of a freight. He easily prevailed upon the poor Casiots to steer for Stanchio, in the hope of being hired by us, and we very gladly availed ourselves of the opportunity. The vessel was old, and the large triangular sails were tattered and rotten. It was, in fact, nothing more than an open boat; a man of middle stature, standing in the hatchway with his feet in the hold, had at least the half of his body above the deck: it was impossible therefore to contrive any thing like a cabin, in which to stand upright; but by

the first it differs in the form of the umbel, which at once distinguishes it : from the two last, the difference consists in the form of the leaves, the few rays which are found in the umbel, the simple sheath, and the large blossoms.

VII. The Purple Orchis, (Orchis Heroïca, nobis). See Vol. III. Chap. V. p. 145. Octavo edition.

clearing and cleansing this place, we found we could obtain a shelter for the night, and during the day we should of course prefer being upon the deck. Landsmen in harbour, especially in fine weather, are easily reconciled to all chances in preparing to go to sea: without further consideration, we hired this vessel at the rate of four hundred and fifty piastres per month, engaging to find our own provisions, and leaving the crew to provide for themselves. They fell to work briskly, preparing their vessel for our reception; and by the next evening, at sunset, having every thing necessary on board, we were desired to embark. Mr. Riley went with us to take leave of the Governor, from whom we had experienced great kindness and civility: the Greek Bishop, and the worthy French Consul, accompanying us to the shore, and taking leave of us upon the deck of our little bark. At eight o'clock we were under weigh: a land breeze drove us smoothly along; and the Casiots began their evening hymn. This reminded us of a Antient passage in Longus¹, who, in the very seas we singing were now traversing, describes a similar custom: "While they rowed, one of the crew

Custom of Vespers.

(1) Longus, lib. iii. Paris, 1778.

VOL. VI.

CHAP. T

D

COS TO PATMOS.

CHAP. " sang to them; the rest, as a chorus, at intervals " joined with him'." The Venetian sailors have a hymn which they sing exactly after the same manner, the crew being all upon deck at the time, and upon their knees². It is, in fact, a very antient custom, and it is still common all over the Mediterranean.

Leria.

The next morning, October the ninth, we found ourselves to be opposite to the small Isle of Leria, bearing s.w. and by w. distant eight miles, the wind being tranquil, and the sea calm³. We

(1)	Οί δε λοιποί, παθάπερ χορός, όμοφώνως	
	Κατά καιρόν της έκείνου φωνής έβόων.	Longus, ibid.

(2) We have preserved the words of a Venetian Hymn, as we heard it sung every evening, when the weather permitted, in the Black Sea, on board the Venetian brig in which we sailed from Russia for Constantinople:

> " O santa Barbara, nostra avocata! Che sei madre de la Maria. Questa nave, l'artilleria, Sempre da voi lascia guardata ! CHOR. O Santa Barbara ! &c.

" O santissimo Sacramento! Jesu Christo, nostro signore ! Qui che guarda tutti l'hore! Qui che salva ogni momento ! CHOR. O Santissimo ! &c."

(3) "Lera is nine leagues N. w. and by w. from Stanchio," Perry's View of the Othoman Empire, p. 482. Lond. 1743.

·I.

ISLE OF LERIA.

saw the monastery and town of *Lera*, as it is CHAP. now called.

This little island has three harbours; and it is said by *Dapper* to produce abundance of the wood of *aloes*, so much esteemed in *Turkey* as a perfume⁴. *Dapper*'s assertion may be doubted; for the enormous price of this wood at *Constantinople* seems to prove that it is not found, abundantly, anywhere so near to that city. The character of the antient inhabitants of *Leria*, who were originally a *Milesian* colony⁵, gave rise to the very antient epigram of *Phocylides*, so often, in after ages, parodied and imitated, but perhaps never with more success than by our illustrious countryman, *Porson*⁶:

Καὶ τόδε Φωκυλιδέω· Λέριοι κακοί· οὐχ ὁ μὲν, ὅς δ' οὐ· Πάντες, πλὴν Προκλέους· καὶ Προκλέης Λέριος.

(4) Dapper Déscription des Isles de l'Archipel. p. 183. Amst. 1703.

(5) Strabon. Geog. lib. xiv: p. 910. Oxon. 1807. Strabo writes the name of this island both Asgen and Asgen.

(6) In the following Epigram upon the *Greek* Scholars of *Germany*, which the author has transcribed from his own hand-writing.

Νήνδες έςτε μέτρωμ, Ξ Τεύτομες, ούχ ο μέμ. ός δ' ού Πάμτες, πλημ ΕΡΜΑΝΝΟς δ δ' Ερμαμμος οφόδρα Τεύτωμ.

> The Germans in Greek Are sadly to seek, Not five in five score, But ninety-five more : All, save only Herman, Aud Herman's a German.

> > D 2

CHAP. At half-past eight A. M. we made the Island of PATMOS¹; and afterwards passing between Leria and Lepsia, SAMOS appeared most beautifully in view, covered by a silvery mist, softening every object, but concealing none. Lepsia is now called Lipso. At eleven o'clock A. M. we entered the port of La Scala², in PATMOS. We were surprised by meeting Arrival at several boats filled with French soldiers, fishing. In order to prevent our caique from being fired at, as a pirate vessel (which she much resembled, and probably had been), we had hoisted an English flag given to us by Captain Clarke, and recommended for our use in the Archipelago. The Frenchmen, seeing this proud distinction upon our humble skiff, called out, by way of taunt, "Voilà un beau venez-y voir ! Le Pavillon Anglois ! Tremblez, Messieurs !" They were much too numerous to venture a reply, if we had been so disposed; and as soon as we landed, we found the quay covered with French privates, among whom were some of the

ī.

Patmos.

^{(1) &}quot;Patmos is six leagues from Lera, N. w. by N." Perry's View of the Levant, p. 483. Lond. 1743.

⁽²⁾ Dapper says it received the name of La Scala from the quay which has been constructed here; but it may have been so called from the steep ascent to the monastery, which begins at the landing-place of this harbour.

inferior officers of the French army. These men CHAP. were a part of the army which had surrendered to our troops in Egypt, on their passage to France. The transport hired for their convey- Critical ance was commanded by an Algerine : this man of a part had put into Patmos, under the pretence of of the French careening his vessel; saying that it was unsafe Army. to continue the voyage until this had been done; but it was feared that he intended to seize an opportunity, after landing these Frenchmen, to escape with the ship and all the booty on board. We had been but a short time on shore, when a petition was brought to us signed by the French officers, stating their fears, and begging that we would represent their case to our Minister at Constantinople. They said they had already removed their trunks, and were resolved to return no more on board the Algerine; the rascally Captain having twice attempted to poison their food. All this was uttered in a very different sort of tone from that in which we had been hailed upon our coming into the harbour, and we entered warmly into their cause. Their situation was, to be sure, critical. They had property belonging to some of the French Generals, besides their own effects; and all the cases containing these things were lying

situation French

CHAP. I.

upon the open quay. They were forced to appoint a regular guard, day and night; hourly dreading, as they told us, a visit from some of . the numerous pirates which swarm around Patmos': besides all this, the mutinous behaviour of their own men made it impossible for them to rely even upon the sentinels set over the baggage, for they were constantly in a state of intoxication with the wine of the island. As Mr. Riley was going to Constantinople, we wrote to the British Ambassador, briefly explaining the event that had taken place: and our letter, as we were afterwards told, procured them another ship. In the mean time, it was necessary to take some immediate step for the security of their baggage. For this purpose we proposed making an application to the monks of the Monastery of the Apocalypse, which is situate two miles and a half from the quay, upon the top of a mountain in the highest part of all the island, close to the town of Patmos. Here it might be secure from pirates; for the building is

⁽¹⁾ Patmos has always been exposed to the attacks of pirates. Tournefort relates, that the town was formerly in the port of La Scala; but that the pirates compelled its inhabitants to abandon it, and to retire to the heights where it is now situate, close to the Monastery of St. John.

strongly fortified, and it is proof against any attack of that nature². A Commissary of the French army proposed to accompany us upon this expedition; and, as the plan was highly approved, we set off, without further delay, for the Convent. The ascent is steep and rugged; but practicable for asses and mules; and upon the backs of these animals we proposed to convey the trunks. When we arrived at the Monastery Monastery, we were quite struck by its size and substantial appearance. It is a very powerful fortress, built upon a steep rock, with several towers and lofty thick walls; and if duly mounted with guns, might be made impregnable. According to Tournefort, it is said to have been founded by Alexius Comnenus, in consequence of the persuasion of St. Christodulus³; but Dapper relates, that the saint himself founded the Monastery, having obtained permission to this effect from Alexius, towards the

of St. John.

CHAP.

I.

end of the tenth century, when he retired to CHAP. Patmos, to avoid the persecution of the Turks'. St. Christodulus had been Abbot of Latros, a day and a half's journey from Ephesus, where he presided over twenty convents². We were received by the Superior and by the Bursar of the Monastery, in the Refectory. Having made known the cause of our coming, we presented to them our circular letter from the Capudan Pasha: this, being written in Turkish, was interpreted by Mr. Riley. After a short consultation, they acquiesced in the proposal made for the French. officers; and agreed to receive the whole of the baggage at the quay, within their walls; also a single officer to superintend the care of it, until a vessel should arrive from Constantinople, or from Smyrna, for its removal. This business being settled, we asked permission to see the LIBRARY, which was readily granted; and while the French Commissary went into the town to hire some mules, the two Caloyers, by whom we had been received, conducted us thither.

Library.

We entered a small oblong chamber, having

(2) Ibid.

Τ.

⁽¹⁾ Dapper. Déser. des Isles de l'Archipel. p. 181. Amst. 1703.

a vaulted stone roof; and found it to be nearly CHAP. filled with books, of all sizes, in a most neglected state; some lying upon the floor, a prey to the damp and to worms; others standing upon shelves, but without any kind of order. The books upon the shelves were all printed volumes; for these, being more modern, were regarded as the more valuable, and had a better station assigned them than the rest, many of which were considered only as so much rubbish. Some of the printed books were tolerably well bound, and in good condition. The Superior said, these were his favourites; but when we took down one or two of them to examine their contents, we discovered that neither the Supe- Ignorance rior nor his colleague were able to read 3. They Monks. had a confused traditionary recollection of the names of some of them, but knew no more of their contents than the Grand Signior. We saw here the first edition of the Anthologia, in quarto, printed at Florence, in capital letters, A. D.

of the

(3) Mons. De Choiseul-Gouffier (Voyage Pittoresque de la Grèce, tom. 1. p. 103.) found only three monks in Patmos who knew how to read. Sonnini speaks of their extraordinary ignorance; but he is mistaken when he affirms that they have no library. "There is no library," says he, " in the Convent ; and of what utility would it be, among people who, for the most part, cannot read." See Sonnini's Travels in Greece, &c. ch. 35. p. 473. Lond. 1801.

MCCCCCCCiv. a beautiful copy. At the extre-CHAP. mity of this chamber, which is opposite to the window, a considerable number of old volumes of parchment, some with covers and some without, were heaped upon the floor, in the utmost disorder; and there were evident proofs that these had been cast aside, and condemned to answer any purpose for which the parchment might be required. When we asked the Superior what they were? he replied, turning up his nose with an expression of indifference and contempt, X sieóyea Qa! It was, indeed, a moment in which a literary traveller might be supposed to doubt the evidence of his senses; for the whole of this contemned heap consisted entirely of Greek Manuscripts, and some of them were of the highest antiquity. We sought in vain for the Manuscript of Homer, said to have been copied by a student from Cos, and alluded to upon a former occasion'. We even ventured to ask the ignorant monks, if they had ever heard of the existence of such a relic in their library. The Bursar^{*} maintained that he

Manuscripts.

I.

⁽¹⁾ See Vol. III. Ch.VII. p. 263. Octavo Edition.

⁽²⁾ Paul Ricaut has well described the state in which we found the Patmos Library; and also mentions this office of Bursar, whose business it is to take care of the books. " Every monastery hath its library of books, which are kept in a lofty tower, under the custody

had, and that he should know the Manuscript if CHAP. he saw it³. Presently he produced from the

custody of one whom they call Excuedulara, who is also their steward, receives their money, and renders an account of all their expenses : but we must not imagine that these libraries are conserved in that order as ours are in the parts of Christendom; that they are ranked and compiled in method, on shelves, with labels of the contents; or that they are brushed and kept clean, like the libraries of our Colleges: but they are piled one on the other, without order or method, covered with dust, and exposed to the worm." Ricaut's State of the Greek and Armenian Churches, p. 260. Lond. 1679.

(3) This Manuscript was afterwards discovered by Mr. Walpole, in the hands of a schoolmaster, at the Grotto of the Apocalypse, below the Monastery. Mr. Walpole's observations upon this Library are particularly interesting; because they prove that one of the Manuscripts brought away by the author was known to Villoison; and that the removal of the rest had excited some sensation in Greece, as appears by the inscription over the door.

"There was at Patmos, for many years, a school frequented by the Modern Greeks, which possessed a higher reputation than any other in the Levant. This has now yielded the pre-eminence to one established at Kidoniais, near Smyrna. A Greek in the island of Antiparos, who accompanied us to the grotto there, told me he had heen educated at Patmos; and repeated to me the beginning of the Romance of the Æthiopics of Heliodorus. During our stay at Patmos, we visited the lower Monastery, where the grotto is shewn in which St. John wrote the Apocalypse : it is called Guerangiorn. Here is also a small school : we found the schoolmaster reading a manuscript Homer. with some notes; it was written on paper; and did not appear of great date.

" The Monastery on the summit of the island is a very handsome building : from it, we had a most extensive view over the Archipelago. and some of the Greek islands. In the two visits I made to Patmos. I was not permitted to examine, as I wished, the collection of books and papers in the Library of the Monastery of St. John. There was no Greek in the place from whom I could obtain any satisfactory information. On the shelves, in compartments, are arranged Theological

> Theological works: these, *Villoison*, in his visit to the island, found less injured than the manuscripts of classical writers. The monks told him, that, twenty years before his arrival, they had burnt from two to three thousand manuscripts; *duo vel tria millia circiter codicum combussisse*. Of these *reliquiæ Danadm*, a copy of the LEXICON OF CYRILL had escaped the flames, and was preserved by the Abbot.

> "On one side of the Library is a confused heap of what appears, for the most part, to be manuscript, consisting both of vellum and paper. Here, if an accurate search were made, might be found probably many literary fragments of importance. Over the door of the Library are the following lines; *intended*, doubtless, for hexameter verses: they were placed there, as the date informs us, in 1802.

> > Διῦς[°], «Απο, χιϊνται ὄσαι φαιινα) χειεόγραφοι βίβλοι, [°]Ανδς) ἐὰ Φέρτεραι πινυτῷ χρυσίου δοχίουσαι[°] Ταῦτ[°] ἄρα τήριε Φύλαξ σεῖο μᾶλλον βιότοιο, Τῶν δόμος οὕνεχα ὅς νῦν τοι γίνατο Φεγγόβολος γε. ἐπὶ ἔτους Αωβ΄ Μήνος Αὐγούστου. ΄

Walpole M.S. Journal.

The inscription over the door of the Library has been added since the author's visit; and the Lexicon of Cyrill, mentioned by Villoison, is the identical Codex he bought of the Superior, and brought away. For a more detailed account of the MSS. of Greece, the Reader is referred to some remarks by Mr. Wulpole, in the beginning of this Section.

(1) In the First Edition of this Part of the Author's Travels, he had inadvertently written the name of this city *Nazianzen*; for which he was reproved by a writer, in the *Quarterly Review*, maintaining that as the ninth century. The cover and some of the outer leaves had been torn off; but the rest was perfect. The ink had become red; a circumstance alluded to by *Montfaucon*, in ascertaining the age of *Greek* Manuscripts; and the writing throughout manifested an equal degree of antiquity². What was to be done? To betray any extraordinary desire to get possession of these treasures, would inevitably prevent all possibility of obtaining any of them. We referred the matter to Mr. *Riley*, as to a person habituated in dealing with knavish *Greeks*; and presently such a jabbering took place, accompanied with so many significant shrugs, winks, nods, and grimaces, that it was plain something

(2) "Quod autem jam in vetustioribus manuscriptis Græcis conspicimus atramentum, a prisco nigrore multum recessit: nee tamen omnino flavum languidumque evasit; sed fulvum rutilumque manet, ut persæpe a minii colore non multúm recedat. Id antem observes in Codicibus permultis a quarto ad duodecimum usque sæculum." *Montfaucon. Palæog. Græc. lib.* i. c. 1. p. 2. Paris, 1708. Discovery

of the Patmos Plato.

CHAP. like a negotiation was going on. The author, meanwhile, continued to inspect the heap; and had soon selected the fairest specimen of Grecian calligraphy which has descended to modern times. It was a copy of the twenty-four first Dialogues of Plato, written throughout, upon vellum, in the same exquisite character; concluding with a date, and the name of the calligraphist. The whole of this could not be ascertained at the instant'. It was a single

> (1) This Manuscript, after the author's return to England, remained in the hands of his friend, the late Professor Porson, until his death. It is now, with the other. MSS. from Patmos, &c. in the Bodleian Library at Oxford. For further particulars concerning it, the reader is therefore referred to the Catalogue of all the MSS. brought from Greece by the author, written by the celebrated Professor Guisford, and printed at the Clarendon Press in 1812; a work which has impressed every scholar with the most profound admiration of the writer's learning and great critical acumen. Reference may also be made to the observations of ONE, who could best have appretiated Professor Gaisford's surprising talents; namely, of the illustrious Porson himself; as they are now published in his Adversaria, by his successor Professor Monk, and the Rev. Charles Blomfield ; the learned editors. respectively, of Euripides and of Æschylus. To mention every person who has contributed to the celebrity of this inestimable volume. would be to enumerate the names of almost all the eminent Greek scholars in the kingdom. Of the importance of the marginal notes. and the curious fragments they contained from Greek Plays that are lost, together with a variety of particulars relating to the other Manuscripts here mentioned, the author does not intend to add a syllable : it were presumptive and superfluous to do so, after the observations already published upon the subject. His only aim is, to give a general narrative of the manner in which he succeeded in rescuing these Manuscripts from rottenness and certain destruction in the Monastery.

volume in folio, bound in wood. The cover CHAP. was full of worms, and falling to pieces: a paper label appeared at the back, inscribed, in a modern hand, Διάλογοι Σωπράτους: but the letters of Plato's name, separated by stars; appeared very distinctly as a head-piece to the first page of the Manuscript, in this manner:

Π*Λ*Α*Τ*Ω*Ν*Ο*C

A postscript at the end of the volume stated that the Manuscript had been "written by John the " Calligraphist, for Arethas, Dean of Patræ, in " the month of November 896, the 14. year of the " Indiction, and 6404. year of the world, in the reign " of Leo son of Basilius, for the sum of thirteen " Byzantine Nummi," about eight guineas of our money. The Manuscript mentioned by Dor ville on Chariton² is one year older.

The author afterwards discovered a LEXICON Discovery of other OF ST. CYRILL of Alexandria, written upon valuable paper, without any date, and contained in a volume of Miscellanies. He also found two small volumes of the PSALMS and of GREEK HYMNS, accompanied by unknown characters, serving as antient Greek musical notes. They are

(2) See Dorville on Chariton, pp. 49, 50.

47

I.

CHAP. the same which the Abbé Barthelemy and other writers have noticed; but their history has never been illustrated. Besides these, he observed, in a Manuscript of very diminutive size, the curious work of Phile upon Animals¹, containing an account of the Ibis, bound up with twenty-three other Tracts upon a great variety of subjects². After removing these volumes from a quantity of theological writings, detached fragments, worm-eaten wooden covers (that had belonged to books once literally bound in boards), scraps of parchment, Lives of Hermits, and other litter, all further inquiry was stopped by the promptitude and caution of Mr. Riley, who told us the Superior had agreed to sell the few articles we had selected, but that it would be impossible to purchase more; and that even these would be lost, if we ventured to expose them to the observation of any of the inhabitants of the town. Then telling us what sum he had agreed to give for them, he concealed two of the smaller volumes in the folds of his Turkish habit, entrusting to the honour of the two Caloyers the task of conveying the others

⁽¹⁾ Τοῦ Φιλη περί ζώων ίδιότητος δια στίχων.

⁽²⁾ See Professor Gaisford's "Catalogus sive Notitia Manuscriptorum," &c. p. 62. Oxon. 1812.

on board our vessel in the harbour. Upon this CHAP. honour, it must be confessed, we did not rely with so much confidence as we ought to have done; but as there was no other method which promised any chance of success, we were forced to comply; and we left, as we believed, the most valuable part of our acquisition in very doubtful hands. Just as we had concluded this bargain, the French Commissary returned; and finding us busied in the Library, afforded an amusing specimen of the sort of system pursued by his countrymen, upon such occasions. " Do you find," said he, " any thing worth your notice, among all this rubbish?" We answered, that there were many things we would gladly purchase. "Purchase!" he added, "I should never think of purchasing from such a herd of swine: if I saw any thing I might require, I should, without ceremony, put it in my pocket, and say, Bon jour !"

After this, some keys were produced, belonging to an old chest that stood opposite to the door of the Library; and we were shewn a few antiquities which the monks had been taught Manuscript in to consider as valuable. Among these, the the handwriting of first thing they shewed to us was AN ORIGI-Alexius. NAL LETTER FROM THE EMPEROR ALEXIUS

E

VOL. VI.

CHAP. COMNENUS, concerning the establishment of their Monastery, inscribed upon a large roll, and precisely corresponding, in the style of the manuscript, with the fragment preserved by Montfaucon, in his Palæographia¹. Besides this, were other rolls of record, the deeds of succeeding Emperors, with their seals affixed, relating to the affairs of the Convent. ' We calculated the number of volumes in the Library to be about a thousand; and of this number, above two hundred were in manuscript. After we had left the Library, we saw, upon a shelf in the Refectory, the most splendid Manuscript of the whole collection, in two folio volumes, richly adorned: it was called the THEOLOGY OF GREGORY OF NAZIANZVS², and purported to be throughout IN THE HAND-WRITING OF THE

> (1) "IMPERATORIS GRÆCI EPISTOLE INSIGNE FRAGMENTUM." See Montfaucon, Palaog. Grac. p. 266. Paris, 1708. This Epistle is believed by Montfaucon (from the remains of the Signature #### TANTINUS) to have been written in the ninth century," by Constantinus Copronymus, to Pepin, the French king. The style of the writing very much resembles that which is now lying in the Library at Patmos.

> (2) Cave mentions a work of Gregorius Nazianzenus under this title : " De Theologia Orationes V. contra Eunomianos et Macedonianos :" (see Scriptor. Ecclesiast. Hist. Lit. Sæculum Arianum, p. 200. Lond. 1688.) but the Patmos MS. being in two large, folio volumes, in all probability contains other of Gregory's writings.

I.

EMPEROR ALEXIUS'. Nothing could be more beautiful. As a singular circumstance, it may also be mentioned, that we saw upon the same shelf, and by the side of this, a Manuscript of the writings of Gregory's greatest admirer, ERASMUS.

The Capudan Pasha's letter enabled us to order bread from the island for our voyage; and this the monks promised to see provided. The State of the inhabitants import wheat from the Black Sea; and they have twelve small vessels engaged in commerce, with which they trade to different ports in the Euxine and to the Adriatic, bringing corn for their own use, and also carrying it as far as Ancona in Italy. In Tournefort's time, there were hardly three hundred men upon the island, and at least twenty, women to one man. The population remains nearly the same as it was

Island.

. (3) This MS. is noticed in the Patmos Catalogue (See the beginning of thisvolume, p. 21.); and the same circumstance is related of the hand-writing of the Emperor Alexius : it is there called, in modern Greek, " A work of Gregory the Theologian, which is in the hand-writing of the Emperor Alexius Comnenus ; his own hand-writing :". Ipnyopiou Tou Ouohoyou "ira Bishler, το όποιον είναι γράψιμου του βασιλίως Αλιξίου του Κομνηνου του ίδιου you figure. There were, however, two Calligraphists of this name Alexius ; the one wrote the Lives of the Saints in 1292; the other, a MS. of Hippocrates in the fourteenth century. See Montfaucon, Pal. Gr. lib. i. p. 94. Par. 1708.

E 2

51

CHAP. I.

CHAP. when he wrote; for, as it is observed by Sonnini¹, "While the monasteries swarm with sluggards, the fields become deserts; and population is consequently diminished. Yet, in the neighbouring isles, Patmos is described as the University of the Archipelago: it is hither that the Greek families send their sons to be educated, by a set of monks unable to read their own, or any other language. After we left the Monastery, we paid a visit to Mr. Antonio Gilly, the Prussian Consul, of whom we purchased several Greek medals. Among these, were a Antient Medals. bronze medal of Eleusis, representing Ceres in her car, drawn by two serpents, with a sow on the reverse; and two beautiful gold medals of Lysimachus and of Philip, in as high a state of preservation as if they had been just issued from the mint. The freshness of their appearance might induce a suspicion of their being a modern fabrication, if it were not a well-known fact that to imitate the best coinage of Thrace and Macedonia is impossible; and therefore, in such cases, we may defy imposture. The present price of Greek medals, throughout the Levant, is generally the same; unless they be found, as it

(1) Travels in Greece, &c. p. 473. Lond. 1801.

52

sometimes happens, in the hands of trading antiquaries and ignorant pretenders to a knowledge of antiquity, when the most absurd and exorbitant prices are set upon them. The usual rate of selling them, among the poor artificers in gold and silver found in almost all the towns, is this: for gold medals, twice their weight in Venetian sequins; for silver, from two piastres to five, or six, according to the size; and for bronze², about a pará for each medal. Hence it must be evident, that, with the exception of the silver (which are generally of the highest antiquity, and always estimated below their present price in England), the medals of Greece may be purchased cheaper in London than in the Levant. Indeed, the Grecian copper coinage is now considered as being of such modern date, that it is little valued by collectors of Greek medals'. Roman copper is found in great abundance; and among this may be easily obtained many rare and valuable coins, illus-

(2) The author has generally used the word *branze*, instead of *brass*, as applied to Grecian antiquities; and for this reason: antient branze consists of *copper* containing about ten per cent. of *tin*, and therefore differs from brass, which is a compound of *copper* and *zinc*.

(3) It has been sold in London for a price equivalent to the weight of the metal.

CHAP. I.

54

medals were struck during the period in which they were governed by their own laws. No medal of Patmos has been discovered; neither is it likely that any ever did exist, as the island was hardly inhabited when the Romans made it a place of exile. The gold medals sold to us by the Prussian Consul were, in all probability, not found upon the island, but brought by its trading vessels: it is a common occurrence to meet with such antiquities in the hands of Greek sailors, who collect them for sale. The medal of Lysimachus exhibited, as usual, a fine portrait of the deified Alexander; whose image, "expressed on gold or silver," was so long considered as propitious to its possessor'. Concerning the medals of Lysimachus, and this image, the author must refer to a former work, rather than repeat what has been already published²; but with regard to the gold medals of Philip, bearing the legend \$1AIPPOY, so much doubt has generally prevailed, that it may be proper to add a few words upon the subject. It has been usual

 (1) "Dicuntur juvari in omni actu suo qui Alexandrum expressum vel auro gestitant vel argento." Trebell. Pollio, Quiet. xiii. p. 1090. Hist. Rom. Script. apud H. Steph. 1568.
 (2) See "Tomb of Alexander." Camb. 1805.

to attribute them to PHILIP THE SECOND, the CHAP. father of Alexander the Great, simply from the circumstance of the gold mines being discovered during his time, and of which he was the possessor3. There is, however, much greater probability that they were struck during the reign of PHILIP ARIDÆUS, and for the following reasons: first, that some of them have the legend $BA\Sigma! \land E\Omega\Sigma \phi \land \square POY$, a title not found upon Greek medals before the time of Alexander the Great⁴; secondly, that in these medals the art of coining was carried to a degree of perfection unknown in any former period, and to which it never afterwards attained. The medals of the Macedonian kings before the age of Alexander have no resemblance, whether in form, in weight, in substance, or in the style of their fabrication, to those which bear the name of PHILIP: the only examples to be compared with them, in beauty and perfection of workmanship, are the medals of Lysimachus; and even these are in a certain degree inferior. Many of the medals of Alexander the Great,

(3) Pellerin Recueil de Médailles de Rois, p. 9. Paris, 1762.

(4) Hardouin and Frælich ascribed all the medals with this legend to PHILIP ARIDEUS. Eckhel maintained a different opinion. See Doctrina Num. Vet. Pars I. vol. II. p. 94. - Vindobon.- 1794. CHAP. although remarkable for boldness of execution and for the sharpness of the die, betray something of the rude style discernible in the coinage of his predecessors, although the art were subsequently carried to such an extraordinary point of perfection during the reigns of Lysimachus and of Philip Aridæus. In order to form a correct opinion upon this subject, and to be convinced that the gold coinage now alluded to did not belong to the age of Philip the Second, something more is requisite than the examination of a particular medal: it is necessary to view the whole series of the coins of the Macedonian kings, and, by observing the changes introduced into their mint, to become acquainted with the style which denoted the progress of the art at any particular period; from the unfigured reverses and indented squares of Alexander the First and of Archelaiis, struck nearly five centuries before the Christian æra, to the exquisite perfection of design and the elegant fabrication visible in the medals of Macedon and Thrace, under the immediate. successors of Alexander the Great.

> A few of the inhabitants came to the Consul's house, to see us. Nothing can be more remarkable than the situation of the town, built upon

the edge of a vast crater, sloping off, on either CHAP. side like the roof of a tiled house. Perry has compared it to "an asses back;" upon the highest ridge of which stands the Monastery'. The inhabitants, therefore, have no space for exercise, either on foot or on horseback: they can only descend and ascend by the rugged path that leads to the harbour. On one of the towers of the Monastery, a look-out is regularly kept for the pirates ; the view here Extensive being so extensive, that no vessel can approach the island without being perceived. We returned, to enjoy the prospect from this place. The sight was extremely magnificent; as may be conceived by any reader who will judge from the appearance exhibited by the island itself, and by this Monastery, at the distance of six leagues at sea². We commanded the whole Island of Amorgos, which is nearly forty miles from the nearest point of Patmos'; and were

Prospect.

(1) Perry's View of the Levant, p. 483. Lond. 1743. Tournefort makes the same comparison with reference to another island, that of St. Minas : " Elle est faite en dos d'Ane." Voyage du Levant, tom. 11. Lett. x. p. 150. Lyon, 1717.

(2) See the former Section, Vol. 11. of the Quarto Edition, Plate facing p. 194.

(3) Thirteen leagues, according to the Chart of D'Anville, published at Paris, October 1756.

Holy Grotto.

As we descended from the great Monastery of St. John, we turned off, upon our right, to visit a smaller edifice of the same nature. erected over a cave, or grot, where the Apocalupse, attributed to that Evangelist, is said to have been written. It can hardly be considered as any other than a hermitage, and it is entirely dependent upon the principal Monastery. As to the cave itself, whence this building derives its origin, and to which it owes all its pretended sanctity, it may be supposed that any other cave would have answered the purpose fully as well: it is not spacious enough to have afforded a habitation even for a hermit; and there is not the slightest probability that any thing related concerning it, by the monks, is founded in truth. The reader will find a very. accurate representation of it in Tournefort', shewing the crevices in the stone through which it is pretended that the Holy Spirit conveyed its dictates to the Apostle. It affords another striking proof, in addition to many already enumerated, that there is no degree of absurdity

(1) Voyage du Levant, tom. II. p. 145. à Lyon, 1717.

too gross for the purposes of altarage and superstition. There seemed to be something like a school held in the building erected about this cave; but the only monk who shewed the place to us, and who appeared to superintend: the seminary, was not much better informed than his godly brethren in the parent monastery :

Descending from this place towards the Port Dinner of La Scala, we were met by several of the the French Frenchmen, coming with the Commissary to invite us to dinner: so grateful were they for the attention paid to their request, and the consequent safety of their baggage, that each seemed to strive with the other who could render us the greater civility. We accepted their invitation; and were conducted into a warehouse near the quay, where a large table was prepared, with fish, wine, and biscuit. Here we found several French women, conversing with their usual gaiety ; and we all sat down During dinner, the conversation together. turned upon the events that had happened in.

(2) Mr. Wulpole, who arrived afterwards, has mentioned, in his Journal, that the schoolmaster was able to read. He found him reading a Maouscript of the Odyssey of Homer. See the Extract from. Mr. Walpole's Journal, in a preceding page of this Chapter.

Officers.

Barthelemy.

Egypt; and, as each began to boast of his personal prowess in the late campaign, some contradictions took place, and a most turbulent scene of dispute ensued. In the midst of this, a figure entered the warehouse, whose appearance silenced the whole party, and was particularly gratifying to our curiosity. It was Barthelemy, the famous Greek pirate, who engaged in the French service under Buonaparté, and was chief of a regiment of Mamalukes in Egypt. His figure was uncommonly martial and dignified: he wore the Mamaluke dress, and carried a large knotted club as a walking-staff. Placing himself at the table, he began to complain, in a very hoarse voice, of the treatment he had experienced, which he stated to be contrary to the most solemn stipulations; contrary to his deserts; and highly dishonourable to the French army, for whom he had fought so many battles, and made such important sacrifices. They made free, it seemed, with his women; of whom he had many, that he was conveying, as his property, to France. One or two of the principal persons present endeavoured to pacify him, by the assurance that he should not be molested in future; and filling a large goblet of wine, proposed to him to drink "Success to the Republic, and the liberation of Greece." The

wary old Corsair did not appear to relish the CHAP. toast; and had probably, by this time, both _____. heard and seen quite enough of *Gallic* emancipation.

We remained near a week at Patmos. The next day we revisited the Monastery, and were again admitted to the Library. We found it would be impossible to purchase any other Manuscripts than those for which we had stipulated; for upon this, and every subsequent occasion, some of the inhabitants of the town thought proper to accompany us into the Convent. The Superior took occasion to assure us, that both he and the Bursar were willing enough to part with the x sie oyea pa; but that if it were known to have brought them any gain, the people of Patmos, acting as spies for the Capudan Pasha, would make it the cause of a very heavy imposition upon the Monastery. We could not procure a Catalogue, either of the Manuscripts or of the printed books'.

(1) The Marquis of Sligo afterwards visited Patmos, and obtained the Catalogue alluded to in a preceding Note: it is written in modern Greek, and contains a List of all the Books in the Patmos Library. This Catalogue his Lordship kindly presented to the author. Nothing is said in it as to the editions of the different authors, nor a syllable concerning the age of the Manuscripts: the reader is however referred to it, for more detailed information concerning the latter; and to the Dissertation by Mr. Walpole, in the beginning of this Volume.

I. Women of the Island.

CHAP.

This day we dined with the monks, and afterwards went again into the town. The women of the island, here collected as it were upon a single point, are so generally handsome, that it is an uncommon sight to meet with any who are otherwise. Their houses are kept very clean: it is customary with them to raise their beds at least ten feet from the floor, and they ascend to them by steps. Dapper mentions several villages in Patmos, existing at present only in his work'. The island produces very little wheat, and still less of barley: even the corn consumed in the Monastery is brought from the Black Sea. There are several bells at the Monastery, which the monks are frequently ringing. The enjoyment of this noise is considered as a great indulgence; bells being prohibited by the Turks. Dapper says, that, excepting upon Mount Libanus, Patmos is the only place in all the Turkish empire where bells may be heard ": in this he is, however, mistaken, for Naxos has the same privilege.

The whole of Sunday, October the eleventh, was passed in great anxiety, being the day on which the Superior of the Monastery had

(2) Ibid. p. 180.

62

Bells.

⁽¹⁾ Dapper, Déscription des Isles de l'Archipel. p. 181. Amst. 1703.

engaged to send the remaining Manuscripts CHAP. purchased by the author from the Library. Mr. Riley had left Patmos for Constantinople; and we began to fear, as the evening approached, that his absence might become the pretext for a breach of, contract on the part of the monks. Towards sun-set, being upon the deck of our caïque, and looking towards the mountain, we discerned a person coming down the steep descent from the Monastery towards the port: presently, as he drew near, we perceived that he; had a large; basket upon his head, and that he was coming towards the quay, opposite to the spot where our vessel was at anchor. Upon his arrival, we saw him making signs for a boat; and we sent to him the little skiff belonging to our caïque. As he came alongside, he said, Stratagem aloud, that he had brought the bread ordered ing the for us in consequence of our letter from the nuscripts. Capudan Pasha; but coming upon deck, he gave a significant wink, and told us the Superior desired that we would "empty the basket ourselves, and count the loaves, to see that all was right." We took the hint, and hurried with the precious charge into our birth; where, having turned the basket bottom upwards, we found, to our great joy, the Manuscript of PLATO, the POEMS OF GREGORY, the work of

Greek Ma-

CHAP. PHILE, with the other Tracts, the two volumes containing the *Greek* Musical Notes, and the volume of Miscellanies containing the LEXICON oF ST. CYRILL: these we instantly concealed beneath a mattress in one of our cots; and making a grand display of the loaves, returned with the basket upon deck, giving a handsome present to the porter, and desiring he would inform the Superior, with our most grateful acknowledgments, that "all was perfectly right." Having set him again on shore, we gave orders to our Captain to have every thing ready for sailing the next morning, and to stand out of the port as soon after sun-rise as possible; intending to leave Patmos.

> In this design we were, however, disappointed; but as the delay which ensued gave us an opportunity of discovering some curious geological phænomena, we had no reason to regret that we were thus detained.

Fruitless attempt to leave the Island. At seven o'clock the next morning, the wind served, and we hoisted sail. Steering *east* out of the harbour, and then putting the head of our caïque towards the *north*, we endeavoured to double the *north-eastern* point of the island. *Tournefort*, who is always accurate, published,

a century ago, a better map of Patmos than can be found in any other work¹. Such is often the inaccuracy of Dapper, notwithstanding the industry shewn in his compilation relative to the islands of the Archipelago, that he describes the harbour of La Scala as on the western side of the island, opposite to the Isle of Naxos*; perhaps confounding it with Tournefort's Port de Merica. PATMOS has many ports; and from this cause it is so much infested by pirates, who resort to the port of La Scala to careen their vessels, and for fresh water. During the last war maintained by the Venetians against Candia; La Scala was the wintering-place of their fleet: there are many ruined buildings near the quay. The most contradictory accounts have been published of the island; some describing it as the most barren rock of the Archipelago', and others

(1) See the Vignette to this Chapter, taken from the edition of Lyon, 1717, tom. II. p. 140; and engraved with little addition.

(2) "Le meilleur port de cette île et tout l'Archipel est au devant de la ville de Patino, du côté d'occident, vis-à-vis de l'île de Naxos. Il est généralement connu parmi les mariniers sous le nom de La Scala." (Déscription des Isles de l'Archipel. p. 179. Amst. 1703.) To such mistakes a compiler may be liable; but when he undertakes to explain the legends upon Greek medals, the reader is little prepared for an interpretation like the following. "KOINONKYTIPION, c'est à dire, Conon des Cypriens. Ce Conon étoit apparemment le fondateur du temple"!!! Ibid. p. 523.

extolling its fertility'. From all that we could CHAP collect upon the subject, it is as capable of repaying the labours of husbandry as any other of the neighbouring isles, were it not for the danger to which property is exposed, from the continual incursions of the pirates. Its harbours render it an important station, as a place of commerce: but the circumference of the whole island does not exceed eighteen miles, although, according to Pliny, it be equal to thirty². It seems to have been hardly known before the Christian æra. Strabo merely notices its situation as one of the Sporades, near to Amorgos, Lebinthus, and Leria'.

View of Samos.

As we sailed to the northward of the island. we were surprised to see Samos so distinctly in view. It is hardly possible that the relative situation of Samos and Patmos can be accurately laid down in D'Anville's, or any more recent chart; for keeping up to windward, we found ourselves to be so close under Samos, that we had a clear view, both of the island and of the

ISLE OF SAMOS.

town⁴. This island, the most conspicuous ob- CHAP. ject, not only of the Ionian Sea, but of all the Ægean, is less visited, and of course less known, than any other: it is one of the largest and most considerable of them all; and so near to the main land, that it has been affirmed persons upon the opposite coasts may hear each other speak³. The generality of Greek authors describe its circumference as equal to eighty-seven and a half of our miles. Strabo considers it as somewhat less: but its surprising elevation and relative position, with regard to the lower islands of Fourni and Nicaria, make it a landmark all over the Archipelago. According to Constantine Porphyrogenitus any very lofty place was called Samos⁶. The name of KATABATH was antiently given to the terrible rock which forms the cape and precipice upon its western side, as collecting the clouds, and generating thunder: Jupiter the Thunderer being also called KaraBárns Zeús⁷. One of the monasteries is

(4) The relative position of these islands seems to be more accurately delineated in the old Map of ANTIENT GREECE, by William Delisle, dated Paris, October 1707.

called Παναγία Beorda, Our Lady of the Thunder. CHAP. There are four nunneries upon the island, and above three hundred private chapels; yet the population does not exceed 12,000 men; which is explained by Tournefort, who says, that the island is entirely in the hands of churchmen, possessing seven monasteries. The swarm of Caloyers and Greek Papas have made a desert of this fine island; where all the qualification necessary to become a priest, and live by the industry of others, is the talent of being able to repeat mass from memory. The Bishop of Samos, who is also Bishop of Nicaria, enjoys an annual income of two thousand crowns; and derives, besides, a considerable revenue from the important services he renders to the islanders, in blessing for them their water and their cattle in the beginning of May. All the produce of the dairies on that day belongs to him: he has also two beasts out of every herd¹. In such a state of affairs, we cannot wonder at the change that has taken place between the antient and the modern population of Samos: its fertility in former ages made it the subject of proverbial

Pharnutus in Jovis cognominibus, speak of Jupiter Karashisns, who darts the thunder. See also Tournef. Voy. du Lev. tom. II. p. 105. Lyon, 1717; whence this note is taken.

ISLE OF SAMOS.

admiration and praise^{*}. It is related in Athenæus, that the fruit and rose trees of the island bore twice a year³. Tournefort says, that Samos is infested with wolves; and that tigers sometimes arrive from the main land, after crossing the little Boccaze⁴; thereby confirming an observation made by the author in the former section, with regard to the existence of tigers in Asia Minor.

Passing across the great *Boccaze*, between Samos and Icaria, we were much struck by the extraordinary intensity of the deep blue colour of the sea; and this, which is as much a distinguishing characteristic of the Archipelago as the brightness of its sky, has been noticed by no writer, excepting our enchanting bard, whose poems are now so deservedly the theme of general praise⁵.

As evening drew on, we took the bearings of

Fourni N. Samos N. N. E. Asiatic Coast E. N. E. La Scala, Patmos Port. s. E. Groupe of small Isles . s. and by w. Island called Anguaro . s. w. Amorgos S. w. and by w. Naxos w. and by s. Cape of Icaria . . . N.w. and by w. & w. N.w.

Whenever it is practicable to make these observations at sunset in the Archipelago, surrounded as a vessel always is by land, they ought to be carefully noticed.

After sunset, we were becalmed off the Point of *Icaria*; and remained, during part of the night, in a state of great apprehension, owing to the fears of our mariners with regard to the pirates. Some fires were exhibited on shore; first one, and then another above it, until we saw five burning at the same time. These our Captain maintained to be signals made by corsairs on the island, who were collecting to attack our vessel; consequently, we extinguished every light on board, and began to row with all the energy in our power, drawing off towards

5

NAXOS. Icaria is at present one of the grand CHAP. resorts of these predatory rovers, who are always upon the watch for ships passing the Boccaze of Samos. Small vessels, unfortunately becalmed near to their haunts, have but little chance of escaping. Icaria is at present hardly known: it once gave name to the Icarian Sea', and had two towns in the time of Pliny^{*}. These must have been the small towns mentioned by Strabo', of Enoe, and Drepanum; called, in the Doric dialect, Drecanum. No traveller has sought for any antiquities upon Icaria; yet we are further informed by Strabo*, that it had a temple of Diana, called Tauropolium; and Goltzius has preserved a medal of the island, with the legend IKAPION, representing Europa passing the sea upon a bull, with the effigy of Diana, armed with a bow, and accompanied by a hound, upon the reverse. It received the name of Icaria, from the story of the flight of Icarus from Crete, whose body, fabled to have been cast upon this island, after falling into the Ægean.

RETURN TO PATMOS.

CHAP. was buried by Hercules¹; and this antient name it retains to the present day'. The Italians, but more especially the French, have introduced a number of appellations for the islands of the Archipelago, which do not exist among the Greeks: thus Icaria has been often called Naccari; Cos, Stanchio; and Crete almost always bears the name of Candia. Our Casiot mariners, in their common conversation, called these islands, sevefally, Icaria, Cos, and Crete; never using the words, Naccari, Stanchio, and Candia,

> After labouring for several hours, the wind began to come in squalls from the south-west, directly contrary to our course for Naxos; the sky at the same time lowering, with flashes of lightning, to windward; a never-failing indication of violent gales in these seas. Our Captain proposed that we should run for the first port on the western side of Patmos: to this we gladly consented; and especially because he declared himself to be well acquainted with the entrance to a small harbour on that side of the island. As the daylight began to appear, we found ourselves close under some very high

Port of Patmos.

(2) Tournefort made the same observation : " Nicaria n'a pas changé de nom, elle s'appelle Icaria, tout comme autrefois." Voy. du Lev. tom. II. p. 96. Lyon, 1717.

⁽¹⁾ Pomp. Mela, ii. cap. 7. Ptolem. 5. cap. 2. Strab. ubi supra.

cliffs, in the face of which appeared a dark CHAP. chasm, the narrow mouth of this port. Through this passage we entered; and, having brought our vessel to anchor, perceived that the harbour in which we were now stationed was opposite to that of La Scala, being separated from it only by a small isthmus. It proved to be a fine, clear day. The mercury in Fahrenheit's thermometer stood, at noon, at $75\frac{1}{2}$. Soon after coming to anchor, the author landed, with a view of examining the cliffs; as the ports of the island have the appearance of craters, and substances resembling lava are common among the fragments of its rocks. The Monastery of St. John is situate upon the highest verge of a crater of this description; and the harbour of La Scala owes its origin to another. Perhaps there is not a spot in the Archipelago with more of the semblance of a volcanic origin than Patmos. The cliffs exhibit no form of regular strata, Geological but one immense bed of a porous black rock, in Phan which are numerous nuclei of a white colour, as large as a pullet's egg, in the form of crosses. Those crosses are, of course, considered by the ignorant inhabitants as so many miraculous apocalyptical types: and it is singular that the monks have not, as is usual in such cases, some marvellous tale to relate of their origin. The

73

CHAP. rock itself, upon a nearer examination, proved - to be a very curious porphyry: the nuclei were all of them intersecting crystals of feldspar, imbedded in decomposing trap¹. Among the geological phænomena of the Archipelago, it is perhaps impossible to point out any that are more worthy of observation than those which are exhibited in the cliffs surrounding this remarkable harbour; and there has never been exhibited specimens of porphyry where the crystals of feldspar are in any degree comparable in size with those which are now mentioned^{*}.

> (1) We succeeded in detaching some of those twin crystals, tolerably entire : their intersection had taken place obliquely in the direction of their lateral planes, the major diameter of each crystal being parallel to that of its associate. Owing to this intersection, the appearance of a cross was exhibited whenever the nuclei, by weathering, had been worn away transversely, so as to become level with the superficies of the rock in which they were imbedded. This relative position and their colour give them some resemblance to leucite; differing from leucite, otherwise, in the size and shape of the crystals. Leucite is, however, so nearly allied to feldspar, that were it not for the very minute portion of lime which is found in the latter, their chemical constituents would be nearly the same, and in the same proportions; and possibly the double cleavage observed by Haūy in the former, which caused him to bestow upon it the name of amphigene, may be owing to some circumstance of intersection which so commonly characterizes the crystals of feldspar. At all events, it may be proposed as a mineralogical query, "Whether, if leucite be found before it has sustained the action of fire, it do not prove to be a variety of Adularia ?"

> (2) Martin Crusius, in his annotations upon an Epistle of Macarius (abbot of Patmos) to the Greek Patriarch, in 1579, has cited a work

printed

This day, Tuesday, October the thirteenth, we observed, in a small garden near this harbour, a Karob-tree (Ceratonia Siliqua) in bloom. A few shrubs grew among the rocks, but we could procure no specimens of plants worth collecting for our herbary. The island abounds in goats, Animals. rabbits, and partridges. In the evening, we amused ourselves in fishing, and caught some red mullets. The harbour appeared as literally swarming with the most beautiful fishes, of all colours. We perceived some that were green, others that were blue, and again others that were striped. Our sailors taught us to use small shell-fish for our baits; and as we lowered these to the bottom, the water being as clear as crystal, the fish, tempted from their haunts among the marine plants that covered the rocks, were seen distinctly whenever they took the snare. The Greeks are very expert fishermen, and our sailors caught many more than we could do; they had also a curious method of luring the fish out of the spiral shells which we found here, by a continued and gentle tapping

printed at Venice, which states that the island is metalliferous. " La quale insula, è montuosa, et ai vene di metalli copiosa." Vid. Turco-Gracia, lib. iv. p. 302. Basil, sine anno.

of the shell with the point of a knife, accompanied by a tremulous whistling. We found several kinds of shell-fish; and could discern some large scollops lying upon the rocks beneath the clear still water, but they were out of our reach. Very fine spunges might also be gathered from the same rocks, all around the bay. It continued calm all the next day. The author went early on shore, to see if any antiquities might be found between the two ports; and was fortunate enough to discover two Greek Marbles; the first of which, a bas-relief with an inscription, he purchased and brought away. It was found by a peasant upon a small rocky isle near to the mouth of the harbour of La Scala. The sculpture had not much merit; but any relic is worthy of notice which exhibits an example of Grecian sculpture at Patmos, where no antiquity of this kind has hitherto been discovered. This marble is a sepulchral tablet, or CIPPUS, as distinguished from the STÉLÉ, and it is now deposited in the Vestibule of the University Library at Cambridge1. The subject represented is the DEATH-BED of "ARISTEAS

(1) See " Greek Marbles," No. XIII. p. 11. Camb. 1809.

CHAP. I. SON OF ZOSIMUS." A dog is introduced into the CHAP. design, apparently watching for the moment of dissolution. This figure, denoting the Anubis of the Egyptians, and Hermes of the Greeks, commonly appears upon sepulchral monuments, as a symbol of Mercury the conductor of the souls of the dead. Beneath the bas-relief is this inscription:

A PICTEAC Z O Z I M O Y

The other marble was also a *cippus*, nearly of the same form, with an inscription almost as brief as the preceding:

ΔΙΟΔΩΡΑ ΧΡΗΣΤΕ ΧΑΙΡΕ

The meaning of the word $\chi \alpha i g \varepsilon$ upon a *cippus* will hardly admit of dispute. The *Greeks* used it when they drank to each other's health. It is the common form of salutation, upon almost every *Grecian* tombstone. But those who are curious to learn its various significations, when used in conversation by the *Greeks*, may consult *Lucian* himself; who, when apprentice to his uncle, had often employed his chisel in carving the letters of a word on stone; which he after-

CHAP. I.

wards used as the subject of one of his critical dissertations ¹.

Departure from Patmos.

This being the evening of the sixth day since our first arrival in Patmos, and perhaps being as well acquainted with it as if we had spent a year in its examination, we became impatient to leave it; and began to fancy, that as our caïque, was hired by the month, its owners would create as much delay as possible, and loiter in port when they might safely venture out. Ac-. cordingly, after midnight, having roused the Captain, we told him that it was a fine night, and that we wished he would put to sea. This man was one of the most experienced pilots of the Archipelago, and as worthy a Greek as ever navigated these seas; but we had not at that time learned to place the confidence in him which he so highly deserved. He was very poor; and having become a widower in an early period of his life, had suffered his beard to grow, according to the manner of mourning in his native Isle of Casos, wearing at the same time a black turban. Without making any answer to our proposal, he continued, for the space of a

(1) Vid. Luciani Opera, tom. 111. p. 186. " Pro lapsu in Salutando." Edit. Reitz. Bipont. 1790.

minute, looking up attentively, with his eyes fixed towards the zenith. Presently he shook Prognostics of Greek his head; and pointing upwards, with his arm extended, asked us, How we liked the sky? mariners. As it seemed to be very clear, and there were many stars visible, we replied that there was every sign of fair weather. " Do you not see," said he. "some small clouds, which now and then make their appearance, and instantly afterwards vanish?" We confessed that we did; but rather hastily insisted, that instead of peering after signs in the sky, he should get the vessel out of harbour as speedily as possible. His only comment upon this order, so inconsiderately given, was a summons to his companions to heave the anchor, and hoist the sails. We had barely light enough to steer through the narrow channel at the entrance, without running against the rocks; and we had no sooner cleared the port, than there fell a dead calm. A prodigious sea, tossing our vessel in all directions, soon convinced us of the nature of the situation for which we had exchanged our snug birth but a few minutes before. Surrounded as we had been by the lofty cliffs of the island, we had not the most distant conception of the turbulent sea we should encounter. Our steady helmsman endeavoured in vain to keep the prow of

79

CHAP. Ι.

DEPARTURE FROM PATMOS.

his vessel to any particular point; and calling CHAP. to our interpreter, bade him notice what he termed, in Greek, "the belching of the deep." This happens during the roll of a calm, when a wave, lifted to a great height, suddenly subsides, with a deep and hollow sound, like air bursting through a narrow channel. Our apprehensions had already got the better of our indifference to. such observations; and in a very different tone of voice from that in which we had ordered him out of port, we asked the Captain, What that noise denoted? He calmly replied, that it was generally considered as a bad omen; but that he more disliked the appearance which he had desired us to notice before we left the harbour. Being by this time heartily sick of our usurped authority, we begged that he would be guided in future by the dictates of his own experience; and, further, requested that he would put back into port. This he affirmed to be impossible; that he would not venture towards a lee-shore during the night for any consideration. We prepared therefore to suffer, as we had deserved, for our extreme folly and rashness, and, strange as it may seem, not without many an anxious thought for the antient Manuscripts we had on board. The crew lighted a wax taper before a small picture of some Saint in the foreship; all

80

the after-part of the hold being occupied by our cots and baggage. Here, when we endeavoured to lie down for rest, we were over-run by swarms of stinking cock-roaches': we remained therefore sitting upon some planks that we had placed to serve as a floor, with our heads touching the roof which the deck afforded, sustaining the violent motion of the vessel, and anxiously expecting the coming of the morning.

For some time after leaving the port, we endeavoured, by hoisting canvas, to avail ourselves of the short gusts of land-wind that came from the east during the calm; a heavy and unsteady sea rolling. Afterwards, a light breeze prevailing from that quarter, we were enabled to stand over to Icaria; where we were entirely becalmed: and the usual alarm taking place, as to pirates upon the coast, we hauled off with our oars. Towards morning, a fresh wind Gale of Wind. sprung from the north-west, accompanied by flashes of lightning; and we directed the prow of our caïque towards Naxos. As the sun rose, the sky bore a very angry aspect; the horizon being of the deepest crimson, interspersed with dark clouds. We soon perceived that the prediction made by the Casiot master of our vessel would be fulfilled, and that we should encounter

CHAP. II.

G 2 -

PATMOS TO PAROS.

CHAP. a storm. The high land of Icaria sheltered us II. until we got farther towards the south-west; when the gale freshened, and came upon us with such violence, that we could not keep our course. All our endeavours to beat to windward, so as to weather the northern point of Naxos, and bear down the strait between that island and Paros, were ineffectual: we fell fast to leeward; and getting among some rocks upon the eastern side of Naxos, the foresail was carried away. The first notice that we received of this accident, came with a wave, which broke over the caïque, and almost filled our birth: it was fortunate that those upon deck were not washed overboard. We made our way up as well as we could, expecting every instant that something more serious would happen. The waves ran mountains high, and the caïque would not answer to her helm. During the delay caused by getting the foresail repaired, we shipped water continually; and being obliged to take the gale in poop, such a sea followed us, that there was reason to fear, if the mainsail gave way, the vessel would founder. When matters were somewhat rectified, we steered for a narrow channel between some high rocks and the eastern side of the island: it seemed rather like flying than sailing: our little caïque ran over the curling tops of the highest

.84

8

ISLAND, OF NAXOS.

waves, without shipping any more water. This was remarked by our undaunted Captain, stationed with his crew at the helm, who exclaimed, "Let us see one of your frigates in such a sea as this: there is not one of them could weather it like my little caïque!" We Vessel passed like lightning within a cable's length of the South some dreadful rocks, over which the sea was dashing as high as our mast head; until getting under the lee, to the south of Naxos, we ran the vessel aground, close to a small creek, upon some white sand.

driven to of Naxos.

Within this creek another small bark had taken shelter; the crew of which, seeing our situation, came to assist our Captain in getting his caïque off the sand, and in hauling her farther up the creek, in which they happily succeeded. We then cast anchor, and began to examine the state of our baggage. Like true shipwrecked mariners, wet to the skin, and without a dry thread on board, we opened all our stores upon the rocks, to expose our clothes in the beams of the sun. Every article of our linen was completely soaked; but, to our great joy, the Patmos Manuscripts had escaped, and were safe. We had put them into a small, but stout wooden box, in the stern of the vessel; and had covered this with

85

CHAP. II.

ISLAND OF NAXOS.

CHAP. every article of canvas, &c. that could be _____ collected.

The gale continuing from the same quarter, and with the force of a hurricane, we were detained here during this and the following day. It is surprising for what a length of time, and how often, the north-west rages in the Archipelago. It prevails, almost unceasingly, through the greater part of the year. After sun-set, there is generally a calm, which is succeeded by light breezes from the land, especially from mountains surrounding gulphs; but at sun-rise the northwest begins again¹. The little creek in which our vessel found shelter is called, by the islanders, the Bay of Panormo; and there are some insignificant ruins upon the rocks above it, which they call Panormo Castle². The only inhabitants we saw were parties of men leading uninterruptedly a pastoral life, without paying any tax, either to

(1) Mr. Spenser Smith, brother of Sir Sidney Smith, informed the author that he was an entire month employed in endeavouring to effect a passage from *Rhodes* to Stanchio: the north-west wind prevailed all the time with such force, that the vessel in which he sailed could not double Cape Croo.

(2) Tournefort mentions this little harbour, under the name of **PANORMO**. (Voy. du Levant, tom. I. p. 248. Lyon, 1717.) None of the ports of Naxos are proper for the reception of large vessels, and therefore it is that Tavernuer says the island has no ports.

Panormo.

Independent Shepherds.

the island or to the Turkish Government: we found them tending their sheep and goats in this wild part of Naxos, like a race of primeval shepherds³. They brought us some sheep soon after our arrival; descending the rocks with their bare feet, and wearing upon their legs the cothurnus, in its most antient form, made of the undressed skins of their goats, with the hair on the outside. Whence they came, or who they were, we could not learn; for they said they had little connection with any of the villages of the island, nor any settled place of residence; that they had neither wives nor houses; sleeping at night behind some bush, in the open air, and labouring merely for subsistence, without a thought of riches. They had all the same kind of clothing: it consisted of a woollen jacket, and short trowsers, of their own manufacture,

(3) According to HERODOTUS, the most antient inhabitants of Naxos were a race of Ionians. ARISTOTLE relates, that the most wealthy of them lived in the town, and that the rest were scattered about, among the villages, in different parts of the island. A very antient Inscription found near the base of Zia (Δ IA), the principal mountain, which is preserved by Spon and by Tournefort, will prove that the pastures of Naxos had invited shepherds in a very early age. It consists only of three words, OFOS Δ IOS MEADSIOT, "Mountain of Jupiter, Guardian of Flocks." The title of Shepherd, as applied to the Deity, is of great antiquity. It is often found in Scripture. "GIVE EAR, O THOU SHEP-HERD OF ISRAEL!" (Psalm lxxx.1.) "THE LORD IS MY SHEPHERD— HE MAKETH ME TO LIE DOWN IN GREEN PASTURES: HE LEADETH ME BESIDE THE SILL WATERS." Psalm xxiii. 1, 2. 87

CHAP, II.

partly concealing the cothurnus of goat's hair CHAP. upon their legs. They cover their head with a red scull-cap, which is manufactured at Venice'. Reckoning their goats and sheep together, these independent shepherds have five or six hundred animals in each flock. They shear their sheep twice a year; putting the rams to the ewes in May, and removing them when the latter begin to lamb. They speak the modern Greek language; and perhaps recruit their numbers from the race of Albanians which is scattered over all Greece. They told us that they made three or four

> (1) This part of the modern Greek and Albanian dress is the most antient: it may be observed upon a bas-relief of the highest autiquity, near to Orchomenos in Baotia: it is still worn throughout Albania, and among all the Grecian Isles, as it was by their ancestors, and by the Byzantine Emperors. It is common also to the Turks, from the Grand Signior to the meanest slave, who wear it beneath the turban : and the portrait of Manuel Palaologus (exhibiting this cap with the addition only of ornamental gems about it) which was engraven as a Vignette to the First Chapter of our Third Volume, 8vo. edition, was placed there expressly to shew, that the Turks, in their domestic habits (when it is sometimes usual for them, as destitute of ceremony, to take off their turban), exhibit a costume precisely corresponding with the appearance presented by that portrait. Persons who have never seen the Turks excepting upon occasions of ceremony, when their heads are covered by high calpacks and by turbans, and who do not therefore remark the antient and common covering for the head which is below these, will not perceive any resemblance between the figure of 'a modern Sultan and the portrait of Manuel Palacologus; although nothing can be more striking; for they have the same characteristic aquiline features, the same length of visage and of beard, and the same covering of the crown on the head.

hundred *piastres* annually, out of a flock of five hundred sheep and goats: and this sum they spend in the few necessaries or indulgences they may require. We killed and dressed one of their sheep: the mutton had a very bad flavour.

The island has no port on its eastern side: it Appearance is there mountainous, but the soil is bleak and of the Island. barren. The rocks in this part of it consist of alternate strata of schistus and limestone. We noticed a stratum of primary limestone, surmounted by schistus; and above that was a layer of a soft kind of Cipolino marble, striped blue and white. The next day, October the sixteenth, we landed to collect plants, and to examine the traces of buildings above this little bay; which may be called Panormo Creek, for it merits no higher consideration. We found the remains of walls, built above precipices, in which cement had been used; and noticed a door, with a small room that had once been stuccoed. In a rude chapel, which the shepherds had constructed of loose stones, we observed a fragment of antique marble; but, upon the whole, these works had much more the appearance of buildings hastily constructed by pirates than by any people acquainted with

CHAP. II.

II.

CHAP. architectural knowledge. We noticed some caves near the shore; and it is probable that this obscure and almost unknown retreat has offered an occasional asylum to some of the numerous corsairs of the Archipelago. After this, our botanical excursions led us a little farther into the interior, over a barren district, " fitter," as Tournefort said of the whole island', " to inspire sadness than joy." We saw neither fixed inhabitants, nor any mark of cultivation². The high rocks above the creek were covered with the blossoms of a species of Cyclamen, probably the autumnale of Ray': we collected a great number of these, and several bulbousrooted plants, particularly one with a small and very elegant white flower, which we thought was new, but the specimens were afterwards injured or lost. We could not find Tournefort's

> (1) " Elle nous parut d'abord plus propre à inspirer de la tristesse que de la joye." Voyage du Levant, tom. I. p. 254. Lyon, 1717.

> (2) Count de Choiseul Gouffier gave a very different description of the north part of the island. "Si l'on avauce dans les terres, on trouve des vallées délicieuses, arrosées de mille ruisseaux, et des forêts d'orangers, de figuiers, et de grenadiers. La terre par sa sécondité semble prévenir tous les besoins de ses habitans; elle nourrit un grande quantité de bestiaux, de gibier. Le blé, l'huile, les figues, et le vin, y sont toujours abondans. On y recueille aussi de la soie." Voyage Pittoresque de la Grèce, p. 41. Paris, 1782.

Heliotropium humifusum⁴: we had seen it often in the Holy Land, and wished to observe the change that might be effected by such a difference of situation. The mineralogy of this island Minerals. promises to be highly interesting, when an opportunity is offered to any naturalist for its investigation; but where there are no mines, the mere traveller, examining only those excavations which Nature carries on, has little chance of adding greatly to his stock of knowledge. The Geologist, attending only to aggregation, may fare better in the midst of the compound masses which are everywhere presented to his view. A species of breccia was found here, called Ophites by the Antient Greeks, which may have been the Verde antico; it is described as of a green colour, spotted with white. From the position of the strata, as before noticed, this compound may frequently occur, where the layers of schistus and marble meet, and where the schistus is either of a green colour itself, or contains green serpentine. It has been also pretended that gold ores exist in the island, but that the inhabitants carefully conceal the secret of their locality, through fear of being compelled by the Turks to work those ores. The famous emery of

(4) Tournef. ibid. p. 265.

CHAP. II.

11.

CHAP. Naxos is situate in an opposite part of the island, towards the north-west: the author has ever since regretted that his rough treatment at sea entirely banished from his recollection all thought of this important part of the natural history of Naxos; and he has the more regretted his inattention to it, as we are entirely ignorant of the geological position, association, and matrix of emery. Since the celebrated Tennant has discovered its relationship to corundum¹, independently of its importance in a commercial view, and of its connection with antient history, it is peculiarly entitled to notice. The matrix of the corundum of the Carnatic is a stone of a peculiar nature, resembling the Naxian marble². The crystals of corundum are dispersed in it in the same manner as those of feldspar are disposed in porphyry³. The author has succeeded in obtaining, by the accidental fracture of the compact emery of Naxos, as regular an hexagonal form as that which may be noticed in the 1 25.1

> (1) See the Communication read to the Royal Society, July 1, 1802, on the Composition of Emery, by Smithson Tennant, F.R.S.

> (2) " It is similar," says the Count de Bournon, " to the kind of marble known by the name of Coarse-grained Saline Marble." (See Bournon on the Corundum Stone, p. 50. Lond. 1802.) This description answers to the marble of Naxos.

(3) See Bournon, &c. as above.

Ete and the set of the set

corundum of the Mysore: nor is it unreasonable to infer, as a probability, that Telesia, or perfect corundum, under the forms exhibited by the Oriental sapphire and Oriental ruby, may be found by future travellers in the mines of emery at NAXOS. Tournefort relates, that, in his time, those mines were situate at the bottom of a valley, beyond a place called Perato, in the territory of the French Consul; but that the inhabitants find emery as they plough the earth, and carry it down to the sea coast, where the English often ballast their ships with it; and it was so cheap, that twenty-eight hundred weight of it might be purchased for a crown⁴. Dapper says, that a cape on the north-west side of the island takes its name from this stone⁵. Almost all the emery of commerce comes from Naxos. The island has been celebrated for ages, in being the peculiar deposit of this remarkable mineral." Pliny, in the description he has given of a green stone which the Antients called topaz, says it was the only gem that admitted the impression of a file; that all other gems were polished by means of

(4) Tournef. Voy. du Levant, tom. I. p. 263. Lyon, 1717.

CHAP. II.

CHAP. II. the grinding-stones of Naxos': and, in a preceding part of his work, he speaks of Naxium as used in polishing marble and gems². The shepherds told us that wild honey is found in great abundance in this island: the children set out in parties to collect it, as in the other islands of the Archipelago. From the rocks above Panormo Creek, we had a fine view of the great cluster of islands lying towards the south-east.

Naxian Boccaze. On Saturday, October the seventeenth, at sun-rise, we got under weigh, with a light breeze from the north-west, and steered for the south of the boccaze, or strait, between this island and Paros. In passing up the channel, we were obliged to use our oars; but by ten o'clock A. M. we came to anchor in the port, close to the town of Naxos, having nearly completed the tour of the whole island. We found only a few boats in the harbour. The Greek sailors still preserve the custom, mentioned by Homer, of hauling their vessels on the shore,

^{(1) &}quot;Eadem sola nobilium limam sentit: cæteræ Nazüs cotibus poliuntur." Plin. Hist. Nat. lib. xxxvii. c. 8. tom. III. p. 542. L. Bat. 1653.

^{(2) &}quot;Signis è marmore poliendis, gemmisque etiam scalpendis atque limandis Nazium diu placuit ante alia." *Ibid. lib.* xxxvi. c. 7. tom. III. p. 478.

with the prows resting on the beach: having CHAP. done this, they place the mast lengthwise across the prow and the poop, and spread the sail over it, so as to form a tent; then beneath these tents they sing their songs, drinking wine freely, and accompanying their voices with the lyre or three-stringed viol: Such a concert greeted our arrival. Being told that a Latin archbishop resided in the place, we paid him a visit. The town makes a neat appearance from the harbour, Town of but has altogether the character of an antient Greek city when it is entered; the streets being irregular, deep, narrow, and dirty. We found upon the mart, near the shore, large heaps of the most enormous green citrons we had ever seen, ready to be removed on board some boats waiting to convey this kind of freightage to Con-They are valued principally for stantinople. their very thick rind, of which a green sweetmeat is prepared: but we could hardly have credited an account of the size to which this fruit here attains. Some of these citrons were as large as a man's head, and of the most singular forms; consisting almost wholly of the rind, with very little juice in any of them. The archbishop received us very politely, and prepared a dinner for us; but we begged to make the best use of our time, and therefore declined

95

Manuscripts.

his invitation. By his kindness we were admit-CHAP. ted to the churches, which have the privilege of being furnished with bells, as at Patmos. A Greek priest, in answer to our inquiry for Manuscripts, produced from beneath an altar, lying upon the damp pavement of one of the sanctuaries, a quarto Codex of selections from the Gospels, written upon vellum for the use of the Greek Church: this, as usual, had been condemned as soon as a printed copy had supplied its place. We easily contrived to purchase it; and afterwards obtained, for a small sum, by means of the same priest, a similar Manuscript, apparently of the same age, from one of the Greek families in the place 1. In this manner, antient copies of the Gospels may be procured in the Archipelago, by persons who will be at the pains to seek for them; as, in our own country, the rarest English editions of the Scriptures may be found in counties at a distance from the metropolis; where they have either been banished from the churches to make way for more modern Bibles, or laid up in the vestry; or in store-rooms, as waste paper, in private families, being too antiquated and

> (1) These are the same Manuscripts mentioned by Professor Guisford, Nos. 47. 43. p. 100. of his Catalogue. Oxon. 1812.

inelegant in their appearance for the taste of CHAP. II. the owners².

The want of a proper port for large shipping has saved Naxos from many a visit on the part of the Turks. We were told that not a single Moslem could be found in the whole island, and that many of the inhabitants of the interior had Inhabinever seen a Turk: but they sometimes 'experience the honour of a call from their masters, en passant; and then, "upon the arrival of the meanest commander of a galliot," says Tournefort^s, "neither Latins nor Greeks ever dare appear but in red caps, like the common galleyslaves, humbling themselves before the pettiest officer." As soon as the Turks have left them, nothing is to be heard but tables of their genealogy; some deducing their origin from the Paleologi, or from the Comnenii; others from the noblest Venetian families4. The island was for three hundred years the residence of princes appointed by the Venetians as Dukes of the

VOL VI.

tants.

⁽²⁾ The author has seen discarded old black-letter Bibles in the chests of country churches; and once found a copy of Miles Coverdale's revised translation of the Scriptures in the hands of a Welch housekeeper, who was preparing to use it in covering preserves.

⁽³⁾ Tournef. Voy. du Levant, Lett. V. tom. I. p. 257. Lyon, 1717. (4) Ibid.

CHAP. Archipelago; from the beginning of the thirteenth century, when the Emperor Henry gave this title to Marco Sanudo, until the expulsion by the Turks, under Selim the Second, of Giacomo Crispo, the twenty-first and last duke. It is owing to this circumstance that the Venetian costume still exists among the Latin ladies. That of the *Greek* women is very remarkable; but it has been already described and accurately represented in Tournefort's Travels'. We were unable to resist the hospitable importunity with which some of the inhabitants invited us into their dwellings; and might have sacrificed the whole of our time in going from house to house, to be regaled with lemonade and sweetmeats. Some of the ladies were very anxious to be informed how the women of our island passed their time; and whether the rich dresses of the Naxian women accorded with the habits of English females of distinction. We told them that English ladies of elevated rank aimed only at simplicity in their dress; that, in our commercial country, wealth was very often on the side of low birth; and, consequently, that expensive dresses and costly ornaments, so far from being the distinguishing characteristics of

(1) Tournef. Voy. du Levant, Lett. V. tom. I. p. 228.

high breeding, were generally considered as CHAP. marks of vulgarity; that the wives and daughters of our nobility wore the plainest, and generally the cheapest, apparel. Still, their curiosity was not satisfied; they wished we would tell them of what materials the dresses consisted; and whether any thing of the kind could be had at Malta, or Constantinople; and in the evident desire which they betrayed of imitating the London mode, we were amused in thinking what sort of a metamorphosis would be effected by the arrival of an English woman of rank at Naxos: what discarding of brocade, and coloured velvet, and embroidered vests, for British muslin and stuffs: what scrambling for a few pieces of crape and cambric, if such merchandize should arrive in the midst of the revolution: how all the old family wardrobes, which had been handed down in form and substance from the Justinianis, the Grimaldis, and the Summaripas^e, would give place to the simplest English costume. As we had a variety of other business to claim our attention, during the short stay we intended to make, we put an end to a chain of inquiries that redoubled after every answer, by promising to send all the latest

. 99

CHAP. modes, by the earliest opportunity, either from II. Paris or London.

The population has not been altered since Population. Naxos was visited by Tournefort : that of the whole island, including the women, may be estimated at eighteen thousand persons : about three thousand of this number are Latins, and the rest are Greeks. During war, they pay forty purses as a tax to the Turkish Government, each purse being equivalent to five hundred piastres. In time of peace, very little impost is levied. Their wine maintains its pristine celebrity, and we thought it excellent. The Latin families live together in the castle, or fortress, separated from the Greeks, not only by situation, but by numberless petty feuds and jealousies. We found fragments of a red porphyry here, much resembling lava. In the evening, it rained, which was quite a novel. spectacle to us at that time. The archbishop had again prepared his table for us; and, as we had refused his dinner, we went to sup with him. He had also provided beds, and every other necessary convenience for our accommodation; but as the impossibility of making any adequate return for such civilities is often a painful reflection upon these occasions, we

determined to rough it out, as usual, in our CHAP. caïque. The Greek houses of every description, it is true, swarm with vermin; but we could not pique ourselves upon the superiority of our accommodation on board, even in this respect, from the swarms of cock-roaches by which we were infested: and some rats, the athleta of their kind, during the last night that we remained in Panormo Bay, actually carried off, not only the author's books of plants, filled with specimens, but also a weighty Turkish poignard, tied up within it, used for the double purpose of digging roots, and as a weapon of defence.

Early the next day we landed, to seek for Antiquisome remains of the antient city, which was nearly in the situation of the modern town. The antiquities of Naxos relate almost exclusively to the worship of BACCHUS. The inhabitants are still much addicted to drinking, and every medal and gem of the island prove how prevalent the rites of Bacchus once were. This god is represented bearded upon all the Naxian coins and signets. We obtained several, which we shall presently describe. Below the window of a house belonging to the Chancellor of Naxos, we found an Inscription, upon the capital of a Inscripcolumn, of an order in architecture unknown to us. It was discovered by a monk, who was

CHAP. II. digging for building materials among the remains of the antient city: he found the shaft of the column near to it, and a small antique lamp of *terra cotta*. The pillar itself was, in all probability, a sepulchral *stélé*. The inscription is hardly worth preserving, as it contains only a few names; but one is unwilling to neglect the preservation of any *Grecian* relic, and especially where few are found.

> ΧΑΙΗΤΟΣΚΑΙ ΗΡΟΔΟΥΚΑΙΣΕ ΛΕΥΚΟΥΚΠΟΛΧΡ ΟΥ

ΔΙΟΓΕΝΟΥ ΚΑΙ ΑΜΜΩΝΙΟΥ

ΠΡΟΚΛΟΣΠΡΟ ΚΛΟΥΚΑΙΑΛΕ ΞΑΝΔΡΟΥΚΑΙ ΣΩΣΙΜΟΥ ΣΥ

We were afterwards shewn, upon the top of a house below the walls of the fortress, a small slab, rather of *Parian* than of *Naxian* marble (the grain being finer than in the latter), containing an inscription of great antiquity: the letters were small; and they were exceedingly

well cut, like some of the inscriptions which have c been found in *Troas*, of the age of the *Seleucidæ*. — The names of *Aristotle*, *Socrates*, *Theocritus*, and *Alexander*, inscribed upon the same marble, somewhat excited our curiosity; but, after all, we did not find a single fact stated in this inscription: it consists only of a list of names; and many of these are lost, owing to the injury the stone has sustained.

CHAP.

CHAP. We copied this inscription with difficulty, being continually interrupted by the exorbitant demands of the woman to whom the house belonged. She positively refused to sell the marble, having a superstitious notion that it prevented evil spirits from coming to her dwelling: after insisting upon a payment of thirty piastres for a sight of it, she allowed us to copy it for a hundred paras, but not without continual interruption, and the most clamorous entreaty for more money.

We had sufficient employment afterwards, Sculpture. among many valuable antiquities. Every fragment of the antient sculpture of Naxos denoted the most splendid æra of the art; but Bacchus was all in all. The fragment of a marble bust of the God, crowned with vine leaves, was shewn to us, of the most perfect sculpture; but the price set upon every thing proved our approximation to western countries, and that the intercourse between this island and Italy had taught them how to appretiate the works An antient weight had of Grecian artists. been dug up, of an oblong square form, with its handle, neatly cut in marble : this we brought away: it weighs exactly four pounds, seven ounces and a half. A Greek had recently discovered a vessel of terra cotta, containing some

small bronze coins of Naxos, of the finest die, CHAP. II. exhibiting the head of the bearded Bacchus in, front, and a diota on the reverse, with the Medals. legend NAEI Ω N: we bought ten of these. The author had also the good fortune to procure a silver medal of the island, of such uncommon rarity, that it is believed there is not a duplicate of it in any collection in Europe. It has on the front a bearded head of Bacchus; and for reverse, the diota, with the letters NA. It is wonderful, considering the wealth and population which the testimony of Herodotus proves the Island of Naxos to have possessed, that its coins should be so scarce, and generally so paltry; while those of its Sicilian colony, so much less noticed in history, are by no means uncommon; and for size and workmanship, the latter are among the finest examples of art extant.

Visiting, as usual, the working silversmiths, we found among them several gems. The first was a carnelian with the figure of a goat, a symbol of Bacchus: the second, which we could not obtain, represented a whole-length figure of the God, reeling, decorated with vine-leaves and grapes, and followed by a dog; he held a thyrsus in one hand, and a diota in the other

Gems.

CHAP. II.

turned bottom upwards, as a proof that he had emptied the contents of the vase. Upon another gem, which we were also unable to purchase, we observed an altar, supporting a bust of Bacchus crowned with vine-leaves, in a very singular attitude, with its mouth open, as if making a libation of the effects of intoxication : around it appeared the letters of his name, YODYNOIA, written, in very antient characters, from right to left. At the house of the Chancellor, from whom we experienced the most hospitable attention, we saw the hand of an antient statue, executed in the best style of Grecian sculpture, and certainly not inferior to any thing yet discovered. Also, near to his house, the torso and bust of a military figure, with a robe over the shoulder, of the most exquisite workmanship. The sculpture of the island appeared to be generally of the sort of marble called Parian, whether found in Paros or in Naxos; and the remains of works in architecture to have been executed in the splendid, broader-grained, and sparry marble, which is more peculiar to the Naxian quarries : but neither the one nor the other exhibited the smallest appearance of that false lustre and glittering surface which has sometimes, and very improperly, been supposed to characterize

works of art executed in the marble of these CHAP. islands'. Age had given to all a warm and beautiful tint of a yellow colour: and, to the eye, every fragment seemed to possess the softness and consistency of wax or of alabaster. The Chancellor told us, that in the interior of Colossal Statue. the island, at the distance of three hours from the town, near to some antient marble quarries, there yet remains an unfinished colossal statue, as he said, of Apollo, but evidently of Bacchus, with a *bearded* countenance, sixteen feet in length². A public fountain near to the town is still considered by the inhabitants as THE FOUNTAIN OF ARIADNE, and it is called by that name. Some traces of antient works which may yet be discerned near to this fountain shew that it has long been held in more than usual consideration.

Being unable to undertake a journey into the Temple of interior, we next visited the ruins of a TEMPLE

Bacchus.

(1) " Le marbre Grec est à gros grains crystallins, qui font de faux jours, et qui sautent par petit éclats, si on ne le menage avec soin." Tournef. Voy. du Lev. Lett. V. tom. I. p. 241. Lyon, 1717.

(2) Mr. Humilton, author of Ægyptiaca, with his companions, afterwards visited Naxos, and saw this statue of Bacchus. It is of such enormous size, that Mr. Hamilton's party spread a cloth upon the beard, and made it serve as their table for breakfast.

CHAP. 11. OF BACCHUS, upon an insular rock on the north side of the port. The portal of this temple has been long famous, and an account of it is given in every book of travels where Naxos is mentioned. It is asserted, that the isle was once connected with Naxos by means of a bridge and an aqueduct : the author of the "Voyage Pittoresque de la Grèce" says that its vestiges are yet visible': we did not observe them, when we were upon the spot. It is an error to suppose, as many have affirmed, that nothing remains of the temple but this portal, although it be true that little else can be seen. Considering the pains that have been lately bestowed by many of our English travellers in making excavations in different parts of Greece, it is rather extraordinary that no person has been induced to lay open the site of this remarkable building, where there are no Turks to interfere with the workmen, and where there is almost a certainty of reward for their trouble. For our part, we had not the means of carrying on such works; but we uncovered a part of the soil, and discovered a beautiful capital of a Doric pillar, thereby ascertaining the order of

(1) Voy. Pittor. tom. I. p. 43. Paris, 1782.

architecture observed in the building. We CHAP. were struck with admiration at the massive structure and the simple grandeur of that part of the temple which still remains standing: it consists of three pieces only of the Naxian marble, two being placed upright, and one laid across. Below these are large square masses, which belonged to the threshold; and this consisted of three pieces only². The view through this portal, of the town of Naxos with its port, and part of the island, is very fine. We endeavoured, by a sketch made upon the spot, to preserve a memorial of the scene; and it has been since rendered more perfect, without interfering with the fidelity of the representation³. The mountain seen to the left is probably ΔIA , now called Zia, whence the island was formerly named. We brought away some large specimens of the marble, which lies in

(2) Tournefort ascertained the dimensions of the portal: according to him, (see tom. I. Lett.V. à Lyon, 1717.) it is eighteen feet high, and eleven feet three inches broad ; the lintel is four feet thick ; the two uprights are four feet thick, and three feet and a half broad. All the parts, he says, were cramped with copper; for he found small pieces of that metal among the ruins.

(3) See the Plate in the Third Quarto Volume of these Travels, p.398; from a Drawing by Mr. H. Wright, of Magdalen College, Cambridge.

109

fragments near the portal: it is so much softer CHAP. and more laminary than the Parian, that the difference between the two kinds is easily to be recognised by fracture. It is singular that no account of a building of such magnificence should be preserved in any author. Ptolemy, as it is observed by Tournefort, seems to mention an antient city upon which it is probable that the modern town of Naxos is built': but no allusion to this small isle and its temple occurs in any antient description of Greece, notwithstanding all that has been said of Naxos, by Herodotus, by Appian, and by other writers. From this isle we returned to conclude our researches in Naxos.

Other Rains.

The citadel was constructed under Marco Sanudo, the first duke of the Archipelago; and the antient palace of his successors was the large square tower which is now remaining within this circular fortress^{*}. Near to a small chapel beneath its walls, we found a cippus, representing two female figures, in bas-relief. There is not a house in the town that has not

- (1) Nákou Nhrou n rolis. Ptol. Geog. lib. iii. cap. 15.
- (2) Tournef. Voy. du Lev. tom. I. Lett.V. Lyon, 1717.

some relic of this kind near to it; and similar CHAP. remains in the interior are very common. The inhabitants told us, that there are two places where ruins and inscriptions are found; the one called Apollonon, and the other a village which bears the name of Philotes. They spoke of ruins at two hours distance from Naxos, towards the east, and offered to conduct us thither: but the journey would have detained us another day; and we were afraid of loitering, at this season of the year, with such a vessel as ours, upon a doubtful speculation; and therefore refused to go. Nothing happened to us more extraordinary than our almost unaccountable neglect in not visiting the emery mines : this arose partly, as has been stated, from the alarm into which we had been thrown upon our first coming to the island, which made us forget to inquire after them; and also, in some degree, from not rightly comprehending the meaning of the term smeriglio, when the exports were stated to smeriglio. us: we would willingly have bartered the time which we spent in copying, and in procuring permission to copy, an imperfect and unintelligible inscription, for the opportunity of making a few observations upon the Naxian corundum, of which they have two varieties,

111

very different in their qualities'. They find, also, CHAP. abundance of marcasite, or sulphuret of iron: this

> (1) The loss has been more than supplied, by a valuable communication from Mr. HAWKINS upon the Geology of Naxos, in the following Extract from his Manuscript Journal.

" NAXIA,

" The largest of the Cyclades, and the most circular.

" Frequent but not deep indentations of the coast, and therefore no harbours.

"The longest diameter of the island, according to the Russian Chart, is about eighteen miles, its breadth about twelve, and its two farthest extremities point N. N. E. and S. S. W.

"This, too, is the direction of a mountainous ridge extending from coast to coast, and running through the centre of the island.

" The whole district eastward of this ridge is mountainous, sloping towards the shore, and furrowed with deep narrow vales.

"Mountains and wide intervening vales or plains compose the district which lies westward.

"These mountains dip gradually towards the southern shore, but terminate abruptly on the north and the north-east.

" On the western extremity of this bold line of coast is seated the town of Naxia, which overlooks a plain of considerable extent, that appears . to have been gained from the sea by the alluvial depositions of the largest river in the island.

" In the centre of the island lies the broad fertile vale of Trimalia (Agualia); the boundary of which, on the east, is the main ridge of mountains already described, and of which the highest eminence is denominated Giá, or Jiá. Koronos is the name of another peak, nearly as high, lying at the distance of five miles to the north.

"The high graggy hills which form the eastern boundary of the plain of Nuxia are composed of a species of gneiss, resembling that of Miconi and Delos; the foliaceous texture which usually distinguishes this genus of primitive rock being here scarcely perceptible.

" The mountains which border the plain of Naxia, on the south-east, are composed of another kind of primitive rock, which extends as far

as

112

was mentioned to us by the Chancellor, but CHAP.

as the eastern shore of the island, and forms its central ridge, as well as the whole of its interior.

"This rock is a compound mass of *mica* and *feldspar*, of a fine foliaceous grain, corresponding with that which I found near *Marathon*. It divides into large slabs: small veins of *feldspar* frequently occurred in the transverse fissures of the rock; and the *feldspar* sometimes contained the *Amphibole Actinote aciculaire* of *Haüy* and *Brogniart*.

"I observed that the strata on the west of the Vale of Trimalia dipped regularly in an angle of 40° to the w. and by N. and N. w. by the compass; and that, near the village of *Potamia*, they alternated with beds of the large-grained white primary marble, which varied in thickness, from six to ten feet. Advancing eastward, the mountain which divides *Potamia* from the Vale of *Trimalia* presents the same rock entire; but here the laminæ were of a waving form, and the rock was not intersected by fissures. On the eastern side, however, of the same mountain, as I descended into the Vale of *Trimalia*, I observed that the strata re-assumed their straight slaty texture; but here they dipped in a contrary direction, i.e. to the east, under the same angle.

"Soon after this, recommenced alternate beds of the same primitive marble as I observed before, which now became more frequent, and continued through the whole tract over which I passed, as far as the eastern coast of the island; presenting, eastward of the mountain of Jia, and the village of Aperathi, a greater breadth even than the beds of the micaceous rock; the average thickness of these beds amounting to 40 or 50 feet, and occurring sometimes of 100. The grain of the marble was here finer; and although the strata preserved the same degree of inclination to the horizon, yet their line of bearing was somewhat different, their dip being here E. and by N.

"Fragments of emery occurred plentifully in the Vale of Trimalia; and I observed black horn-slate, in thin beds, in the micaceous strata west of Aperathi. Near Xaezi, in the Vale of Trimalia, I found rosecoloured quartz.

"The best *emery* is found at *Triangatho*, a deep narrow vale, one hour and a half distant, east, from *Aperathi*; and one hour from the sea-shore.

"To

CHAP. Formerly it was employed in the manufacture of ear-rings and bracelets in *England*; and buttons are yet made of it in *Birmingham*, which have, for a short time, almost the lustre of real brilliants.

Arrival at PAROS.

At eight o'clock A. M. October the nineteenth, we found our vessel entering the harbour of $NAUSSA^{1}$, at the northern extremity of the Isle

"To ascertain all the circumstances under which it occurs, was the principal object of my excursion hither; and the following is the result of my observations :--

"The emery occurs, in scattered fragments, over the whole surface of this district, but more abundantly in the bed of the winter torrent which runs through the Vale of *Triangatho*. I remarked, that the fragments were largest, where they were fewest, on the upper slopes of the hills; and that they diminished in size, but augmented in number, as they occurred lower down.

"The proximity of these fragments to the micaceous strata, their lamellous form and granular mass, together with the frequent admixture of mica, indicated their native bed to have been originally in that rock. No search, however, had been made by digging; a sufficient quantity for the annual consumption of *Europe* being collected, without difficulty, on the surface. The sole expense, therefore, is that which is occasioned by the transport of the *emery* to the water-side.

"Three caïques, or Greek barks, load here annually for Smyrna; from whence, in the year 1787, 107 tons of emery-stones were exported to England.

"The best sort of emery, as I have already observed, is found at Triangatho: a sort less esteemed, at Agaso, three hours and a half, south, from the town of Naxiu; and at Leona, on the north coast."

Hawkins' MS. Journal.

(1) See the Vignette to this Chapter. This must be the Porto Ausu of Dapper. (Déscript. des Isles de l'Archipel, p. 261. Amst. 1703.) Tournefort

of Paros; having availed ourselves of the land breeze, in the night, to leave Naxos. This is the principal port for large vessels; but as our object was to get to Parechia, the chief town, Parechia, we ordered our men to bear down the western side of the island. This island is surrounded by harbours; and that of Naussa alone is said to be capable of containing a hundred vessels.

II.

CHAP.

Tournefort mentions Nausa, or Agousa (tom. I. Lett. V. p. 241. Lyon, 1717): and an author who accompanied Mons. de Nointel, during his Voyage in the Archipelago in 1673, writes it Agosa (L'Etat present de l'Archipel de Monsieur M. D. L. Cologne, 1678. p. 57.) " Il deos iz) κάστεα δύο, καὶ χώρα μία. Ι. Παρήκια, ἐπισκοπάτο. 2. Κέφαλος, κάστρο. 3. 'Ayósra. Ins. Paros habet castra duo, et unam civitatem. 1. Parikiam, episcopatum. 2. Kephalon, 'castrum. 3. Augustam." (Vid. Martini Crusii Annotationes in Epistolas Doctorum, p. 207. Turcogræciæ. Basil. sine anno.) Sonnini calls it Naussa. (Trav. in Greece, p. 454. Lond. 1801.) These particulars are noted, because Paros may hereafter excite the notice of our Government. It was in this port that the Russians established the depot of their forces, when they promised to restore liberty to Greece, and became the scourge of the inhabitants; desolating the finest works of antiquity, wherever they went. There is no harbour in Greece better calculated for a national establishment. Fleets may lie there in perfect safety, and in the very centre of the Archipelago. The Turks make no use of Paros themselves : and, viewed only with regard to the abundance of its valuable marble, it ought to be considered as an island of importance to a nation vain of its distinction in the Fine Arts. A very fine Chart of this harbour has been engraved in the Voyage Pittoresque de la Grèce, with all the soundings, &c. as it was surveyed by Kauffer in 1776; shewing the situation of the Russian magazines and fortifications. See Pl. xxxi. p. 70. tom. I. Paris, 1782.

A contrary wind soon after met us; in CHAP. consequence of which we landed, and walked about three miles; meeting, in the first Greek we saw, a proof of that hospitality which is so common in the Archipelago. He was the owner of a house in Paros to which he invited us; saying that his son should be our guide to the marble quarries, and that he would shew us all the antiquities in the neighbourhood. We accompanied him; and made a hearty meal upon salted olives, grapes, boiled pumpkins, and Parian wine. Our boat did not arrive until ten at night. Parechia is a wretched relic of the antient and famous PAROS. Every building in the place, but particularly the Castle, bears some evidence of its pristine splendor, and of

the havoc that has ensued.

October the twentieth, the Waiwode of Paros, who is a native of Tenos sent as Governor to collect the taxes, but not constantly resident, came to visit us, and offered to shew to us the Castle. In the walls of this building we saw some columns which had been placed horizontally among the materials used in building it; and their butt-ends, sticking out, were singularly inscribed with the letter A, placed close to

Castle.

the cavity intended for the reception of the iron instrument called by modern architects the -Louis'; either as a mark by which to adjust the several parts of the shaft, or as a curious method of preserving the initial of the architect's name; so that it could not be seen until the building became a ruin. An instance of a similar nature occurred at Telmessus, where the name of Hermolycus had been carefully inscribed, but in such a manner as to be concealed from observation when the building was entire: this letter may therefore possibly relate to Amphilochus, "the glory of whose art," in an inscription found at Rhodes², was said "to reach to the mouths of the Nile, and to the utmost Indus." The entrance to the interior is of very singular form, being as wide as one entire side of the Castle. It is truly lamentable to view the wreck of beautiful sculpture, visible not only in the construction of this fortress, but all over the town of Parechia, the wretched remnant of a city famous for the birth of Phidias and of

117

CHAP. II.

⁽¹⁾ The name of this dove-tailed instrument is in general use among architects; but it is not found in any English Dictionary. Its origin is very uncertain: the French call the same instrument Louve. Piranesi, in his third volume of the "Magnificenza di Komà," mentions having found stones in antient buildings in which there were cavities for an instrument of this dove-tailed shape.

⁽²⁾ See Vol. III. of these Travels, Chap. VIII. p. 284. Octavo edition,

ΛΗΡΩΣΑΣΑΝΕΘΗΚΕΝ ΑΡΧΩΝΤΟΕΜΕΝ

Also, near a windmill, we found inscribed; "NICIRATUS SON OF ALCÆUS:"

ΝΙΚΗΡΑΤΟΣ ΑΛΚΑΙΟΥ

It may be said, perhaps, that these inscriptions are hardly worth preserving; but instances have occurred in which even such scraps have not been without utility, in adding to the general stock of literature. We afterwards found an *Inscription* of greater length: it was in the left-hand door-way of the Chapel of *St. Nicholas*, in the Church of *St. Helen*, the stone being placed in an inverted position. It states that "THE SON OF THEOCLES, WHO HAD CONDUCTED HIM-SELF WELL IN THE OFFICE OF AGORANOMOS, TWICE, IS CROWNED WITH A GOLDEN CROWN." The legend requires a little restoration, which is here marked by dotted letters.

ΗΒΟΥΛΗ ΚΑΙΟΔΗΜΟΣΕΤΙΜΗΣΕΝ ΚΑΙΕΣΤΕΦΑΝΩΣΕΝΧΡΥΣΩΣΤΕΦΑΝΩ ΝΩΝΓΩΡΥΤΟΝΘΕΟΚΛΕΟΥΣΑΤΟ ΡΑΝΟΜΗΣΑΝΤΑΔΙΣΚΑΛΩΣΚΑΙ ΔΙΚΑΙΩΣΚΑΤΑΤΟΥΣΝΟΜΟΥΣΚΑΙ ΚΑΤΑΤΟΚΟΙΝΟΝΠΑΣΙΣΥΜΦΕΡΟΝ

In a wall of the court we observed a Lecti-CHAP. sternium, in bas-relief; but it had been whitewashed, and this made it difficult to copy an inscription upon the marble. In one part of the stone there appeared, in small characters:

> ---- TOE TOEALESANAPOT --- IPO MOIPO DE SIONAN

Below this were some figures in a reclining posture; and then followed, in larger letters:

ΣΩΧΑΡΜΟΥΠΑΡΑΙ ΕΠΙΚΑΙΕΣΦΟΙΜΕΝΟ ειγαρκαιπαγράσεπ A EIO YAINEI YOAI **OP ANAMENMOPAIT ΚΕΙΣΘΩΠΑΙΣΙΧΡΟΝ**

The four last lines in this inscription were evidently in metre, as we may judge from the beginning of each:

> Εί γὰς και παυξᾶς "Αξιος αίνεισθαι Oepavà uèv ----Κείσθω παισί χρον - -

Similar imperfect remains may be observed in all parts of the town, which have been used for building materials, and generally whitewashed. Near the house of the Imperial Consul, facing the street, we saw this inscription in IL.

CHAP. II. the wall: "DIONYSIUS, SON OF EUSCHEMON, FAREWELL:"

AIONYCIOE EYEXHMONOE XPHETEXAIPE

Two forms of the Sigma are observable in this inscription. That the C and Σ were used promiscuously in very antient times, has been frequently shewn. The C was of the highest antiquity, and certainly in use prior to the æra of the first *Punic* War¹. The C appears on coins and marbles of very antient date². Somewhat farther on, in another street, we found an *inscription* relating to "A DAUGHTER OF AGATHEMERIS:"

Ζω CA PIN..ΟΠΑ---Α--Ογγατηράς Αγαθημερίδος

It is impossible to assign any date to these *inscriptions*; in which not less than three different forms of a single letter may be observed: but this want of uniformity is no proof of the age of the writing.

(2) See Paciandi's Observations on Medals, bearing the legend $LAEI\OmegaN$ and $OPO\Omega CIE\OmegaN$. Mon. Pell. 34.

This day, as the Governor offered to accompany us to see the famous Grotto of Antiparos, and as our host had prepared mules and guides for the expedition, we set off at cight A.M. and rode by the side of a mountain, through cornfields, until we came to the narrowest part of the channel, between Paros and ANTIPAROS. Paros seemed to be in a higher state of cultivation than Naxos. The island produces excellent oil, and abundance of wine. Its ripe olives are highly esteemed by the natives as an article of food, after being salted for one day: this sort of diet has been often deemed, by inconsiderate English travellers in Italy and Greece, very hard fare for the poor inhabitants: but it is one of their greatest luxuries; and we became as fond of it as the people everywhere seem to be from one extremity of the Mediterranean to the other. As soon as we reached the shore from which Ship we were to pass over to Antiparos, we observed a large Turkish merchant ship, laden with soap, and bound from Crete to Constantinople, stranded in the middle of the strait. The master of the vessel, without any compass, and with the usual fatality attending his countrymen in their sea voyages, had relied upon an ignorant pilot, who had persuaded him that this was the greater boccaze between Naxos and Paros, and the ship

3

121

CHAP. II.

stranded.

ISLAND OF ANTIPAROS.

in consequence was driven upon the shallows. CHAP. We went on board; and found the master squatted within his cabin, smoking, and listening to a duet performed by two of his crew upon a drum and a lyre, while the rest were gone in search of people to assist in hauling the vessel off the rocks. Nothing could exceed his perfect Moslem indifference; for although it seemed to be doubtful whether his vessel would ever move again, or, if she did, whether she would not go to the bottom in consequence of the damage she had sustained, he would not stir from the seat where he had remained from the moment the accident happened.

ANTIPAROS.

We landed upon the barren island of Antiparos, and were conducted by the Governor to a small village : here we found a few inhabitants, who were described to us as the casual legacies of different vessels, and principally Maltese, taken by corsairs, and left on shore to shift for themselves. Some of them provided us with mules, ropes, and candles for the grotto, which is situate near the summit of the highest mountain of Antiparos, in the south part of the island. As we rode along, our beasts were terrified by the attacks of the gad-fly, an insect which infests every one of the Cyclades. Having

reached the top of the mountain before mentioned, we came to the mouth of this most prodigious cavern, which may be described as the greatest natural curiosity of its kind in the known world. The entrance to it exhibits nothing very remarkable : it is beautifully represented in the Voyage Pittoresque of De Choiseul Gouffier'; but no book of travels ever did or ever can pourtray the beauties of the interior. As to its origin, it may possibly have resulted Its possible from the dislocation of an entire stratum; and origin, this is rendered probable by the oblique direction of the cavity, and the parallel inclination of its sides. The rock immediately above it consists of the following substances. The upper surface or summit of the mountain is a stratum of limestone, inclined very considerably from the horizon: beneath this is a layer of schistus, containing the sort of marble called Cipolino, that is to say, a mixture of schistus and marble: then occurs the cavity which forms the grotto, parallel to the dipping inclination of the superior strata; and this cavity was once probably occupied by another stratum, succeeding in regular order to the superincumbent schistus: but this is mere hypothesis; and any traveller

CHAP. II.

Mode of Descent.

Description of the Interior.

who enters the grotto will soon perceive, that all the theories he may form have been set at nought by Nature, in the darksome wonders of her subterraneous laboratory. The mode of descent is by ropes, which, on the different declivities, are either held by the natives, or they are joined to a cable which is fastened at the entrance, around a stalactite pillar. In this manner we were conducted, first down one declivity, and then down another, until we entered the spacious chambers of this truly enchanted grotto. Having visited the stalactite caverns of the Gulph of Salernum upon the coast of Italy, those of Terni, and many others, . the author expected to find something similar here; but there is nothing which resembles this grotto. The roof, the floor, the sides of a whole series of magnificent caverns, are entirely invested with a dazzling incrustation, as white as snow. Columns, some of which were fiveand-twenty feet in length, pended in fine icicle forms above our heads: fortunately, some of them are so far above the reach of the numerous travellers who, during many ages, have visited this place, that no one has been able to injure or to remove them. Others extend from the roof to the floor, with diameters equal to that of the mast of a first-rate ship of the

1

124

line. The incrustations of the floor, caused CHAP. by falling-drops from the stalactites above, have grown up into dendritic and vegetable forms, which first suggested to Tournefort the strange notion of his having here discovered the vegetation of stones. Vegetation itself has been considered as a species of crystallization¹; and as the process of crystallization is so surprisingly manifested by several phænomena in this grotto, some analogy may, perhaps, be allowed to exist between the plant and the stone; but it cannot be said that a principle of life existing in the former has been imparted to the latter. The last chamber into which we descended surprised us more by the grandeur of its exhibition than any other; and this seems to have been the same which Tournefort intended to represent by the wretched view of it given in his work². Probably there are many other chambers below this, yet unexplored, for no attempt has been made to penetrate farther':

(2) Voyage du Levant, tom. I. p. 227. à Lyon, 1717. A better idea of it may be formed by seeing the beautiful Plate engraved by Tilliard, from a drawing of the interior by Hilair, in the Voyage Pittoresque, tom. I. p. 74. Paris, 1782.

(3) Tournefort mentions an opening of this kind: "A côté de cette tour se voit un trou par où l'ou entre dans une autre caverne, mais personne n'osa y descendre." Voy. du Lev. tom. I. p. 231.

125

11.

ISLAND OF ANTIPAROS.

II.

CHAP. and if this be true, the new caverns, when opened, would appear in perfect splendour, unsullied, in any part of them, by the smoke of torches, or by the hands of intruders; for although, in the general whiteness of the grotto, as it now appears, the partial injuries its beauty has sustained be not at first perceived, there are proofs that, in the course of time, by the increased frequency of the visits paid to it, and the damage caused by breaking the stalactites to remove as curiosities, the splendid effect produced by the whole must be diminished. After this general description, it will now be proper to give a more philosophical detail of our observations upon its natural history.

Nature of the Stalactites.

The substance itself which is thus deposited is purely alabaster; that is to say, it is a concretion of carbonated lime which was employed by the Antients in the manufacture of their unguentary vases'; and it is distinguished by

. (1) " THERE CAME UNTO HIM A WOMAN HAVING AN ALABASTER BOX OF VERY PRECIOUS OINTMENT." Matthew xxvi. 7 .- The author found among the ruins of the city of Saïs, in Egypt, the fragment of one of the anguentary vases of the Autients : it consists of white carbonated alabaster. PLINY says, that the best alabaster was of the colour of honey, and that it was a defect in the stone to be white and translucid. The alabaster of Antiparos is of a honey colour, like to that which comes to us from Gibraltar in a manufactured state.

its chemical constituents from the alabaster of CHAP. modern times, or gypsum, which is a sulphat of . lime. The formation of the carbonated alabaster by the stalactite process is now so well known, that its explanation may be comprehended in very few words. Nothing is more common than the presence of carbonic acid in water: and when a superabundance of this acid is present, the fluid is capable of sustaining, in solution, a portion of lime carbonate; but upon the slightest agitation, or division, or exposure to atmospheric air, or change of temperature, the carbonic acid makes its escape, and the fluid, thus losing its solvent power, necessarily lets fall the lime. All this is very simple, and very easily comprehended. The paradox remains Paradoxinow to be stated: it is this; that these enor- nomenon. mous stalactites, thus formed, during a series of ages, by the slow and gradual deposition of limewater, filtering drop by drop from the roof of the cavern, offer concentric layers only towards their superficies; their interior structure exhibiting a completed crystallization, which separates, by fracture, into semi-transparent rhombs, as perfectly formed as if they had resulted from a simultaneous instead of a continuous process. Almost every mineralogist may have noticed a rhomboïdal termination of the small translucid

11.

8

ISLAND OF ANTIPAROS.

CHAP. II.

Crystallization of

Alabaster.

stalactites which are found at Castleton in Derbyshire; and there the operation has been carried on in water, a globule of which has remained constantly suspended at the point of each staclatite: but in this grotto, crystallization has been the result of a modification sustained by the whole interior of a mass of alabaster, subsequently to its original deposition. That the cavern has neither been filled with water. nor with any other fluid than atmospheric air, is very evident, by the formation of the stalactites, which could not otherwise have existed as they now appear. Every thing belonging to them, and to this cavern, will tend to perplex and to confound the naturalist; and many proofs of this are yet to follow. In the different cavities, and between the interstices of the stalactites, we had the satisfaction to discover, what no one had hitherto noticed,---THE CRYS--TALLIZATION OF ALABASTER, in distinct groups of large rhomboïdal primary crystals, upon the exterior surface of the several concretions: and that these crystals were gradually accumulating in size, until they met together and constituted one entire mass, was evident, because, upon a diligent examination of all parts of the grotto, we found, that where the stalactites were small, and in an incipient state, the crystals upon

128

their surface were exceedingly minute: where CHAP. they were large, the crystals were also large, some of them exceeding two inches in diameter. Another surprising fact is, that, although the outer crust of these crystals be opaque, and similar to the exterior incrustation of the concretions themselves, the crystals, when broken, are each, and all of them, integral parts of the stalactite upon which they have been formed. We carefully detached a great variety of specimens, to illustrate and to confirm these observations: and although the Waiwode who accompanied us, like a child craving the toy which amuses another, insisted upon having the finest specimen, under the pretext of presenting it to his ignorant patron the Capudan Pasha, we had the good fortune to bring many of these specimens to England, and to the University of Cambridge, where they have been annually exhibited during the Mineralogical Lectures. It was in that University, when the author was engaged in shewing them to the lamented Tennant, Professor of Chemistry there, that the Professor noticed among the stalactites one which was remarkably distinguished from the rest, by, its fascicular structure, by its superior hardness, and by the appearance of rays diverging from a common centre towards the VOL. VI. к

II.

ISLAND OF ANTIPAROS.

circumference¹. Its fracture is not rhomboïdal: CHAP. II. and its dispersion into a powder, by heat, exhibits the mouldering appearance of arragonite; and not the decrepitation of such particles of carbonated lime as contain water, of which specific nature are the generality of the stalactites in this grotto. From all these circumstances, Professor Tennant Arragonite. had no doubt of its being ARRAGONITE, and in the STALACTITE FORM, which had never before been noticed. Indeed, the mineral itself has been considered so rare, that were it not for the attention shewn to it in consequence of its being the only anomaly in Hauy's theory of crystallization, very little of its chemical history would be known; nor can there be a greater inducement now offered to naturalists to visit the Grotto of Antiparos, than the discovery thus made of a new locality of this curious substance. Another singular circumstance in the nature of the grotto is, that the incisions made by persons who have formerly inscribed their names in the alabaster, have been filled up by a natural process; and the letters, so marked, have since protruded, in relief, from the surface of the

⁽¹⁾ A similar formation was noticed by TOURNEFORT: "Distinguez par six cercles concentriques, dont les fibres vont du centre à la circonference." (Voy. du Lev. tom. I. p. 228. Lyon, 1717.) It is remarkable that the same writer denies the dropping of water in the grotto-"Il ne tombe pas une seule goutte d'eau dans ce lieu." Ibid.

stone; which has hitherto received no explanation. Some Greek inscriptions, near the entrance, prove that the grotto was visited in a very early period. One of them, which Tournefort has preserved very entire, mentions, that a number of persons, whose names are subscribed, "came thither during the administration of CRITON." In the present copy, the dotted letters have been supplied from that author *.

ISLAND OF ANTIPAROS.

CHAP. II.

ventured into this cavern'. During Christmas, in the year 1673, he caused mass to be celebrated in the grotto, at midnight; remaining here three entire days, accompanied by upwards of five hundred persons. The cavern was then illuminated by four hundred lamps, and one hundred large wax flambeaus; the elevation of the host was accompanied by the music of trumpets, hautboys, fifes, and violins, as well as by the discharge of artillery placed at the entrance of the cavern. Two Latin inscriptions yet record this subterraneous solemnity, which may be considered as ascertaining the epocha of the first visit paid to the grotto in modern times. In the words which the Ambassador caused to be inscribed upon the base of the stalagmite which supplied him with an altar for the occasion, we have a striking example of the Roman-Catholic faith, as to the miraculous. presence of the MESSIAH in the consecrated wafer :

HIC · IPSE · CHRISTVS

(1) "Monsieur le Marquis de Nointel, ayant entendu dire, qu'it y avoit dans l'autre isle voisine, nommée Antiparos, une grotte où personne n'osoit entrer, y voulut descendre la veille de Noël. Je m'offris à l'y accompagner," &c. L'Etat present de l'Archipel, de Mons. M. D. L. à Cologne, 1678. p. 65. Première Partie.

RETURN TO PAROS.

The channel between the two islands is not more than a mile wide: but it is two leagues from the port of Antiparos to that of Paros. It was this distance which convinced Tournefort that Antiparos is the island called Oliaros, or oliaros, Olearos, by the Antients. We returned to Paros highly gratified by our very interesting expedition, and carefully packed the specimens we had collected.

CHAP. II.

Wednesday, October the twenty-first. This day we set out, upon mules, for the antient quarries of the famous Parian marble, which are situate about a league to the east of the town, upon the summit of a mountain, nearly corresponding in altitude with the situation of the Grotto of Antiparos. The son of our host, a young married man, accompanied us. We rode through several olive plantations in our ascent: the fruit of these trees was the sole topic of conversation with our worthy guide, who spoke of a ripe olive as the most delicious dainty which Heaven had vouchsafed to man upon earth; giving him greater strength, vigour, and agility, than any other kind of food. "Oh!" said he, smacking his lips, "how we feast at my father's, when olives first come into season." The mountain in which the quarries are situate, now called

Quarries of Parian Marble.

CHAP. Capresso, is believed to have been the Mar-II. pessus mentioned by Servius² and by Stephanus Marpessus. Byzantinus³: there are two of those quarries. When we arrived at the first we found in the

When we arrived at the first, we found, in the mouth of the quarry, heaps of fragments detached from the interior: they were tinged, by long exposure to the air, with a reddish ochreous hue; but, upon being broken, exhibited the glittering sparry fracture which often characterizes the remains of *Grecian* sculpture: and in this we instantly recognised the beautiful marble which is generally named, by way of distinction, the *Parian*; although the same kind of marble be also found in *Thasos*⁴; and it is remarkable that the inhabitants of *Thasos* were a *Parian* colony⁵. The marble of *Naxos* only differs from the *Thasian* and *Parian* in exhibiting a more advanced state of *crystallization*. The peculiar excellence of

(4) For this remark the author is indebted to Mr. *Hawkins*, the publication of whose *Travels in Greece* has long been anxiously expected, by all who know the industry of his researches and the superior accuracy of his observations.

(5) 'Tπο δι Παείων ιπτίσξη Θάσος. Strabon. Geog. lib. x. p. 711. Oxon. 1807.

the Parian is extolled by Strabo⁶; and it possesses some valuable qualities unknown even to the Antients, who spoke so highly in its praise 7. These qualities are, that of hardening by exposure to atmospheric air (which, however, is common to all homogeneous limestone), and the Cause of consequent property of resisting decomposition lence of through a series of ages,-and this, rather than Marble in the supposed preference given to the Parian Sculpture. marble by the Antients, may be considered as the cause of its prevalence among the remains of Grecian sculpture. That the Parian marble was highly and deservedly extolled by the Romans, has been already shewn: but in a very early period, when the Arts had attained their full splendour in the age of Pericles, the preference was given by the Greeks, not to the marble of Paros, but to that of Mount Pentelicus; because it was whiter; and also, perhaps, because it was found in the immediate vicinity of Athens. The Parthenon was built entirely of Pentelican marble. Many of the Athenian statues, and of the works carried on near to Athens during the administration of Pericles, (as, for

CHAP. II.

example, the Temple of Ceres at Eleusis,) were executed in the marble of Pentelicus. But the finest Grecian sculpture which has been preserved to the present time is generally of Parian marble. The Medicéan Venus, the Belvidere Apollo, the Antinous, and many other celebrated works, are of Parian marble; notwithstanding the preference which was so early bestowed upon the Pentelican : and this is easily explained. While the works executed in Parian marble retain, with all the delicate softness of wax, the mild lustre even of their original polish, those which were finished in Pentelican marble have been decomposed, and sometimes exhibit a surface as earthy and as rude as common limestone. This is principally owing to veins of extraneous substances which intersect the *Pentelican* quarries, and which appear more or less in all the works executed in this kind of marble. The fracture of *Pentelican* marble is sometimes splintery, and partakes of the foliated texture of the schistus which traverses it; consequently, it has a tendency to exfoliate, like cipolino, by spontaneous decomposition.

We descended into the quarry, whence not a single block of marble has been removed since the island fell into the hands of the *Turks*: and perhaps it was abandoned long before; as

might be conjectured from the ochreous colour CHAP. by which all the exterior surface of the marble is now invested. We seemed, therefore, to view the grotto exactly in the state in which it had been left by the Antients : all the cavities, Marvellous cut with the greatest nicety, shewed to us, by Antients the sharpness of their edges, the number and ing the the size of all the masses of Parian marble which had been removed for the sculptors of Antient Greece. If the stone had possessed the softness of potter's clay, and had been cut by wires, it could not have been separated with greater nicety, evenness, and economy. The most evident care was everywhere displayed that there should be no waste of this precious marble: the larger squares and parallelograms corresponded, as a mathematician would express it, by a series of equimultiples with the smaller, in such a manner that the remains of the entire vein of marble, by its dipping inclination, resembled the degrees or seats of a theatre. It was impossible to view such a source of materials which had exercised the genius of the best Grecian sculptors, without fancying that we could ascertain the different works for which the several masses had been removed. "Here," said we, "were slabs for metopes and triglyphs; there, were blocks for altars and Doric capitals; here was an Apollo;

Skill of the in work-Quarries.

CHAP. there, a Venus; that larger cavity may have supplied a mass for a Laocoön; from this place they perhaps removed a soros; the columns taken hence had evidently divided shafts, there being no cavity of sufficient length to admit the removal of entire pillars." . These and similar observations continually escaped us: but who shall explain the method used by the Antients in hewing, with such marvellous precision, and with such apparent ease, the interior of this quarry, so as neither to leave one casual fracture, nor anywhere to waste its produce? They had very little knowledge of machinery; but human labour was then of little value, and the most surprising works may always be referred to ages when this was easily obtained.

We quitted the larger quarry, and visited another somewhat less elevated. Here, as if the Antients had resolved to mark for posterity the scene of their labours, we observed an antient bas-relief upon the rock. It is the same Bas-relief. which Tournefort describes'; although he erred in stating the subject of it. It is a more curious relic than is commonly supposed. The French have twice endeavoured to remove it, by sawing the marble behind; but perceiving that it would

(1) Voy. du Lev. tom. I. p. 239. à Lyon, 1717.

TI.

separate into two parts if they persisted, owing to a fissure in the stone, they had the good taste to abandon the undertaking. It represents, in three departments, a festival of Silenus, mistaken by Tournefort for Bacchus. The demigod is figured, in the upper part of it, as a corpulent drunkard, with ass's ears, accompanied by laughing satyrs and dancing-girls. A female figure is represented sitting, with a fox sleeping in her lap. A warrior is also introduced, wearing a Phrygian bonnet. There are twenty-nine figures; and below is this inscription:

ΑΔΑΜΑΣ ΟΔΡΥΣΗΣ ΝΥΜΦΑΙΣ

which may be thus rendered into English ; Explana-"ADAMAS ODRYSES TO THE NYMPHS."

tion of the Inscription.

(2) Tournefort, in his remarks upon this inscription, maintains, from Diod. Sic. Biblioth. Hist. lib. iii. and from the Adversaria of Barthius, that the word Núu quis applied to the girls of the island, rather than to those 'female divinities who were called Nympha: to which opinion the author, perhaps, too hastily assented, when, in the first edition. he rendered the word Nupquis, " To the lasses," or betrothed maidens. The words of Barthius are : "Græcis intermedia inter virginem et mulierem vuppn, quod eleganter discas ex Theocrito sive Moschum mavis fine EUROPÆ:

"H di magos zoven, Znois yisse autiza vuuqn, Kal Keosidy Tinna Tinte, zal autiza gisste untup." Barthii Adversar. lib. xxvi. cap. 4. Francof. 1624. But Valckener has the following observation upon the conclusion of the EUROPA :

CHAP. II.

-

CHAP. II.

Chandler, in his Travels in Greece, describes the - Nymphæum near Vary in Attica; and gives three inscriptions', one of which purports that "Archidamus made the Cave for the Nymphs." In another inscription, found in the same Cave of the Numphs, the latter part, whether designedly or not, is an Iambic trimeter². In the Corycian Cave, the existence of which was discovered by the author in a subsequent part of these Travels, although he did not then visit the place³, some of his friends found an inscription to Pan and the Nymphs⁴; therefore this kind of dedication was common in Greece. The marble in both these quarries was excavated by the light of lamps; and to this circumstance Pliny attributes one of its names, Lychnites⁵. The

(4) Πατιτόμφαις: The inscription was discovered by Mr. (now Sir William) Gell. Mr. Raikes found also here a small terra-cotta vessel, elegantly formed, which the Antients had left, as a vow, in the cave.

(5) "Omnes autem candido marmore usi sunt è Paro insula, quem lapidem cœpere LYCHNITEN appellare, quoniam ad lucernas in cuniculis cæderetur." Plin. Hist. Nat. lib. xxxvi. c. 5. tom. 111. p. 468. L. Bat. 1635.

same appellation occurs also in Athenæus⁶. With regard to the image of Silenus, in the basrelief, it has never been observed that Pliny mentions it, as a natural curiosity, and one of the marvels of Antient Greece. The figure of Silenus was accidentally discovered, as a lusus Naturæ, in splitting the rock; and, of course, all the other parts of this piece of sculpture had been adjusted by Odryses to assist the representation, when he dedicated his work to the Nymphs. Such a method of heightening and of improving any casual effect of this kind has been very common in all countries, especially where the populace are to be deluded by some supposed prodigy: and thus the cause is explained why this singular piece of sculpture, so rudely executed, yet remains as a part of the natural rock; whence it would be an act of worse than Gothic barbarity to remove it. "A wonderful circumstance," says Pliny', "is related of the Parian quarries. The mass of entire Evidence stone being separated by the wedges of the workmen, there appeared within it AN EFFIGY OF SILENUS." In the existence of this bas-relief

it affords ...

as an integral part of the natural rock, and in the allusion made to it by *Pliny*, we have sufficient proof that these were antient quarries'; consequently they are the properest places to resort to for the identical stone whose colour was considered as pleasing to the *Gods*^{*}, which was used by *Praxiteles*³, and by other illustrious *Grecian* sculptors, and celebrated for its whiteness by *Pindar*⁴ and by

(1) This curious bas-relief, together with the entrance to the quarry which contained it, are represented in the Voyage Pittoresque of Count de Choiscul Gouffier, (Voyage Pittoresque de la Grèce, tome I. p. 68. Paris, 1782.) but with more attention to the effect of a beautiful picture than to accuracy of design. The plates in this magnificent work are almost equal, in their style of composition, and in their execution, to the engravings of Audran, from paintings by Le Brun; and that to which allusion is now made is faithful in every thing, except in the detail of this piece of antient sculpture. A reference to the French work will, however, serve to shew its situation in the quarry, and render unnecessary any further attempt at delineation, where the manner of it must necessarily be so very inferior. The antiquity itself is the greatest curiosity in the island; and perhaps, from the circumstance which Pliny has mentioned, it will excite the attention of travellers more than it has hitherto doue.

CHAP.

Theocritus⁵. We collected several specimens: in breaking them, we observed the same whiteness and brilliant fracture which characterizes the marble of Naxos, but with a particular distinction before mentioned—the Parian marble being harder, having a closer grain, and a less foliated texture. Three different stages of crystallization may be observed, by comparing the three different kinds of marble, dug at Carrara in Italy, in Paros, and in Naxos; the Carrara marble being milk-white⁶ and less crystalline than the Parian; and the Parian whiter⁷ and less crystallized than the Naxian: lastly, as a completion of the process of crystallization, may be mentioned the

(5) Theoretius (Idyll. vi. 38.) compares the whiteness of teeth with Parian marble:

(6) Pliny mentions the superior whiteness of the Carrara marble, in comparing it with the Parian. The quarries of Carrara are the Lunensian of that author; Luna being the name of a city, and Lunensis that of a promontory near to the modern Carrara. "Multis postea candidioribus repertis, nuper etiam in Lunensium lapidicinis." Plin. Hist. Nat. lib. xxxvi. c. 5. tom. 111. p. 468. L. Bat. 1635.

(7) Although the *Parian* were not the *whitest* marble known to the Antients, as appears by the preceding Note, yet its *whiteness* was one cause of its great celebrity. It is thus described in the *Itinerary* of *Antoninus*:

INSVLA PAROS IN HAC LAPIS CANDIDISSIMVS NASCITVR QVI DICITVR PARIVS. 143

Theory of Crystallization.

stalactites, or alabaster, of Antiparos; in which the same chemical constituents are perfectly crystallized; exhibiting the rhomboïdal fracture, and having the specific gravity of the Iceland spar; which, in all probability, is also a stalactite. These phænomena oppose striking facts to the Plutonian theory of the crystallization of carbonated. lime by means of heat and pressure: not that the author wishes to maintain any argu-" ment against the possibility of crystallization by means of heat, because all that seems necessary for crystallization is a separation of particles, and a subsequent retreat. Whether this separation be effected by solution, or by fusion (which is only another' name for solution); and whether the retreating body be an aqueous fluid or the fluid matter of heat; a regularity of structure may equally become the result: basaltic forms have been recognised in the bottom of a furnace'; as well as upon the borders of a lake². The facts now adduced are opposed, it is true, to the Plutonian theory; because they prove the

VOYAGE TO SYROS.

Athens - Zoster Promontory - Doubtful Story of Minerva's Statue - Arrival at the Piræeus-Approach to Athens.

FROM the quarries of MARPESSUS we descended again to Parechia; and the next day, the wind being favourable, although somewhat boisterous, we embarked, and set sail for SyROS, Voyage to now called Syra. Our Captain would have steered for DELOS: but this island, since the visit paid to it by the Russians, has been stripped of all its valuable antiquities; besides this, the gale we had encountered between Patmos and Naxos had somewhat intimidated us; and as our crazy old caïque was not sea-worthy, we resolved to run for the most western port in our course towards the Sinus Saronicus, now called the Gulph of Engia, from a modern name of the Island of ÆGINA. We saw the Delian Isles, as we passed with a rapidity known only to the swallows' of the Archipelago, and entered the harbour of Syra in the morning of October the twenty-second. Our faithful Greek servant, who had travelled with us as our interpreter ever since we left

Affecting Interview. Petersburg, burst into tears at the sight of a small chapel constructed upon a rock in the port, which he had himself assisted in building He described it as the some years before. votive offering of a party of young Greeks to their patron Saint: but his feelings experienced a severer trial when we landed; for in the person of an old man, established as a wineseller upon the quay, he recognised his own father, of whose fortunes and situation he had long been ignorant. The islanders bore a part in the joy of this meeting; and their national hospitality was, in consequence, redoubled. All the young people came to express their congratulations, and a party began the Roméca1. Antonio hastened again on board for his balalaika*, and, joining the festive throng, gave himself up entirely to singing and dancing for the remainder of the day and night. Towards evening, we

⁽¹⁾ The Roméca, the most popular of all the dances of the Modern Greeks, is faithfully and beautifully represented in the Voyage Pittoresque de la Grèce of Count De Choiseul Gouffier, from a drawing by J. B. Hilair, engraved by Martini. See Plate facing p. 63. vol. I. of that work, Paris, 1782. "The passion of the Greeks for dancing," (says Mons. De Guys, vol. I. p. 203. Lond. 1781,) " is common to both sexes; who neglect every other consideration, when they have an opportunity of indulging that passion."

saw him in the midst of a very numerous choir, inviting us to taste of the wine with which his father was making libations to all comers.

The town of Syra is built upon the summit of Syra. a lofty hill, so remarkable for its conical form that it may be compared to a vast sugar-loaf covered with houses. At the base of this cone is the quay, where there are several warehouses for supplying vessels with the produce of the island, which is principally wine. There are some ruins near the port; and many antient marbles are said to remain buried behind the magazines. We met the English Consul soon after we landed, and accompanied him to his house in the town; where we were regaled with an excellent conserve, highly esteemed by the Greeks, made of the apples (as they are called) of a species of Sage, the Salvia pomifera : these apples are produced in the same manner as galls upon the oak, and they are owing to punctures made by a species of Cynips in the branches of the plant. The common Sage of the Island of *Crete* has the same excrescences: which are there carried to market under the name of Sage-apples³. This conserve is said to

Plants.

possess the healing and salutary quality of Sage in general: we perceived in it an agreeable astringent, and somewhat bitter flavour; but as almost any vegetable may be used for conserves, and the savour is often owing to other ingredients, very little of this taste might be owing to the Sage. The plant itself thrives abundantly upon this island, growing to the size of a small shrub. Sage leaves are collected annually by the Greeks, and dried, to be used medicinally, as an infusion: they are very particular in the time and manner of collecting these leaves; they are gathered on the first of May, before sun-rise. The flavour and smell of the Grecian Sage is much more powerful than in the Salvia officinalis, so common in the English gardens. We sometimes drank an infusion of the leaves, instead of tea: it had the effect of exciting a profuse perspiration, and perhaps may be useful in those dangerous obstructions to which perspiration is liable in an Eastern climate; but it produces languor, and even faintness, if it be used to excess. In mentioning the plants of Syra, there is one of so much beauty and rarity, that it ought not to pass without especial notice : it is called the Tree Pinh, DIANTHUS ARBOREUS, and pre-eminently merits its lofty name of $\Delta IO\Sigma ANOO\Sigma$. It grows

also in Seriphos: but Syra is the only place in all Greece whence we were able to obtain . specimens; and we did not find these ourselves upon the island ¹. Perhaps the season was too far advanced to observe this beautiful ornament of the Grecian Isles; for we were unable to find many other rarities which have been described as natives of Syra, although we remained two days in search of them, particularly the plant which produces the Persian Manna, mentioned by Tournefort², Hedysarum Alhagi. The Dianthus arboreus, both in Syra and in Seriphos', sprouts out of the crevices of the most rugged and otherwise barren rocks. It was raised from seed in the Royal Garden at Paris, in the time of Tournefort; "where," says this author 4, "it has sustained no change by its altered situation, but maintains the honours of Greece

(1) We were indebted for them to the kindness of Mr. Dodwell, who visited Syra, in company with Sir William Gell. The former has since distinguished himself by his indefatigable researches in Greece, particularly by the attention he has bestowed upon the antient sepulchres of the country.

(2) Tournefort, Voyage du Levant, tom. II. p. 4. Lyon, 1717. It . is the Alhagi Maurorum of Rauwolf. Sir George Wheler found it in Tenos. Manna is found on this plant, in Mesopotamia, and in other Eastern countries. (See Russel's Aleppo.) It grows plentifully near Tauris.

CHAP. III.

CHAP. amidst an infinite number of rare plants from the same country." No traveller has yet added this very uncommon species of Dianthus to the botanic gardens of our island.

> There is no other town or village upon the island excepting this, which so singularly covers the sugar-loaf hill above the quay; and the number of inhabitants does not exceed four thousand, almost all of whom profess the Catholic religion : yet there is no part of the Archipelago where the traveller will find the antient customs of Greece more purely preserved. Syros was the original name of the town, as well as of the island. Some traces of its ruins still exist near the port. The modern town of Syra probably occupies the site of the antient Acropolis. The island has always been renowned for the advantages it enjoys, in the excellence of its port, in its salubrity, and its fertility. It is on this account extolled by Homer¹. It produces wine, figs, cotton, barley, and also wheat, although not so plentifully as barley. We saw an abundance of poultry, and a very fine breed of pigs; but the streets of the town are as dirty and as narrow as they probably were in the days of Homer. If

Remains of antient Customs.

152

III.

the antient Persians have been characteristically described as the worshippers of fire, the inhabitants of Syra, both antient and modern, may be considered as the worshippers of water. The old fountain, at which the nymphs of the island assembled in the earliest ages, exists in its original state; the same rendezvous as it was formerly, whether of love and gallantry, or of gossiping and tale-telling. It is near to the town, and the most limped water gushes continually from the solid rock. It is regarded by the inhabitants with a degree of religious veneration; and they preserve a tradition that the pilgrims of old time, in their way to Delos, resorted hither for purification. We visited the spot in search of an Inscription mentioned by Tournefort², but we could not find it: we saw. however, a pleasing procession, formed by the young women of the island, coming with songs, and carrying their pitchers of water on their. heads, from this fountain. Here they are met by their lovers, who relieve them from their burdens, and bear a part in the general chorus. It is also the scene of their dances, and therefore the favourite rendezvous of the youth of. both sexes. The Eleusinian women practised a

(2) Tournef. Voy. du Lev. tom. II. p. 4. Lyon, 1717.

CHAP. III.

CHAP III.

dance about a well which was called Callichorus. and their dance was also accompanied by songs in honour of Ceres. These "Songs of the Well" are still sung in other parts of Greece as well as in SYRA. De Guys mentions them. He says that he has seen the young women in Prince's Island, assembled in the evening at a public well, suddenly strike up a dance, while others sung in concert to them¹. The Antient Poets composed verses which were sung by the people while they drew the water, and were expressly denominated "Songs of the Well." ARISTOTLE, as cited by Winkelmann, says the public wells serve as so many cements to society, uniting the people in bands of friendship by the social intercourse of dancing so frequently together around them². This may serve to explain the cause of the variety of beautiful lamps, pitchers, and other vessels of terra cotta, which have been found at the bottom of wells in different parts of Greece; as well as to direct the attention of travellers towards the cleansing of dry wells, who are desirous of procuring those valuable antiquities. Among other antient customs still existing in SYRA, the cere-

(2) Ibid.

⁽¹⁾ Letters on Greece, vol. I. p. 220. Lond. 1781.

monies of the vintage are particularly conspicuous. Before sun-rise, a number of young women are seen coming towards the town, covered with the branches and leaves of the vine; when they are met or accompanied by their lovers, singing loud songs, and joining in a circular dance. This is evidently the orbicular choir' who sung the Dithyrambi, and danced that species of song in praise of Bacchus. Thus do the present inhabitants of these islands exhibit a faithful portraiture of the manners and customs of their progenitors: the ceremonies of Antient Greece have not been swept away by the revolutions of the country: even the representations of the theatre, the favourite exhibitions of the Attic drama, are yet beheld, as they existed among the people before they were removed from the scenes of common life to become the ornaments of the Grecian stage.

Some very fine gems and medals were shewn Gems and to us by a native of Syra: but the price he demanded for them exceeded all moderation. One of the gems was of high antiquity. It was an intaglio of red jasper; the subject, Pegasus.

Medals.

155

CHAP.

CHAP. III. with wings inflected towards the head, in the most antient style of the art; a boar was also introduced, with the singular representation as as of a battering ram projecting from its breast. Among the medals there were two of silver, in good preservation. The first was of Chios: it exhibited, in front, a winged sphinx; and for reverse, the diota, with this legend, $APFEIO\Sigma \cdot XIO\Sigma$. The other was very small, but of extraordinary beauty; probably it was of Clazomenæ in Ionia, and possibly of Citium in Cyprus'. The head of a youthful Deity appeared in front, in very high relief; and the reverse, equally prominent, exhibited the image of a ram couched. Among all the subjects represented upon Grecian medals, nothing is more rare than the figure of this very common quadruped. Almost every other sacred animal may be observed: but the sheep, so often the object of sacrifice, not only seldom occurs, but when it has been found upon an antient medal, it is always upon one of the highest antiquity, destitute of any legend, and which generally classes, in numismatic collections, among coins of uncertain or of unknown origin. The cause of this has not been explained.

(1) See the Vignetle to Chap. II. Vol. IV. of the 8vo. edition of these Travels.

The minerals of Syra are rather remarkable; considering the prevalence of limestone among the Grecian Isles. We found fragments of green steatites and schistus containing garnet. The mercury in Fahrenheit's thermometer stood at 75° at noon, on the first day after our arrival, and at 78° upon the second; which is the average temperature of the city of Naples, during the summer months, situate above three degrees nearer to the pole: and as the climates both of Italy and Greece are very regular, this autumnal temperature in Syra is about commensurate to State of the Island. the difference of latitude. There is not a Turk to be found upon the island : its inhabitants are all Greeks; and as they profess the Catholic religion, it might have afforded a comfortable asylum for many of those expatriated Frenchmen who were driven by the calamities of their country all over the Levant; some of whom we had seen in places of residence less suited to their circumstances, and where they were exposed to inconveniences which they would not have' encountered in this healthy and wealthy island.

Saturday, October the twenty-fourth, a light Voyage to wind tempted us to weigh anchor at three A. M. intending to sail for CEOS, now called Zia. After we left the port, we were becalmed : but

Gyarus:

CHAP. III.

CHAP.

about eight, we found ourselves to be near to the Island of TENOS; and at nine, the wind coming aft, we bore away for GYARUS, now called Jura. After we had doubled the northern point of Syra, we saw the Promontory of EUBŒA, called Carpharée; also ANDROS, Jura; and Zia. Jura is only twelve geographical miles from the nearest point of Syra; it is now almost uninhabited; but we were curious to visit a spot alluded to by Juvenal¹ as a place of banishment for *Roman* criminals: and soon afterwards we landed. The Master of our caïque wished to sail between some rocks into the harbour; and for this purpose desired us to ascend the heights, and point out a passage for the vessel. When we had done this, we clearly discerned the rocks below the surface, and were much amazed at the very great depth in: the water which our situation enabled us to view. Being within hearing of the crew, we called to them, and gave them instructions how to steer; by which means the caïque was conducted through a gorge where none but Greek sailors would think of venturing. While we were in this situation, looking down upon the vessel and the harbour, there came suddenly

(1) "Aude aliquid brevibus Gyaris et carcere dignum." Juv. Se

BAY OF JURA.

round the northern point of the island a long narrow open boat, like a dart, filled with mari-Hydriots, ners, believed by our sailors to be Hydriots, to the number of thirty or forty, all plying their oars; who presently landed, removed from the rocks some spars which they had previously left there, and, pushing out again to sea, disappeared with the same surprising velocity with which they had arrived. We saw their little bean-cod, as it were instantaneously, reduced to a speck upon the waves: and while we were admiring the dauntless intrepidity with which these men, in a bark that could be compared only to a long canoe, ventured to cross such a dangerous sea, our Captain arrived; who said we might thank our good stars that they did not plunder our vessel of every thing she contained. He added, that there was not a part of the Archipelago which the Hydriots would not traverse in such a boat, venturing in all weather, and braving the most tempestuous seas: and the only reason he could give for their not having attacked our caïque was, that he believed they did not see it; for it had not cleared the passage of the rocks before they left the harbour. We remained in the Bay of Jura during the rest of this day, and the following night. The few inhabitants of this desolate spot,

159

BAY OF JURA.

believing us to be pirates, were afraid to CHAP. approach; so that although we saw a few traces, as of human beings, upon the island, not one of them appeared. We collected a few plants and minerals. The mountain around the bay, and especially that part of it which extends in the same line of direction as Syra, consists of schistus, containing masses of quartz, exhibiting a beautiful contrast of colour. We found some quartz crystallized, and also crystals of carbonated lime. Tournefort describes, Jura as the Wretched most barren and disagreeable spot in the Archipelago, and says its plants are all of them common. It is not more than four leagues in circumference. In the time of Strabo, and indeed in all ages, its poverty and wretchedness were proverbial; and, while a less contemned spot hardly obtains from that author any other notice than the introduction of its name, GYARUS, from the supremacy of its indigence, occupies a more considerable portion of his regard'. A mean and miserable village, inhabited solely by fishermen, was the only settlement at that time upon its barren rocks: he mentions their embassy to Augustus, who was at Corinth, after the battle of Actium, praying a

condition

of Jura.

BAY OF JURA.

diminution of their annual tribute, which they were unable to pay; and he cites the antient poet Aratus, to shew how long the poverty of the island had been its only distinction². Tournefort has countenanced the story related by Pliny³ of the expulsion of its inhabitants by rats, or by field-mice; affirming that he saw some large animals of this kind, which were probably of the antient race⁴. Instead of the field-mice, we saw plenty of sheep and goats belonging to the people of Syra; yet the existence of the animals mentioned by Pliny is attested by many authors, some of whom pretend that, driven by hunger, the mice have been constrained to gnaw the iron ore taken from the mines⁵; a most

VOYAGE TO ZIA.

improbable story: but we perhaps learn from it the reason why exiles were sent hither by the *Romans*; the labour of *mining* having been antiently, as it is now in many countries, a punishment allotted to state criminals: however, we perceived no traces either of the *mineral* thus alluded to, or of the works carried on for its excavation.

Voyage to Zia. We left Jura for ZiA, October the twenty-fifth, the weather being calm. As we drew near to ZïA, there sprung a fresh breeze, and our sailors endeavoured to steer the caïque into what they believed to be the harbour of the island, at its northern extremity. Fortunately, we had a small compass, and a copy of Tournefort's travels, the accuracy of whose maps we had before proved; and, finding that neither our Captain nor any one of the Casiot crew knew any thing of the coast, the author undertook to pilot the vessel into a harbour which he had never seen, and actually by the aid of charts which have neither soundings nor bearings'. As soon as we had doubled the northern point of the island, the wind freshened apace; but it came entirely aft, with a heavy sea, which drove

us before it with great rapidity down the channel between Zia and the island lying off CAPE SUNIUM, antiently called HELENA, and now Macronisi. Presently, the mouth of the port which is on the western side of Zia, opposite to Helena, began to appear: but we stood on, so as to clear any rocks which might be on its northern side, and to have a full view of the entrance, which is between the West-North-West, and West; and then we luffed, and stood towards it. In this manner we entered the port, about noon, in perfect safety; and found there a Ragusan ship at anchor. It is a very large and commodious haven, fit for ships of any burden, and even for the largest fleets. It extends, in an elliptical form, from the north towards the south: the best anchorage is upon the southern side, but small vessels may anchor anywhere. The great article of commerce belonging to the island, now exported from this harbour, consists of the acorns of the Velani Oak², Quercus Ægilops, used for dyeing. A kind

163

⁽²⁾ Tournefort describes this beautiful species of oak as growing to the size of our common oak, the Quercus Robur. We never observed the Quercus Ægilops but as a shrub; however, the accuracy of such a writer as Tournefort is by no means to be disputed, upon a point that he was so peculiarly qualified to determine. The Velani acorns which we brought to the Botanic Garden at Cambridge, although collected with the utmost care, did not produce a single plant.

CHAP. of cloak made of goat's hair, which is sold in the port, is said by *Tournefort* to be manufactured in Zia: but in this he was mistaken; for those cloaks are brought to Zia from the Isle of *Joura*, pronounced Zoura, near Salonica. There has been a great defalcation in the sale of the Velani acorns: formerly they sold for forty pounds sterling the quintal; and when we arrived, the dealers in this article were glad to get fifteen pounds sterling for the same quantity. The produce of the island in these acorns alone amounts annually to fifteen thousand quintals.

> It being Sunday, we found nobody at the quay, and therefore set off for the town, and the only one upon the island; it is at the distance of three miles from the harbour: we passed through a valley towards it, and afterwards ascended to the hill on which it stands. It is built upon the site of the antient Carthæa, after the manner of the town of Syra, but in the form of a theatre, and upon a much higher mountain; the houses being erected in terraces one above another, so that the roofs of a range of dwellings below serve as a street to another range above. Those streets, as at Syra, are beyond description filthy. Such a singular

Carthaa.

manner of building gives to the place a very novel and extraordinary appearance. The citadel is upon the left, to a person entering by the narrow pass that leads to the town; and here, says Tournefort', sixty Turks, armed only with two muskets, defended themselves against the whole Venetian army. The ravages com- Ravages mitted by the Russians, when their fleet visited by the this island during the reign of Catherine the Second, were even yet the subject of conversation. The inhabitants told us that their houses were entirely stripped by them.' The specious promises which they held out to the people of Greece are now seen in their true light by that people, and they will not again become the dupes of any Scythian treaty. Sonnini says they had rendered the very name of Liberty so odious at Paros, that the inhabitants would hear no proposals for their deliverance from the power of the Turks; they preferred Turkish despotism to Russian emancipation. "Armed," says he[°], "in appearance for the purpose of restoring to the Greeks their antient liberty, they (the Russians) became their scourge." Surely the examples of national perfidy they have afforded

CHAP. III. will not be lost upon the Cabinets of Europe. It was not the property of the natives alone which suffered upon this occasion: the Russians removed or destroyed the most valuable antiquities; which could not have been more effectually sacrificed if they had perished, with the plunder of the Parthenon, among the rocks of Cythera¹. The Fine Arts, which always deprecate their coming as they would another invasion of Alaric, will remember with regret the days they passed in the Archipelago: and when truth prevails over the interests of political intrigue and the prejudices of party zeal, it will be seen that an author has not erred who thus described them¹; RVSSI INTER CHRISTIANOS BARBAPΩTATOI.

The male population of Zia amounts to three thousand persons. Each house pays a tax of ten, twelve, or fifteen piastres, annually. We called upon the *English* Consul, who promised to send mules for us to the marine, if we would come the next day and dine with him; to which we consented. He informed us of a

RUINS OF IOULIS.

circumstance before alluded to, but of which we had never till then heard; namely, that the famous Oxford Marble, generally believed to have been found in Paros, was, in reality, discovered among the Ruins of Ioulis, in Ruins of the Isle of Zia, at four hours distance from the town; and he appealed to some of the inhabitants, well acquainted with the circumstance, for the truth of the fact. Those ruins are little known: Tournefort has briefly noticed them; but it remains for some future traveller to make us better acquainted with the remains of a city not only renowned as the birth-place of many celebrated men', of Simonides', of Bacchylides, of Erasistratus^{*}, and of Ariston⁶, but particularly

(3) Έκ δέ τῆς Ἰουλίδος ὅ, τε Σιμωνίδης ῆν ὁ μελοποιὸς, καὶ βακχυλίδης άδελφιδούς έχείνου. χαί μετά ταυτα Έρασίστρατος ό ίατρός, χαί των έχ του περιπάτου φιλοσόφων ' Αρίστων, δ του βορυσθενίτου βίωνος ζηλωτής. Strab. Geog. lib. x. p. 710. Oxon. 1807.

(4) The antient name of Zia, REOY, called KIA by Ptolemy, was sometimes abbreviated, and written KOZ; and, owing to this circumstance, the country of the Poet SIMONIDES has sometimes been confounded with that of HIPPOCRATES. Stephanus Byzantinus uses the word KOE to signify KEOE, in speaking of the city Ioulis. 'Ioulis mould with Ko. (Vid. Steph. Byzant. Geog. L. Bat. 1694.) Among the Romans, it was also usual to abbreviate Céos by writing Cos. PLINY says the island had been called Ceos, and in his time Cea.

RUINS OF IOULIS.

CHAP. III. entitled to a careful examination, from the circumstance of the discovery there made of this important chronicle, so long believed to owe its origin to Paros. A place which has been hitherto little regarded, as lying remote from common observation, where the soil has never been turned, nor hardly a stone removed from the situation in which it was left when the city was abandoned by its inhabitants, may well repay the labour and the expense necessary for this purpose. The season was far advanced at the time of our visit, and our eagerness to get to Athens so paramount to every other consideration, that we did not choose to delay our voyage thither, by making a visit to these ruins; which we have ever since regretted. Some notion may be formed of their magnitude, and the degree of consideration in which they were held by Tournefort, from the manner in which he introduces his account of them, after describing the remains of Carthæa1: and with regard to the valuable chronicle which the present inhabitants of Zia maintain to have been

(1) "POUR VOIR QUELQUE CHOSE DE PLUS SUPERBE, il faut prendre la route du sud sud-ést," &c. Voy. du Lev. tom. II. p. 15.

by Strabo as a native of CEOS, was a Peripatetic; the second was a Stoic, and a native of CHIOS: they have been confounded together, and it has been proposed to read 'Agioroup Kills for Xios.

found at Ioulis, there is something like an internal evidence of the fact in the remarkable records preserved upon the marble itself; not only with regard to Simonides the poet, who was a native of the city, but also of his descendant Simonides son of Leoprepis, who explained at Athens the principles of a Munucouzov, or scheme for artificial memory, of which he was the inventor. The antient road from Ioulis to Carthæa, the finest thing of the kind, says Tournefort², which perhaps can be found in all Greece, yet exists. He traced it for three miles in extent, flanking the sides of the hills, and sustained by a strong wall, of which the coping consisted of immense blocks of a grevish stone, having the property of splitting like the slate used in the Grecian Isles for covering houses and chapels. The remains of Ioulis are now called $\Pi OAI\Sigma$ by the inhabitants of Zia. They cover the top of a promontory, to the southsouth-east of the present town; the base of which is washed by the sea, although it were a league distant from it in the time of Strabo. The ruins of the Acropolis are upon the point of the Cape; and somewhat farther from the shore the temple is conspicuous, in the magnifi-

III.

CHAP. cence of its remains: those of the city extend from the hill quite into a valley which is _ watered by the streams of a fountain whence Ioulis received its name. " Never," observes the author now cited¹, "have I seen such masses of marble employed in architecture, as those used for constructing the walls of this city; some of the blocks are more than twelve feet in length." The British Consul told us. that the head of the fine Torso represented in Tournefori's travels was carried away by an Englishman. Strabo relates, that there were once four cities upon this island, Pæeëssa, Carthæa, Caressus, and Ioulis; but that in his time the inhabitants of Paceessa had settled in Carthaa, and those of Caressus in Ioulis. He has preserved from Menander an antient and memorable law of the inhabitants of this island?: " LET HIM WHO CANNOT LEAD AN HONOUR-

(2) 'O un duráperos (n xalãs, où (n xazãs. Thus rendered by XYLANDER, " Qui non potest vivere bend, non mald moritur :" perhaps alluding to an antient custom in Zia, of putting to death aged and infirm persons. The Editor of the Oxford Strabo has disputed this interpretation ; and says the sense should be, " Qui non bene vitam agere potest, non male vitam agat." Vid. Annot. in Strabon. Geog. lib. x. p. 710. Oxon. 1807, Not. 12 .- The same law is in Ælian, lib. iii. cap. 37.

⁽¹⁾ Tournefort found the remains of an inscription upon a broken marble in a Greek chapel among the ruins, containing the word ΙΟΥΛΙΔΑ.

RUINS OF IOULIS.

ABLE, NOT LEAD A DISHONOURABLE LIFE." Ptolemy mentions three cities, instead of four; Caressus, Ioulis, and Carthæa'. From the ruins of the last of these has originated the present town of Zia, the only one in the whole island : those ruins may be traced in the valley, the whole way from the harbour to the citadel⁴. The name of this city-written KAPOAIA by Strabo and by Ptolemy, and consequently Carthæa by Latin writers-appears upon its medals, KAPOA, which is probably an abbreviation. We were Medals, fortunate in procuring several : but they were all of bronze; nor have we ever seen or heard of a silver medal either of Ioulis or of Carthæa. Those of the latter city exhibited in front a laurelled bust; and for reverse, the fore quarters either of a fawn or of a dog; in some instances with a lee below, and a semicircle of diverging rays above the head of the animal. Their legends were either K, simply, or KAPOHA; but in no instance KAPOAIA. The bee evidently refers to Ioulis, of which city this was the symbol; as appears by some bronze medals

CHAP. in the French Collection, on which the bee appears, with the legend IOYAI. Possibly, therefore, Ioulis was leagued with Carthæa, or had become tributary to it, when some of the medals were struck which we brought from the island.

Hospitality of the Modern Greeks.

An amusing adventure befel us the next day, in our search for medals. We have before had occasion to allude to the hospitality of the Greeks, to their love of festivity, and to the sort of sensation excited by the arrival of strangers among them; but perhaps the following anecdote may exhibit their national characteristics in a more striking manner than has been hitherto done. The Consul having sent his mules to the harbour, we went to visit him, as we had promised to do, and despatched messengers about the town in search of medals and gems. Towards the evening, as we were preparing to take leave of our host, a little girl arrived; who said, if we would follow her, she would conduct us to a house where several antiquities would be offered to us for sale. Being conducted towards the spot, we were surprised to meet a young lady, very splendidly dressed, who offered to us some medals, and said, if we would accompany her, she would take us to a house

TH.

where the owner kept a collection of such rarities. Presently we met a second female, nearly of the same age, and similarly habited; who addressed the first, laughing, and then literally seized one of us by the arm, bidding her companion secure the other: and in this manner we were hurried into a crowded assembly, where many of the inhabitants had been collected for a regular ball. The dancing instantly began; and being welcomed with loud cheers into the midst of the party, there was no alternative but to give up all thoughts, for the rest of the evening, of returning to our caïque, and contribute to the hilarity of those by whom we had been thus hospitably inveigled. Our conductors proved to be the two daughters of the 'Ιδιοπρόζενος, who thus honourably entertained, after the manner of his forefathers, two private strangers, whom he was never likely to see again, and from whom he could reap no possible advantage. Every species of Greek dance was exhibited for the amusement of his guests; from the bounding Morozogos or hornpipe, and the $\Delta i \chi_{0000}$ or rigadoon', to the more stately measures of the orbicular brawl², and the

"threadle-my-needle" of the modern Roméka'. CHAP. The whole night passed in one interrupted scene of the most joyous vivacity. To us it seemed to exhibit a moving picture of other times; for in the dances we actually beheld the choirs of the Antient Greeks, as originally they were led around the altars of Delos, or amidst the rocks of Delphi, or by the waters of Helicon; or along the banks of the Eurotas². When morning dawned, we retired ; but we left them still dancing; and we heard their reiterated songs as we descended through the valley towards the shore.

Produce of Zia.

The fertility of Zia has been mentioned by antient and by modern authors, and it was particularly noticed by us upon the spot³. It appeared to be the best cultivated of any of the In our way to and from the Grecian Isles. town, we found among the rocks some very rare plants; particularly the Verbascum Græcum

of Tournefort, which here flourishes in great perfection. The cotton-plants were in flower: the island produces also abundance of wine, barley, silk, figs, and cattle. The old road from this harbour to the city of Carthæa was cut out of the solid rock, and the traces of it are still visible. There was a tradition in the time of PLINY, that Zia, or, as he writes it, Cea⁴, had been separated from Eubœa by the sea, and that a considerable part of it towards the north had been swallowed up by the waves'. This event might possibly occur at the bursting of the Thracian Bosphorus; and to this, perhaps, the antient Greek name of the island, Hydrussa⁶, may be attributed, rather than to the abundance. or excellence of its water; as the same name was common to other isles; for example, to Tenos, which may, from its relative situation to Eubæa, have had a similar origin. The mountains of Zia are all of limestone: there are no vestiges of any volcanic operation. The mineral

mentioned by Tournefort', under the appellation of "Craie de Briançon," a variety of talc, is found in great abundance near the Monastery of St. Marine, or Marinas, distant about three hours journey from the town of Zia: the inhabitants make no use of it. Lead ore is also found near the same place. From hence there are two ways of going to Athens: the first is by landing at a port near SUNIUM, which is called Dascallió; two hours from which place is a village called, from the abundance of its Karob-trees. Keratia. whence the distance is only about eight or ten hours, by land, the whole way, to Athens: the other way is by sea, up the Gulph of Engia to the PIRÆEUS. Our Consul had recommended the former way, as the easiest, the safest, and the best; but we adopted the latter, that we might have the satisfaction of making our first approach to Athens from one of its antient harbours, and of seeing as much as possible of the magnificent scenery which the gulph exhibits.

Departure for Athens. We hired a pilot from Zia, for the Saronic Gulph; and left the harbour, with a fair wind, October the twenty-seventh, soon after sun-rise.

176

⁽¹⁾ Voy. du Lev. tom. II. p. 21. Lyon, 1717.

VOYAGE TO ATHENS.

We passed Macronisi, once called HELENA, because Helen is said to have landed here after her expulsion from $Troy^{2}$; and we had such a glorious prospect of this island, and of the temple of Minerva Sunias standing upon the Cape, together with other more distant objects, that we could recollect nothing like it: such a contrast of colours; such an association of the wondersof Nature and of Art; such perfection of grand and beautiful perspective, as no expression of perceptible properties can convey to the minds of those who have not beheld the objects themselves. Being well aware of the transitory nature of impressions made upon the memory by sights of this kind, the author wrote a description of this scene while it was actually before his eyes: but how poor is the effect produced by detailing the parts of a view in a narrative, which ought to strike as a whole upon the sense! He may tell, indeed, of the dark blue sea streaked with hues of deepest purple-of embrowning shadows-of lights effulgent as the sun-of marble pillars beaming a radiant brightness upon lofty precipices whose sides are diversified by refreshing verdure and

(2) See Pausanias, lib. i. c. 35.

VOL. VI.

by hoary mosses, and by gloomy and naked rocks; or by brighter surfaces reflecting the most vivid and varied tints, orange, red, and grey: to these he may add an account of distant summits, more intensely azured than the clear and cloudless sky—of islands dimly seen through silvery mists upon the wide expanse of water shining, towards the horizon, as it were "a sea of glass:"—and when he has exhausted his vocabulary, of every colour and shape exhibited by the face of Nature or by the works of Art, although he have not deviated from the truth in any part of his description, how little and how ineffectual has been the result of his undertaking!

As we passed the southern point of *Macronisi*, and drew nearer to the promontory, the temple upon the Cape appeared to the greatest advantage in which it is possible now to view it'; for it seemed to be entire, its deficiencies being concealed by the parts which yet remain uninjured. When we had doubled the southern

⁽¹⁾ There is a very accurate representation of *Cape Sunium* and the *Temple*, engraved from a Drawing by Sir *William Gell*, in the edition of *Fulconer's Shipwreck* published by the Rev. James Stanier Clarke, LL.D. brother of the author of these Travels.

point of the Cape, we anchored in the antient port of Sunium, an insignificant bay, lying within the gulph, sheltered by the promontory. Here we landed. The owners of a small boat which we observed coasting, believing us to be pirates, ran their vessel aground, and abandoned her as soon as they perceived our caique coming round the Cape, making their escape up the rocks near We endeavoured, by signs, to to the shore. convince them of our peaceable intentions; but they betook themselves to some woods, and appeared no more while we remained in the bay. Proceeding towards the temple, we found the rocks covered with evergreens and bushy shrubs; among which we noticed the Pistacia Lentiscus, the myrtle, the Velania oak, and some dwarf cedars. We also found some rolled pieces of green trap or basalt, containing a dendritic crystallization; but had not leisure for a due examination of the strata on which this temple stands; our sailors, who had themselves been mistaken for pirates, being very impatient to get under weigh, through fear that some of the real robbers would arrive, who make the bay of Sunium their lurking-place, where they lie-in-wait for vessels going in or out of the gulph. It was with difficulty we could pacify the master of the caïque during the time we

179

PORT OF SUNIUM.

CHAP. III. Temple of Minerva Sunias.

spent in the examination of the temple. This beautiful building was once adorned with the most exquisite sculpture: its materials were of the whitest marble: it was of the Doric order: and the remains of it are sufficient to prove that, when it was entire, it exhibited one of the most highly-finished specimens of Attic architecture in all Greece. Chandler' believed it to have been "erected in the same happy period with the great Temple of Minerva, called the Parthenon, in the Acropolis at Athens, or in the time of Pericles, it having like proportions, though far inferior in magnitude." Besides the temple, there was also a Propyléum of the Doric order at Sunium. We found fifteen columns yet standing². The surfaces in some of those facing

⁽²⁾ The Sunian Temple has been recently visited by the Rev. G. C. Renouard, Chaplain to the British Factory at Smyrna. This gentleman has communicated the following notices concerning it, in a Letter to the author:

"There are now standing, on the south-east side, 9 columns.
On the north side 3
On the north-west side, 3
Total 15
"Length of the Temple from N. w. to S.E72 feet
Breadth 45
Height of columns from base to cornice - 23

the sea were much decomposed. Several persons had written their names upon the marble; and even those which had been inscribed with pencils remained, with their dates, as fresh as when they were first written. We read the names of the lamented Tweddell, and of the Hon. Captain WILLIAM PAGET. The last of these, a gallant naval officer, now buried at Gibraltar, will not want a memorial in Greece. His name will be long remembered, for the Anecdote coolness, the intrepidity, and the humanity which he displayed when commander of the Romney, a fifty-gun ship, during his memorable action with a French frigate, La Sibylle, in the harbour of Myconi. The French officer was an old acquaintance, and one with whom he had

of a Naval Officer.

The same gentleman has transmitted to the author the following beautiful Inscription, recently discovered in Samos. It relates to a woman of the name of TYRINNA, who died at the age of twenty-seven.

lived in habits of friendship. Captain Paget sent a boat to him, saying he was sorry they had met under such circumstances, but that he must desire him to surrender. He received for answer, that the Captain of La Sibylle well knew Captain Paget's force', and that he would defend himself to the last extremity. The Frenchman fired first, aided by four armed vessels, which were stationed so as to rake the Romney. Captain Paget having observed, from the situation of his ship, that some mischief would ensue to the inhabitants of Myconi, patiently sustained this powerful attack without returning a single shot, until, by getting a spring upon his cable, he had brought the Romney into a situation where the cannon might play without doing any injury to the town; then he gave his broadside, with three cheers from his crew. The Frenchman returned the salute; and a warm contest ensued, in which the Romney was ultimately victorious. The history of this action is often related in the Archipelago, although it have not been recorded in England: and as the name of the hero appears inscribed with his own hands upon the conspicuous pillars of Sunium, the STHAAI ΔΙΑΦΑΝΕΙΣ, visible from afar, may stand as lasting a

monument of his fame, as the glorious sepul-CHAP. chre which chance assigned to the memory of -TWEDDELL, when it caused him to be buried in the Temple of Theseus.

Chandler says that the Temple of Minerva Sunias was within the wall of the old town?. We saw no remains of this town; but we were induced to believe, from the appearance of some ruins upon an opposite hill, on the northern side of the port, that these were the remains of Sunium. The impatience of our mariners prevented our visiting those ruins, although they have been hitherto undescribed. They seemed to be too near to have belonged to Laurium. Among the remains of the temple we found the point of an antient lance; and many fragments of terra-cotta vessels, those indestructible and infallible testimonies of places resorted to by the Antient Greeks. As soon as we had descended to the caïque, our Captain weighed anchor, and set sail for the PIRÆEUS, now called Porto Lione, distant fortytwo miles from the Cape; but we had no sooner entered the channel, between the Island .

III.

ISLAND OF PATROCLEIA.

CHAP.

III.

PATROCLEÏA and the coast of Attica, than we - were becalmed. This island, is now called by at least half a dozen different modern' names; it is therefore best to adhere as much as possible to original appellations, for these will be found frequently preserved by the inhabitants of the country. All the barbarous nick-names given to places and islands in Greece, and introduced into modern geography, have been principally owing to the Italians. Thus Athens received the strange appellation of Settines, although it never lost its old name among its resident citizens, nor ever fell into the state of desolation and desertion which has been falsely ascribed to it. The little Island of Patrocleïa still preserved its name in Wheler's time'; but it has been called Gaitharonesi (Asses' Isle); the Island of Ebony, Guidronisa, Garderonis, &c.; and owing to all these names, it has been sometimes multiplied; and laid down in charts as a cluster of small isles, rather than as one island. Some geographers have believed this island to be the Belbina of Strabo², from the manner in which he

(1) Wheler writes it PATROCLEA; but Spon, PATROCLEIA. See Wheler's Journ. into Greece, Book vi. p. 449. Lond. 1682. Spon, Voyage de Grèce, tom. 11. p. 155. à la Haye, 1724.

(2) See Delisle's "Græciæ Antiquæ Tabula Nova," as published at Paris, 1745.

ISLAND OF PATROCLEIA.

has connected the Béllina $\tilde{vn}\sigma\sigma\sigma$ with the rampart constructed by *Patroclus*³; but in a former part of his work he is more explicit as to the situation of *Belbina*⁴, describing its situation as farther from the coast, and which some have believed to be the island now called *St. George d'Arbori*, as it is named in a chart by *D'Anville*⁴.

1 . 1 1 1 . .

The pilot whom we had brought from Zia informed us that ebony still grows upon *Patrocleia*; and we availed ourselves of the delay caused by our being becalmed, to land in search of it. We collected many rare plants upon this otherwise barren spot; but could not find a single specimen of the *Ebenus*, either *Cretica* or *pinnata*. Our sailors also landed; and they caught abundance of *echini*, upon which

(3) Πρόπισπι δι και σούτων των τόπων Βίλβινα νησος, ου πολύ απωθιν, και δ Πατρόπλου χάραζ. Strabon. Geog. lib. ix. p. 578. Oxon. 1807.

(4) Νησίδια δι περίπεισαι πολλά μιν πρός τη ππείρο. Βίλβινα δι πρός τό πίλαγος άνατείνουσα. Ibid. lib. viii. p. 544. Οχοπ. 1807.

(5) See D'Anville's Chart of the Archipelago, published at Paris in 1756. The Editor of the Oxford Edition of Strabo believed Lavousa to be the modern name of Belbina. "Belbina nunc Lavousa dicitur." (Vid. Not. in Strabon. Geog. p. 544. Oxon. 1807.) This is the island mentioned by Spon, to whose work the Reader may be referred for the best, indeed the only accurate, account of the islands in the Saronic Gulph. "Entre Ægina et Coulouri, il y a une petite isle appellée Laousa." Voyage de Grèce, fait aux Années 1675 et 1676, par Jacob Spon, tom. 11. p. 156. à la Haye, 1724. 185

ISLAND OF CALAUREA.

Islands in the Saronic Gulph.

Calaurea.

they fed heartily, both on this and the following day. The name of this prickly shell-fish, if written abbreviated as they pronounced it, would be ayin, instead of iring. The thermometer, this day at noon, indicated 80° of Fahrenheit. We were unable to leave our station off Patrocleia before the next day; and being afraid to venture upon the coast of Attica, we continued upon the island, collecting plants, until the evening, and admiring the glorious prospect exhibited on all sides. In this gulph, between the two promontories of Sunium and Scyllæum, there are not less than twenty islands'; but only three of them are inhabited, CALAUREA, ÆGINA, and SALAMIS. At present, we shall only speak of the first of these, CALAUREA, because the others will occur in the order of our route. Its situation, with regard to the Scyllæan promontory, is the same as PATROCLEÏA with respect to the Sunian. CALAUREA, rarely visited, and almost unknown, is the island to which Demosthenes fled, when he sought to avoid the fury of Antipater; and where he swallowed poison, in the Temple of Neptune: and although it have been disputed, whether the island, sometimes called Poros from

(1) See Spon, tom. H. p. 155. à la Haye, 1724.

ISLAND OF CALAUREA:

a small adjoining peninsula; be the same with the antient Calaurea, an inscription discovered there by Chandler² has put an end to all doubt upon the subject. He found, among the ruins of the city and of the temple, an inscription, upon a pedestal, containing an acknowledgment of the services of King Eumenes " TO THE GOD, AND TO THE CALAUREANS, AND TO THE OTHER GREEKS." The monument of Demosthenes remained within the precincts of the temple in the second century'. This island is eighteen miles in circumference: it is now inhabited by those descendants of the antient Macedonians who are called Arnaouts, or Albanians. Albanians; a people of whom we shall have frequent occasion to speak during our travels in Greece, and who have been much calumniated, and called a lawless set of banditti, and as being, with regard to terra firma, what the Mainotes, or Lacedæmonians, are upon the waves⁴. We are

not so well acquainted with the latter; but have reason to believe that they also have been injuriously treated in the accounts published of them from the hear-say statements of the Turks and Greeks. With regard to the Albanians, it was often our good fortune, in our subsequent journeys, to prefer a night's lodging in their cottages to the less cleanly accommodation of more stately dwellings: and this brief allusion to them has been now made, rather by anticipation, that the Reader, finding hereafter an account of them very different from the notions generally entertained of this people, may not be induced. to attribute to first impressions a description of their manners which has been the result of repeated experience.

The next morning, we hoisted sail as the sun was rising in great splendour above the mountains; but the wind blew in gusts, and we made little progress. At one time, it came with such sudden violence down the side of a high

Ils sont naturellement braves, déterminez, et infatigables, grands voleurs, et justement dans la terre ferme de Grèce ce que les Magnottes sont sur mer." Voyage d'Athènes, &c. par le S. de la Guilletiere, p. 88. à Paris, 1675.

188

VOYAGE TO ATHENS.

mountain upon the Attic coast, that it had nearly upset the caïque. These transitory gales are common in all gulphs surrounded by high land, and they render the navigation precarious for small vessels. The mountain to the east of us was called, by our sailors, Elimbo, which is Elimbo. a modern name for Olympus; and the latter appellation, perhaps, formerly denoted any very lofty eminence, as it was common to many celebrated mountains; to one in Pieria, the seat of the Gods; to another in Bithynia; to a third in Mysia; a fourth in Cyprus; a fifth in Crete; a sixth in Elis; and a seventh in Arcadia. In the course of this day we found that we were accompanied by a few small vessels, sailing up the gulph, with red sails. At four o'clock in the afternoon, being off Cape Vari, and upon the look-out towards the N.N.E. we beheld, with great transports of joy, the first sight of ATHENS; First Sight of Athens; its lofty edifices catching the sun's rays, and rendering the buildings in the Acropolis visible to us at the distance of fifteen miles. The reflected light gave them a white appearance. The PARTHENON appeared, first, above a long chain of hills in the front: presently, we saw the top of MOUNT ANCHESMUS, to the left of the temple; the whole being backed by a lofty mountainous ridge, which we supposed to be

CHAP. 111.

CHAP. III.

Zoster Promontory.

PARNES. All the fore part of this fine scene was occupied by Cape Vari and the Gulph'. Vari, or Vary, is mentioned by Chandler; but in such an uncertain manner, that it is impossible, from his description, to make out its antient name⁴. It may have been so called from the Island Phaura, which was situate before one of the Capes between Phalerum and Sunium; and there is a small island off Cape Vari. According to Chandler, Vari is only four hours' journey from Athens by land, which nearly agrees with the distance mentioned to us by our pilot. The famous Grotto of the Nymphs is only three quarters of an hour distant from Vari, inland; it is situate in a part of Mount Hymettus, which here, stretching out into the sea, forms the promontory once called Zoster; and this may be the same now called Cape Vari. In this manner, then, we may perhaps settle the geography of this part of the coast; the promontory being Zoster, and the island Phaura. ZOSTER was so called because it was said Latona had loosed her zone there, in her way to Delos, whither she

(1) The author made a sketch of it at the time, which has been engraved for this Work: it has nothing to recommend it, but the fidelity of its outline, to which he paid all possible attention.—See the *Vignette* to this Chapter.

190

was conducted by Minerva. On the shore was an altar. A strange notion seems to have been founded upon a passage in Pausanias; namely, Story of that a part of the colossal statue of Minerva in Minerva's Statue. the Acropolis of Athens was visible from the Sunian Promontory. After the repeated proofs which have occurred of late years, confirming the truth of antient geographers and historians upon many points before doubted, one would not hastily conclude that a thing positively asserted is untrue, because it has not remained to undergo the test of our experience. The distance is forty-two miles, and we barely discerned the Parthenon at fifteen; but the representation of this statue, as it appears upon an antient medal of Athens', proves that it was much higher than the Parthenon; and there is no saying what the effect might be, of light reflected from a statue of polished or gilded brass in such an atmosphere, even at the extraordinary distance from which the point of the spear and crest of the helmet are said to have been visible. This gulph has never been accurately surveyed; and the relative situation of the different parts of it appeared to us to be

(3) See "Voyage du Jeune Anacharsis." Tab. XXVII. Fig. 1. Paris, 1790.

191

Doubtful

erroneously marked in our best maps. But CHAP. Pausanias does not say the statue was visible from Sunium : his words are, "to those sailing from Sunium :" the situation, and distance, of the spectator are therefore very indefinitely, marked '.

> Towards evening we were again becalmed, and anchored near to a Cape which is opposite to a point of the Island of SALAMIS. Here we sent the pilot on shore whom we had brought from Zia, as he was the only person acquainted with the country, directing him to go to Athens and hire horses to meet us at the Piræeus on the following day. Soon after midnight, a breeze sprung up; and our impatience getting the better of all apprehension, we resolved to steer for the Piræeus, without any other pilot than the stars, which shone with great brightness. We knew that our course was due north: and therefore pointing out the polar star to the master of the caïque, we persuaded him to get under weigh, promising to pilot his vessel into harbour as safely as we had done before into

> . (1) Τῆς Αθηνᾶς ή τοῦ δόρατος αἰχμή καὶ ὁ λόφος τοῦ κράνους, ἀπὸ Σουνίου προσπλίουσίν έστιν ήδη σύνοπτα. Pausaniæ Attica, c. 28. p. 67. Lips. 1696.

VOYAGE TO ATHENS.

the port of Zia². There was barely wind enough CHAP. to keep the vessel steady to her helm; therefore if she chanced to fall upon a rock or a shoal, it would be easy to get her off again, and the pilot had said that the course was clear. Accordingly, we set sail, and for once ventured towards a lee-shore, without seeing any thing of the land. In this manner passing the mouth of the old haven PHALERUM, as we drew near to the Munychian Isthmus, we distinctly perceived the coast, like a long dark wall, before us. Upon this, we stood somewhat farther out, towards the north-west; and doubling the point, lowered our sails, and took to the oars, steering northeast, and afterwards due east; by which means we soon entered the outer port of the PIRÆEUS; Arrival at but endeavouring to pass farther in, we drove the vessel upon the ruined pier, on the Munychian side. Daylight was beginning to dawn; and a part of this pier rose above the water, so that we were enabled to land upon it, and lighten the caïque, while our sailors were employed in getting her head off the pier. We found the entrance to the inner harbour to be close to this

the Piræeus.

(2) The variation of the compass 12°.55', as observed in 1751, makes the course exactly north by the magnetic needle. See Stuart's Athens ; Map of Attica ; vol. 111.

VOL. VI.

CHAP. III. part of the antient rampart; but it was eight o'clock A.M. October the twenty-ninth, before we brought the vessel to an anchor off the customhouse, in a good sandy bottom, and about four fathoms water. Seven or eight fathoms may be found nearer to the mouth, and eleven between the two piers; the bottom shelving into fifteen and twenty fathoms in the outer port, with good anchorage¹.

Approach to Athens. At ten o'clock, we landed; and having mounted our horses, took the antient road to the city, by the indistinct remains of the walls of Conon², the Sepulchre of Menander, and the Cenotaph of Euripides. It were useless to relate the feelings with which we viewed the grandest and most affecting sight that hath been left for modern times. The Classical Reader, already convinced that nothing exists upon earth to equal

(1) As an extraordinary event in the history of the Piræeus, it may be mentioned, that the author's brother, Captain Clarke of the Royal Navy, brought an English frigate, the Braakel, to an anchor within this port; but not without considerable damage to the ship. The Athenians flocked in crowds to witness this extraordinary spectacle. See a narrative of the event, in the Notes to an edition of Falconer's Shipwreek, by the Rev. J. S. Clarke, LL.D. the Biographer of Nelson, §c. §c.

THIS road, from the *Piræeus* to *Athens*, extending for about five miles, formerly passed over marshy ground; for the foundations of the two *long walls*, which inclosed the *Piræeus* within the precincts of *Athens*, were, according to *Plutarch*, laid in a marshy soil, prepared for the purpose by being filled with huge pieces of rock¹. An inference may be deduced from this circumstance, which does not seem to have been noticed; that the plains of *Greece* having evidently resulted from the retiring of waters gradually carried off by evaporation and by

(1) Λίγιται δι και των μακοών τειχών & σχίλη καλοῦσι, συντελιστήγαι μιν υστερου την οίκοδομίαυ, την δι πρώτην θεμελίωσεν, είς τόπους ελώδεις και διαβρόχους των ξογων εμπισόντων εξεισθήναι δια Κίμωνος ασφαλώς, χάλικι πολλή και λίθοις βαρίσι των ελών πεισθεντων, εκείνου χρήματα πορίζοντος και διδόντος. IV. Origin of the Fabulous Contest between Neptune and Minerva.

CHAP.

other causes, the lakes and marshes which remained in antient times were so many relics of the retreating flood. Hence, perhaps, the origin of the antiquated and popular fable, among the earliest settlers in Attica, of the contest between Neptune and Minerva for the country, rather than that which Plutarch has assigned; who believed it to have been founded on the endeavours of the kings to withdraw the people from a sea-faring life to the labours of agriculture'. After this contest is said to have happened, Neptune is described as endeavouring to regain the territory by subsequent inundations. Some of the lakes noticed by historians are now become marshes, and the marshes they mention are become dry land. There is now little appearance of marshy land between the Piræeus and Athens^{*}: the road lies through vineyards, olive-grounds, and plantations of figtrees. Several plants were in flower; and the specimens we collected were fresher than those we gathered in the islands. In one of the vineyards, we saw a Tumulus, which is undoubt-

(2) We did not observe any thing of this nature in the road from the *Piræeus*; but in the map of *Attica*, as surveyed by *Stuart*, there is notice of a marshy soil bordering the *Phulerum*, now called *Porto Phanari*. See *Stuart's Athens*, vol. 111. Lond. 1794.

198

edly an antient sepulchre. The monument of CHAP. Euripides was a Cenotaph, but that of Menander did really contain his ashes. The tomb of Euripides was at Pella, in Macedonia; possibly. therefore, this mound may have been the sepulchre of the Comic Poet. Pausanias, speaking of the Cenotaph of Euripides, calls it Mun µas. This is evidently Tagos, but it has upon its summit the remains of some structure, not as for the support of a Stélé, but of a Munucion raised upon the mound; which would rather confirm Chandler's opinion, who believed it to be the monument raised to Euripides⁴. It had not been opened at the time of our arrival: The business of making excavations among the Excava-Grecian tombs was then beginning in the neigh- Athens. bourhood of Athens, and it has since abundantly rewarded the taste of those travellers under whose patronage such labours have been carried on'. We observed the remains of the

(5) A French artist, Mons. Fauvel, is said to have met with great success in these researches. Don Battista Lusieri opened several tombs, and thus made a collection of the most valuable Grecian vases. Among English travellers, the EARL OF ABERDEEN is particularly distinguished for his liberality in encouraging works of this kind: the more laudable, in being opposed to the lamentable operations which another British Earl, one of his Lordship's countrymen, was then prosecuting, to the UTTER RUIN of the finest works of Antient Greece. 199

> Greece. To the Earl of Aberdeen, History and the Fine Arts will ever be indebted, for the pains he bestowed in the excavation and restoration of the Pnyx, and for other similar undertakings. (See Appendix to the Cambridge Marbles, p. 67. Camb. 1809.) Many of our countrymen have since followed Lord Aberdeen's example.

> Upon the subject of the excavations at *Athens*, Mr. *Walpole* has the following observations in his Journal :

" Travellers, who will be at the pains to excavate the soil in the vicinity of Athens, will be amply rewarded for their trouble. The vases which Signor Lusieri has found in digging near the city are, in their form and general execution, not to be surpassed by any that have been discovered in Italy and Sicily. Among other remains of antiquity, he has found musical instruments (the airlos and mrayiavros, called, by the Modern Greeks, παγιαύλιον), ornaments of dress of various kinds, ear-rings of gold, and mirrors. These last are of metal: in Pliny (lib. 34.) we find mention of the employment of tin and silver in the fabrication of them : the Jews and Egyptians used those made of brass. In the time of Pompey there were some of silver. The form of the antient mirror is observed frequently on vases in this shape Φ , being the character of one of the plauets and a metal; namely, Venus, and copper: the meaning of it, thus applied, is evident, as mirrors were sacred to Venus, and were made of a metal from Cyprus; that is, copper; and were covered with a leaf of silver. In the analysis of a mirror, Caylus discovered a mixture of copper," regulus of antimony, and lead: copper was the preponderating; lead, the least part.

"In the Ceramicus, near to the site of the Academy, was discovered that very antient and interesting Inseription in verse (now in England), of which Mous. Fauvel gave me a copy at Athens, relating to those Athenians who had fallen at Potidæa, in the Peloponnesian war: the first line, legible, begins, AI@EPMEM\$TXA\$THE\$AEX\$ATO... The form of the letters, and other archaisms, render the inscription very valuable. Near the Church of Soteira Lycodemon, probably the site of the antient Lyceum, was found an Inscription, copied also by Mons.

walls, we beheld the vast CECROPIAN CITADEL, crowned with temples which have originated in the veneration once paid to the memory of the Cecropian illustrious dead', surrounded by objects telling the same theme of sepulchral grandeur, and now monuments of departed greatness, mouldering in all the solemnity of ruin. So para- Furereal mount is this funereal character in the approach the City. to Athens from the Piræeus, that as we passed the hill of the Muséum, which was, in fact, an antient commetery of the Athenians, we might have imagined ourselves to be among the tombs of Telmessus, from the number of the sepulchres hewn in the rock, and from the antiquity of the

CHAP. IV.

Citadel.

Aspect of

Mons. Fauvel, mentioning Dionysius, Auxilou inquithrns. The removal of the earth from part of the Pnyx has given us a more exact notion of the form of that celebrated place of assembly. A number of votive offerings were found at the time of the excavation by Lord Aberdeen ; but to what Deity or what temple they belonged, it is difficult to say. On one of them, having an eye sculptured on the stone, were the words Euclos byliere ingne: on another I saw, Durpopos byliere At Walpole's MS. Journal. xapistipion."

(I) The first place of worship in the Acropolis of Athens was the Sepulchre of Cecrops. The Parthenon was erected upon the spot. (See the Observations in Vol. 11. of these Travels, Chap. 11. p. 76. Octavo edition.) The Athenians preserved his tomb in the Acropolis, and that of Ericthonius in the Temple of MINERVA POLIAS. (Vid. Antioch. apud Clemen. Alexand. tom. I. p. 39. O.con. 1715.) Hence Clemens is of opinion that tombs were the origin of all their temples : Νεώς μεν ευφήμως ονομαζομένους, πάφους δε γενομένους, πούπεστε πούς ráques vins inizian púvous. Clementis Alexandrini Cohortatio ad Gentes, c. 3. tom. I. p. 39. Oxon. 1715.

workmanship, evidently not of later date than CHAP. any thing of the kind in Asia Minor. In other respects, the city exhibits nearly the appearance briefly described by Strabo eighteen centuries before our coming¹; and, perhaps, it wears a more magnificent aspect, owing to the splendid remains of Hadrian's Temple of Olympian Jove, which did not exist when Athens was visited by the disciple of Xenarchus. The prodigious columns belonging to this temple appeared full in view between the Citadel and the bed of the Ilissus²: high upon our left rose the Acropolis, in the most impressive grandeur': an advanced part of the rock, upon the western side of it, is the Hill of the Areopagus, where St. Paul preached to the Athenians, and where their most solemn tribunal was held⁴. Beyond

VI.

all, appeared the beautiful Plain of ATHENS, bounded by Mount Hymettus. We rode towards the craggy rock of the Citadel, passing some tiers of circular arches at the foot of it; these State of are the remains of the Odéum of Herodes Atticus⁵, built in memory of his wife Regilla. Thence continuing to skirt the base of the Acropolis, the road winding rather towards the north, we saw also upon our left, scooped in the solid rock, the circular sweep on which the Athenians were wont to assemble to hear the plays of Æschylus, and where the Theatre of Bacchus was afterwards constructed. The Torso of a statue of the INDIAN BACCHUS, placed, in a sitting attitude, upon the Choragic Monument of THRASYLLUS above this theatre, exhibited to us the first specimen of Athenian sculpture which we had seen upon the spot; and with the additional satisfaction of viewing it in the situation where it was originally placed⁶. Stuart considered

(5) See the Plate above referred to.

(6) This statue was long believed to be that of a female. Stuart represented it with a female head. (See Stuart's Antiq. of Athens, vol. II. ch. iv. Pl. 6. Lond. 1787.) Chandler considered it as the statue of Niobe. (Trav. in Greece, p. 64. Oxf. 1776.) It really represented the Indian, or bearded, Bacchus; part of the beard having been discovered upon the statue. It is moreover decorated with the spoils of a panther. Alas ! not only this Statue, but also the antient Sun-dial 203

the Antiquities.

CHAP. IV.

Relic.

the theatre as the Odéum of Pericles1; and it is remarkable that Pausanias mentions a statue of Bacchus, as worthy of notice, in a conspicuous situation upon entering the Odéum². Upon the Interesting eastern side of this statue, fastened in the rock, appeared a still more interesting relic; namely, the very antient SUN-DIAL which, in the time of Æschylus, of Sophocles, and Euripides, indicated to the Athenian people the hour at which their plays were to begin. This we had reason to hope would be permitted to remain where it had been so long preserved; as no antient nor modern Alaric had deemed it to be an object worthy of his regard. Above the statue we saw also the two CHORAGIC PILLARS for supporting TRIPODS, described by Chandler³ and by Stuart⁴, standing high upon the steep acclivity of the rock⁵. Fortunately for us, we

> Sun-dial near to it, which had existed there ever since the time of Æschylus, Sophocles, and Euripides-antiquities which were only valuable as long as they remained in their original situation-have been since pulled down, and carried off, in the name of the British Nation, by the agents of our Ambassador at the Porte !!!

arrived before the spoliation of this part of the antient city; and we therefore saw all these interesting objects, as they existed in the time of *Pericles*.

We then entered the gate of the modern city: and almost the first object we beheld was the only remaining structure of all the consecrated fabrics that once adorned the famous Street of the Tripods, the elegant CHORAGIC MONUMENT OF LYSICRATES⁶. In the small *Capuchin* Convent annexed to this building, our friend and former companion in the PLAIN OF TROY, *Don Battista Lusieri*⁷, had fixed his residence.

(6) See Stuart's Antiq. of Athens, vol. I. ch. iv. Plate 3. Lond. 1762. (7) This celebrated artist, better known by the name of Don Tita, is a native of Naples : he resided many years in Italy, where he was renowned for his beautiful drawings in water-colours. Many of his best works are in the Collections of our English Nobility. By some, his compositions have been deemed too laboured; but his colouring is exquisite, and nothing can exceed the fidelity and perfection of his outline and perspective. It may he said of Lusieri, as of Claude Jorrain, " If he be not the Poet, he is the Historian of Nature." When the French invaded Naples, he retired to Sicily, and was long employed among the Ruins of Agrigentum, devoted entirely to his favourite pursuit. The desire of seeing Greece, tempted him to follow the British Embassy to Constantinople, in 1799: whence he removed to Athens; where he now lives, surrounded by every thing that may exercise his genius; and where he is not less distinguished by his amiable disposition, and disinterested attention to travellers who visit the city, than by his taste, and knowledge of every thing connected with the history of the Fine Arts.

A monk told us that he was then busy in the Acropolis, making drawings in the ERECTHÉUM; therefore leaving our horses and baggage, we set out instantly in pursuit of him, anticipating the gratification we should receive, not only in surprising him by our appearance where he had not the smallest expectation of seeing us, but also in viewing the noblest monuments of antiquity with a *Cicerone* so well qualified to point out their beauties.

Remarks upon entering Athens.

As we are now about to ascend the Acro-POLIS, and of course to enter upon a description of antiquities which are well known, it is necessary to premise that our observations will be brief. To give a detailed account of every thing which has been hitherto deemed worthy of notice in such a city as Athens, would be as much a work of supererogation as to republish all the inscriptions which have been found in the place, and to renew the detail of every circumstance so often related concerning its antient history. The author's remarks will be confined to such observations as, to the best of his knowledge, have not been made by former travellers; but, perhaps, even in such a communication, it will not be always possible to avoid repeating what others may have said.

A mistaken opinion prevailed until towards the end of the seventeenth century¹, that the remains of Athens had been almost rased from the earth, and that even its name no longer existed. The few merchants who resorted to the Piræeus, from Italy and from other parts of the Mediterranean, had given to it the barbarous appellation of Setines, or Sethina²: although, "of all the antient cities in Greece," as an early traveller remarked who will presently be more particularly noticed, "no one has preserved its name with better success than Athens has done; for both Greeks and Turks call it AOHNH." This is another instance of the corruptions introduced

(1) Chandler says, "until the middle of the sixteenth century;". but the public curiosity does not appear to have been directed to this city until long after the publication of the work to which he alludes.

(2) Sethina, and Satina, are corruptions, according to Portus and Meursius, from is Admiz. Various conjectures have arisen touching the origin of the antient name. Heinsius (in Aristar. Sac. Synt. I. 1: p. 27.) derives it from the Chaldwan NJITHENA, signifying to study or learn, written with an article, HATTHENA. In the time of Diodorus Siculus, and before him, it was a received opinion that Athens was peopled by the EGYPTIANS : Saïs, in the Egyptian language, answering to Athenæ in Greek. The word Sethina is found in the Latin Poem of Hugo Favolius (in Hodæp. Byz. l. iii.) who himself visited the spot.

" Undique sic miseræ nobis spectantur Athenæ,

Dædala quas Pallas sese coluisse negaret, Quas, Neptune pater, nunquam tua mænia dicas, Indigenæ Sethina vocant."----- 207

CHAP. IV.

into the modern nomenclature of places in Greece, by Italians and by Frenchmen: and it ought to be the constant endeavour of authors. by whom the country is described, to prevent this abuse, by adopting the antient names in their writings, where it can be done with propriety, and certainly in all cases where they have been preserved by the inhabitants. It has been supposed that the first intelligence of the better fate of Athens was communicated to the world by the valuable publications of Sir George Wheler and Jacob Spon: but seven years before Wheler and his companion arrived in Athens, it had been visited by the traveller above mentioned; who anticipated almost every thing which they have said upon this subject; and the narrative of whose Travels, although little known, and rarely noticed by any subsequent author, contains the most racy description of the city and of its inhabitants, of its antiquities and statistics, which had appeared before the time of its publication. This traveller was De Guilletiere. la Guilletiere, or, as he sometimes signed himself, Guillet, answering to a name common in England, WILLET. After four years of slavery in Barbary, he arrived in Athens, in company with two Italians, two Germans, and an Englishman of the name of Drelingston, the first of our

208

countrymen who voluntarily undertook this CHAP. voyage for the mere gratification of classical taste and literary curiosity. The original edition of Guilletiere's work appeared in Paris in January 1675. In the beginning of June in the same year, Wheler "hastened to Venice," (it is his own expression¹,) after his travels in France and Italy, in search of Dr. Spon, to accompany him upon a similar voyage. It is therefore highly probable that the success of Guilletiere's expedition excited Wheler to this sudden undertaking: that he had seen his work is evident, for he cites it, calling its author De la Gulitier', and Guiliter'; and although he speak rather lightly of his predecessor⁴, he sometimes copies him without owning his obligation'. His

(4)." But not as Monsieur Guiliter affirmeth" . . . " My companion and I were not so much surprized, &c. as Monsieur Guiliter" those marvelous stones Monsieur Guiliter makes such a miracle of" . . . &c. Ibid.

(5) Of this, several instances may be pointed out, where the transcript is as literal as it can be from one language into another. " A l'égard du langage, il est le plus pur, et le moins corrompu de la Grèce." (Guillet, p. 155. Paris, 1675.) " The Athenians seem to retain more of the antient Greek in their language than the rest of the Modern Greeks do." (Wheler's Journey into Greece, p. 355. Lond. 1682.) And, after all, this is not true; for the purest Greek is not spoken in Athens.

VOL. VI.

The

1V.:

companion, Spon, had done the same; but, with all his learning, he has not produced either so entertaining a work as that of *Guilletiere*, or, divested of its *inscriptions*, one that contains more of information. We may therefore, perhaps, look to *Guilletiere* as to the person who first drew the attention of *English* travellers towards the Ruins of *Athens*; for although the Letters, giving a description of the city, which were published by *Martin Crusius*, appeared nearly a hundred years before, yet those Letters

The greatest proof, perhaps, of plagiarism that can be adduced, is one of this nature ; shewing, that even the errors of an author have been transcribed. If either Wheler or his companion had given themselves the trouble to consult the authors cited by Meursius, they would have found the very opposite of this assertion expressly stated; that, of above seventy dialects now remaining in Modern Greece, the Athenian, instead of being the purest, is the most corrupted, and the worst. Περί δε των διαλέκτων, τι ών και είποιμι, πολλών ούσων, και διαφόρων, ύπερ των έβδομήμοντα; τούτων δ' άπαζων, ή των 'Αθηναίων χειρίστη. (Vid. Epist. Sim. Cabasilæ, ad Mart. Crus. script. anno 1578.) And Theodosius Zygomalas, in his Letter to the same person, says, speaking of the Greek language in Athens, 'Halion di BapBapos, istin n Tan' Almaian H Tis in ότε ὑπῆρχεν, ἀρίστη ἀν τις εἰ εἶπη καταδιάμετρον. τη πάλαι, οὐχ ῶν ἀμάρτοι. Meursii Fortuna Attica, p. 113. L. Bat. 1622. Again, Guilletiere, after the passage which the author has cited, concerning the existence of the antient name of the city, says, " Nos géographes ont beau nous le vouloir alterer en l'appellant Setines." Wheler transcribes the whole; and also adds, " I wonder our modern geographers have been no better informed concerning so eminent a place, calling it most corruptly, in their maps, Setines" . . . &c. There are many other examples of a similar nature, in the volumes both of Wheler and Spon.

have attracted more notice in this country since, than before, Wheler's time; and they always tended rather to maintain than to confute the erroneous notion, which was so long prevalent, concerning the condition of. the city'. Guilletiere's diminutive publication is nevertheless so comprehensive, that, abating a few partial inaccuracies, the consequences of pursuing an untrodden path, his book is, even at the present day, a useful guide to the antiquities of Athens; and his plan of the city, rude as it may appear among the works of later artists, is so much better than that which Wheler afterwards edited, that it is strange the latter did not adopt it in his work.

As we ascended the steep rock on which the Ascent of Citadel stands, our first subject of wonder was polis. the power displayed by the Antients in conveying up such an acclivity the enormous masses of marble necessary in the construction of so many sumptuous edifices; when all the skill and ingenuity of the best workmen in

the Acro-

CHAP: IV.

⁽¹⁾ One of those Letters is from a native of Nauplia : it was written in 1575. Its author says, "'Allà TI Tur 'Abnow unobeis, wareologie; Siena Aufficas roo razas rori Coov. Sed quid multa de Athenis dico? Superest hodie tantum pellis : animal ipsum olim periit." Vid. Epist. Fam. Turcogracia, lib. vii. p. 430. Basil. 1583.

CHAP. Europe were requisite, at the time of our arrival, IV. to remove some of the most delicate ornaments of the temples, in an entire state, from the Acropolis to the lower city. None of the materials of those temples are of the same nature as the rock upon which they were erected: the quarries of Pentelicus, of Hymettus, of the Cyclades, of Lacedæmon, and of the most distant mountains of Greece, contributed to the works necessary for their completion. All the huge blocks of marble required for the several parts of each building must have been moved up the same steep; for there is now, as there was formerly, but one way facing the Piræeus by which the summit may be approached¹. In our ascent, we found an inscription on white marble, stating that "the Senate of the Areopagus, and of the Six Hundred, &c. honour Julius," &c. the rest being wanted. We could only make out the following characters:

Η ΕΞΑΡΕΙΟΥΠΑΓΟΥΒΟΥ ΛΗΤΩΝΕΞΑΚΟΣΙΩΝΚΑΙ ΙΟΥΛΙΟΝΝΙΚΑΝΟΡΑ..

(1) 'Ες δί την άχεόπολιν, ϊστιν ιασδος μία, (ἰτίραν δι οὐ παρίχιται, πάσα άπότομος οδοα) και τιιχος ίχουσα ἰχυρόν. Pausaniæ Attica, c. 22. p. 51. Lips. 1696. Soon afterwards, somewhat higher up, we also CHAP. saw, among some loose stones used as the materials of a wall near to the gate of the Citadel, a piece of sculpture of white marble in very bold relief, representing the torso of a male figure. This proved to be nothing less than a fragment of one of the metopes belonging to the PARTHENON; and therefore, as the undoubted work of Phidias, Relic of Phidian although but a fragment, could not fail to be Sculpture. regarded by us as a valuable relic, and a very great curiosity. It was not to be easily procured; neglected and abandoned as we found it lying; owing to the embargo then laid upon every thing of this kind by our Ambassador, and the absolute prohibition against moving any. thing, excepting into his store-house. The Disdar, however, afterwards claimed it as his property, and presented it to us; and it is now in the Vestibule of the University Library at Cambridge, a solitary example of sculpture removed from the ruins of the Parthenon without injuring what time and the Goths have spared. Upon the left hand we saw, in the face of the rock, the small cavern which perhaps may be Advtum considered as the Grotto of Pan; for this, by its of Pan. relative position to other objects, seems to be the identical cavity which is represented in the

IV.

CHAP. view of the Acropolis preserved upon an antient IV. medal of Athens in the Collection at Paris¹. It

medal of Athens in the Collection at Paris'. It is below the right wing of the Propylaa, or antient vestibules of the Citadel, in the situation which Pausanias assigns for it: and somewhat lower in the rock is the fountain mentioned also by him². In other respects, it seems ill suited to the stories which caused it to be considered as the scene of Apollo's amours with Creusa, and as a place of residence for Pan: but when the mind is completely subdued by superstition, it is seldom burdened by any scruples as to probability: the same priests who now exhibit at Jerusalem, the altar of a small chapel as the Hill of the Crucifixion³ are a modern example of the Naoquilazes who attended the Shrine of Pan, and they possess a degree of intellect as well calculated for admitting the extravagances related of the one as of the other. The Grotto, as it now appears, seems to be nothing more than one of those niches in which votive offerings

were placed; and although described as a cave CHAP. which contained a temple of Apollo, and of Pan⁴, would barely admit the size of a human figure. But this allusion in antient history to temples so diminutive that they could not have exceeded the size of a child's baby-house, may receive illustration, like many other parts of the Heathen religion, from existing superstitions. The subject has not, perhaps, been sufficiently explained; as none of the authors who have written on Grecian antiquities seem to be aware of a custom which has been transmitted from the earliest ages of Pagan worship to modern times. The 'Isea' Isea of the of the Greeks, as well as the Tabernacles of Eastern nations, were sometimes not only porta- Portable ble, but they were so small, that the zioras ispai, used for inclosing them during journeys, scarcely exceeded the size of the fashionable snuff-boxes now used by the petit-maîtres of Paris and London. Examples of this kind of portable shrine are particularly common in Russia, and in all countries professing the religion of the Greek Church: they are made either of wood or of metal, with two little folding-doors, which are thrown open when the Bogh or idol is to be

CHAP. wors

worshipped¹. Of such a nature were the shrines alluded to in Sacred History, where Demetrius is described as stirring up those who made silver shrines or tabernacles for Diana^e; that is to say, little temples, or cabinets after the manner of temples. The custom of using them has been retained among the Roman Catholics. The first converts to Christianity brought the use of portable temples with them into the Christian Church; for, according to Socrates Scholasticus, the Emperor Constantine carried with him a portable temple in his expedition against the Persians, not for the worship of any idol, but of the true God': this was a kind of tent said to resemble the tabernacle of Moses in the desert⁴. Hiera of this kind were also drawn by cattle. The Philistines sent back "the Ark of the God of Israel" in "a new cart" drawn by "two milch

(1) The pictures of Roman-Catholic churches have preserved the form of these shrines to a very late age; the doors themselves being painted, and serving, when thrown open, to exhibit a subject in three compartments. Of this form was the famous picture of the elevation or setting up of the Cross, by Rubens, over the high altar, in the Church of St. Walburga, at Antwerp. There is a very large print of this capital composition, by Witdoech, otherwise called Withone. St. Walburga was an English woman.

kine'." -The temple of Agrotes, according to Sanchoniatho, was drawn by oxen. The portable temple was also sometimes carried upon men's shoulders : and although the "bearing" or "taking up of Tabernacles" are expressions used metaphorically in Scripture for the adoration paid to them, yet they are borrowed from a practice, which was well known at the time, of carrying the Tabernacle upon the shoulders of men from one place to another. Thus the Israelites are said to have "borne," and to take up," the "Tabernacle of Moloch⁶." Such portable temples among the Antients were conveyed with them to their wars, and accompanied them upon their travels. This was the constant usage of the Arabians', Egyptians', Trojans', Carthaginians', and Germans". When settlements were made, and cities built, they were of course deposited in safe but conspicuous places; in cavities fashioned for the purpose, within the rocks on.

which their citadels stood; or in niches, by the side of their most frequented roads. Hiera, answering to this description, are found, at this day, in all countries professing the Greek and Roman-Catholic religions; before which votive gifts are placed, as in former ages: and this seems sufficient to explain the sort of temples alluded to by antient authors, as being here stationed within a niche, called the CAVE OF PAN, in the face of the rock below the Acropolis of ATHENS. Within this cave there formerly stood a statue of the goat-footed God; who, on that account, was said by Euripides', and by Lucian², to have fixed his residence at Aihens, beneath the northern or Pelasgic wall of the Acropolis: and it is rather remarkable, that in a garden below this Grotto, at the foot of the rock, there was discovered a marble statue of Pan, of a size to suit the cavity, which exactly

Statue of Pan.

corresponds with the description of the antient image in the Grotto, bearing a trophy upon its head'; for the iron cramp, by which this burden was sustained and connected with the mass of marble used for the lower part of the figure, yet remains. We saw this statue upon the spot where it was discovered; and we removed it to the University of Cambridge, where it is now placed, with the other Greek Marbles, in the Vestibule of the University Library⁴. The drapery afforded by the spoils of a goat thrown over the figure is executed in the very antient style of sculpture called Græco-Etruscan; and there is great reason to believe that this is the identical statue alluded to by Lucian, as before cited. Not far from the same place there was also found the torso of a small marble statue of Apollo, of a more diminutive size than that of Pan. but executed in a style of sculpture equal to any thing produced in the most splendid æra of the art. This we also brought to England. There is certainly

(4) An engraving of this statue, from a drawing by the celebrated *Flaxman*, was made for Mr. *Wilkins's* Antiquities of *Magna Græcia* (p. 71). For a further account of it, see "Greek Marbles," p. 9. No. XI. Camb. 1809.

CHAP. IV.

something singular in such an association so near to the Adytum, said to be tenanted by these The identity of the Grotto itself two Deities. was a theme of dispute among earlier travellers, who gave to the subject more consideration than perhaps it may seem to merit. Guilletiere is the first of the moderns by whom it is noticed. He had been with his companions to visit the small chapel called Panagia Spiliotissa, or our Lady of the Grotto, in a hollow of the rock above the Theatre of Bacchus, at the south-east angle of the Acropolis; which a Greek spy, a native of Candia, had pointed out to the Venetians as a proper place to serve as a mine in blowing up the citadel'. Guilletiere persuaded himself that the Panagia was nothing less than the actual grotto once dedicated to Apollo and Pan, which is mentioned by Euripides in two or three of his tragedies². Seven years after Guilletiere's visit, the same cavern was examined by Wheler and

(1) Voyage d'Athens par S! De la Guilletiere, p. 180. Paris, 1675.

(2) "Dès que nous fusmes sortis de *Panagia*, j'obligeay nos gens à tourner la têste pour y regarder avec plus d'attention, parce que je les fis souvenir que c'estoit là *cette Grotte* si célébre daus l'antiquité, &c. Grace à la dureté du rocher, c'est là le plus entier de tous les célébres monumens qui nous sont restez de l'ancienne Athénes. Euripide a parlé de *cet antre*, en deux ou trois endroits de ses trajédies." *Ibid. p.* 179.

by Spon; both of whom deny that it was the Grotto of Pan, as mentioned by Guilletiere; and they place the real Grotto of Pan upon the northern side of the Citadel, beneath the Pelasgic Wall, according to the testimonies of EURIPIDES and of LUCIAN³. Chandler afterwards confirmed their observations⁴: and in this state the question now rests; no one having since expressed any doubt upon the subject.

As we drew near to the present entrance of the *Citadel*; we passed before the *façade* of the **PROPYLÆA**; the old entrance to the *Acropolis* between its *Doric* pillars being walled up. The *Turhish* guard at the gate suffered us to pass, as soon as we mentioned the name of *Lusieri*; and one of them offered to conduct us to the spot where he was then at work. We found him in the midst of the ruins of the ERECTHÉUM, seated upon a heap of stones, with his drawing implements before him, equally surprised and delighted to see us once more, and in such a place. It happened that the very pencil which he was 221

CHAP. then using was one of several, made by IV. Middleton, which the author had conveyed for him from England to Naples many years before. He had only two remaining : and he considered them of so much importance to the perfection of his designs, that he would willingly have purchased more at an equal weight of gold; using them only in tracing the outline, and as sparingly as possible. The best illustration of his remark was in a sight of the outlines he had then finished. It might have been said of the time he had spent in Athens, as of APELLES, "Nulla dies sine linea :" but such was the extraordinary skill and application shewn in the designs he was then completing, that every grace and beauty of sculpture, every fair and exquisite proportion, every trace of the injuries which time had effected upon the building, every vein in the marble, were visible in the drawing; and in such perfection, that even the nature and qualities of the stone itself might be recognised in the contour¹. He would not hear

> (1) Whoever may hereafter be the possessor of these Drawings, will have in the mere *outlines* (for it is impossible this artist can ever finish the collection he has made) a representation of the antiquities and beautiful scenery of *Greece*, inferior to nothing but the actual sight of them. Hitherto no *Mæcenas* has dignified himself by any thing deserving

of our descending again from the Acropolis before the evening: but gave us a recommendation to the house of a widow, sister of the late English Consul, where he said we might be comfortably lodged; and to which he promised to conduct us, after dining with him and the Disdar or Governor of the Citadel, in the midst of the splendid remains of architecture and sculpture by, which we were surrounded. He became our guide to all the different buildings; and began by shewing us the PARTHENON. Some workmen, employed under his direction Spoliation of the for the British Ambassador, were then engaged Temples. in making preparation, by means of ropes and pulleys, for taking down the metopes, where the sculpture remained the most perfect. The Disdar himself came to view the work, but with evident marks of dissatisfaction; and Lusieri told us that it was with great difficulty he could accomplish this part of his undertaking, from the attachment the Turks entertained towards a building which they had been

deserving the title of a patron of such excellence. Many have bought his designs when he could be induced to part with them, by which means he has barely obtained subsistence; and he is too passionately attached to the sources which Athens has afforded to his genius, to abandon Greece, even for the neglect which, in his letters to the author, he complains of having there experienced.

CHAP. IV.

accustomed to regard with religious veneration, and had converted into a mosque. We confessed that we participated the Moslem feeling in this instance, and would gladly see an order enforced to preserve rather than to destroy such a glorious edifice. After a short time spent in examining the several parts of the temple, one of the workmen came to inform Don Battista that they were then going to lower one of the metopes. We saw this fine piece of sculpture raised from its station between the triglyphs: but the workmen endeavouring to give it a position adapted to the projected line of descent, a part of the adjoining masonry was loosened by the machinery; and down came the fine masses of Pentelican marble, scattering their white fragments with thundering noise among the ruins. The Disdar, seeing this, could no longer restrain his emotions; but actually took his pipe from his mouth, and, letting fall a tear, said, in a most emphatical tone of voice, "Télos !" positively declaring that nothing should induce him to consent to any further dilapidation of the building'.

(1) This man was, however, poor, and had a family to support; consequently, he was unable to withstand the temptations which a little money, accompanied by splendid promises, offered to the necessities of his situation. So far from adhering to his resolution, he was afterwards

СНАР. Looking up, we saw with regret the gap that had been made; which all the ambassadors of

afterwards gradually prevailed upon to allow all the finest pieces of sculpture belonging to the Parthenon to be taken down ; and succeeding travellers speak with concern of the injuries the building has sustained, exclusively of the loss caused by the removal of the metopes. One example of this nature may be mentioned; which, while it shews the havoc that has been carried on, will also prove the want of taste and utter barbarism of the undertaking. In one of the angles of the pediment which was over the eastern façade of the temple, there was a horse's head, supposed to be intended for the horse of Neptune issuing from the earth, when struck by his trident, during his altercation with Minerva for the possession of Attica. The head of this animal had been so judiciously placed by Phidias, that, to a spectator below, it seemed to be rising from an abyss, foaming, and struggling to burst from its confined situation, with a degree of energy suited to the greatness and dignity of its character." All the perspective of the sculpture (if such an expression be admissible), and certainly all the harmony and fitness of its proportions, and all the effect of attitude and force of composition, depended upon the work being viewed precisely at the distance in which Phidias designed that it should be seen. Its removal, therefore, from its situation, amounted to nothing less than its destruction :- take it down, and all the aim of the sculptor is instantly frustrated! Could any one believe that this was actually done? and that it was done, too, in the name of a nation vain of its distinction in the Fine Arts? Nay more, that in doing this, finding the removal of this piece of sculpture could not be effected without destroying the entire angle of the pediment, the work of destruction was allowed to proceed even to this extent also? Thus the form of the temple has sustained a greater injury than it had already experienced from the Venetian artillery; and the horse's head has been removed, to be placed where it exhibits nothing of its original effect : like the acquisition said to have been made by another Nobleman, who, being delighted at a puppet-show, bought Punch, and was chagrined to find, when he carried him home, that the figure had lost all its humour.

225

IV.

Yet

the earth, with all the sovereigns they represent, aided by every resource that wealth and talent can now bestow, will never again repair. As to our friend *Lusieri*, it is hardly necessary to exculpate him; because he could only obey the orders he had received, and this he did with manifest reluctance: neither was there a workman employed in the undertaking, among the artists sent out of *Rome* for that purpose, who did not express his concern that such havoc should be deemed necessary, after moulds and

Yet we are seriously told, (Memorandum, p.8. Lond. 1811,) that this mischief has been done with a view to "rescue these specimens of sculpture from impending ruin:" then, why not exert the same influence which was employed in removing them, to induce the Turkish Government to adopt measures for their effectual preservation! Ah no! a wiser scheme was in agitation: it was at first attempted to have them all mended by some modern artist!!! (See Memor. p. 39.) From this calamity they were rescued by the good taste of Canova. (Ibid.). The sight of them (Memor. p. 42.) "so rivetted and agitated the feelings of Mrs. Siddons, the pride of theatrical representation, as actually to draw tears from her eyes.", And who marvels at such emotion?

CHAP.

casts had been already made of all the sculpture which it was designed to remove. The author would gladly have avoided the introduction of this subject; but as he was an eye-witness of these proceedings, it constitutes a part of the duties he has to fulfil in giving the narrative of his travels; and if his work be destined to survive him, it shall not, by its taciturnity with regard to the spoliation of the Athenian temples, seem to indicate any thing like an approval of the measures which have tended so materially towards their destruction.

To a person who has seen the ruins of Rome, Comparithe first suggestion made by a sight of the build- tween the ings in the Acropolis is that of the infinite supe- and Roman riority of the Athenian architecture. It possesses the greatness and majesty of the Egyptian, or of the antient Etruscan style, with all the elegant proportions, the rich ornaments, and the discriminating taste of the most splendid æra of the Arts. "Accustomed as we were," said Stuart¹, in speaking of the Parthenon, "to the antient and modern magnificence of Rome, and, by what we had heard and read, impressed

with an advantageous opinion of what we were come to see, we found the image our fancy had preconceived greatly inferior to the real object." Yet Wheler, who upon such a subject cannot be considered as of equal authority with Stuart, says of the monuments of antiquity yet remaining in Athens', "I dare prefer them before any place in the world, Rome only excepted." If there be existing upon the earth any buildings which may fairly be brought into a comparison with the Parthenon, they are the temples of Pæstum in Lucania; but even these can only be so with reference to their superior antiquity, to their severe simplicity, and to the perfection of design visible in their structure : in graceful proportion, in magnificence, in costliness of materials, in splendid decoration, and in every thing that may denote the highest degree of improvement to which the Doric style of architecture ever attained, they are vastly inferior. This is at least the author's opinion. Lusieri, however, entertained different sentiments; and his authority upon such a subject is much more worthy of the reader's attention. Lusieri had resided at Pæstum; and had

(1) Journey into Greece, Book V. p. 357. Lond. 1682.

dedicated to those buildings a degree of study CHAP: which, added to his knowledge of the arts, well qualified him to decide upon a question as to the relative merits of the Athenian and Posidonian Athenian, Posidospecimens of Grecian architecture. His opinion *Posido-nian*, and is very remarkable : he considered the temples Architecof Pæstum as examples of a purer style; or, as he ture. termed it, of a more correct and classical taste. "In those buildings," said he, "the Doric order attained a pre-eminence beyond which it never passed; not a stone has been there placed without some evident and important design; every part of the structure bespeaks its own essential utility." He held the same opinion with regard to the Temple of the Panhellenian Jupiter in the Island of Ægina. "Of such a nature," he added, "were works in architecture, when the whole aim of the architect was to unite grandeur with utility; the former being founded on the latter. All then was truth, strength, and sublimity." According to his opinion, a different character is applicable to the Parthenon. In this building, the Doric, having attained its due proportions, was supposed to be displayed with every perfection which the arts of Greece could accomplish; 'but' this has not been the case. In all that relates to

229

-

CHAP. IV.

harmony, elegance, execution, beauty, proportion, the Parthenon stands a chef-d'œuvre ; every portion of the sculpture by which it is so highly decorated has all the delicacy of a caméo: but still there are faults in the building, and proofs of negligence, which are not found in the temples of Pæstum; and these Lusieri considered as striking evidences of the state of public morals in the gay days of Pericles; for he said it was evident that he had been cheated by his workmen. He pointed those defects out to us. Above the architrave, behind the metopes and triglyphs, there are vacuities sufficiently spacious for a person to walk in, which, in some instances, and perhaps in all, had been carelessly filled with loose materials; but at Pæstum, the same parts of the work are of solid stone, particularly near, the angles of those temples; which consist of such prodigious masses, that it is inconceivable, how they were raised and, adjusted. In other parts of the Parthenon there, are also superfluities; which are unknown in the buildings of Pæstum, where nothing superfluous can be discerned. These remarks, as they were made by an intelligent artist, who, with leisure and abilities for the inquiry, has paid more attention to the subject than any one,

else, we have been careful to preserve. For CHAP. our own parts, in viewing the Parthenon, we were so much affected by its solemn appearance, and so much dazzled by its general splendour and magnificence, that we should never have ventured this critical examination of the parts composing it; nor could we be persuaded entirely to acquiesce in the opinion thus founded upon a comparison of it with the Posidonian and Æginetan buildings. Often as it has been described, the spectator who for the first time approaches it finds that nothing he has read can give any idea of the effect produced in beholding it. Yet was there once found in England a writer of eminence, in his profession as an architect', who recommended the study of Roman antiquities in Italy and in France, in preference to the remains of Grecian architecture in ATHENS; and who, deciding upon the works of Phidias, Callicrates, and Ictinus, without ever having had an opportunity to examine them but in books and prints, ventured

(1) See a Treatise on the Decorative Part of Civil Architecture, by Sir William Chambers, pp. 19, 21, &c. Third edition. Lond. 1791 .-Also Reveley's Reply, in his Pref. to the Third Volume of Stuart's Antiq. of Athens, p. 10. Lond. 1794.

IV.

to maintain that the Parthenon was not so, CHAP. considerable an edifice as the Church of St. Martin in London; thereby affording a remarkable proof of the impossibility of obtaining from. any written description, or even from engraved. representation, any adequate idea of the buildings of Antient Greece; compared with whose. stupendous works, the puny efforts of modern art are but as the labours of children.

By means of the scaffolds raised against the Parthenon, for the Formatori, and for other artists who were engaged in moulding and making drawings from the sculpture upon the frieze, we were enabled to ascend to all the higher parts of the building, and to examine, with the minutest attention, all the ornaments of this glorious edifice. The sculpture on the metopes, representing the Combats of the Centaurs and Lapithæ, is in such bold relief, that the figures are all of them statues. Upon coming close to the work, and examining the state of the marble, it was evident that a very principal cause of the injuries it had sustained was owing, not, as ture of the it has been asserted', to "the zeal of the early

> (1) Memorandum on the subject of the Earl of Elgin's Pursuits in Greece, p. 11. Lond. 1811.

IV.

Cause of the Inju-

ries sustained in

the Sculp-

Parthenon.

Christians², the barbarism of the Turks, or to CHAP. the explosions which took place when the temple was used as a powder magazine," but to the decomposition of the stone itself, in consequence of the action of the atmosphere during. so many ages. The mischief has originated inthe sort of marble which was used for the building; this, not being entirely homogeneous, is characterized by a tendency to exfoliate when long exposed to air and moisture. Anv person may be convinced of this, who will examine the specimens of sculpture which have been since removed to this country from the Parthenon; although, being expressly selected as the most perfect examples of the work, theydo not exhibit this decomposition so visibly as the remaining parts of the building. But

(2) In the little Tract which the author published in 1803, containing the " Testimonies, of different Authors respecting the Statue. of Ceres," p. 4, and also in his Account of the " Cambridge Marbles" published in 1809, p. 15. he attributed to " the zeal of the early Christians" a part of the injury done to the Temple at Eleusis. He has since been much amused by finding the same expression adopted by the writer of the Earl of Elgin's "Memorandum" above cited, where the "early Christians" are made also responsible for the injury done to the metopes of the Parthenon (See Memorandum, p. 11). Now, abating the long arms, or the long ladders, which the said Christians must have called into action to reach the entablature of this building, it does not appear highly probable that the very people who consecrated the Parthenon, as Wheler. says, "TO SERVE GOD IN," would take so much pains to disfigure and to destroy their place of worship.

7

IV.

234

IV.

throughout the metopes, and in all the exquisite CHAP. sculpture of the frieze which surrounded the _ outside of the cell of the temple, this may be observed: a person putting his hand behind the figures, or upon the plinth, where the parts have been less exposed to the atmosphere, may perceive the polished surface, as it was left when the work was finished, still preserving a high degree of smoothness; but the exterior parts of the stone have been altered by weathering; and where veins of schistus in the marble have been affected by decomposition, considerable parts have fallen off. Yet, to operate an effect of this nature, it required the lapse of twenty-three centuries; and we may fairly conclude that what remained had 'under-' gone sufficient trial to have continued unaltered for a series of ages: at all events, it would have been safe from the injuries to which the finest parts of the sculpture have been since so lamentably exposed, when they were torn from the temple, either to be swallowed by the waves of Cythera, or to moulder under the influence of a climate peculiarly qualified to assist their progress towards destruction¹.

^{(1) &}quot;The Ambassador has carried off every rich morsel of sculpture that was to be found in the Parthenon: so that he, in future, who wishes to see Athens, must make a journey to Scotland." Colone? Squire's MS. Correspondence.

It is with reluctance that the author omits a CHAP. IV. description of the whole of the sculpture upon the frieze beneath the ceiling of the Peripterus². To an artist, the boldness and masterly execu- splendid tion of the metopes may be more interesting; but Represena sight of the splendid solemnity of the whole the Par-Panathenaic Festival, represented by the best. artists of Antient Greece, in one continued picture above three feet in height, and originally six hundred feet in length, of which a very considerable portion now remains, is alone worth a journey to Athens; nor will any scholar deem. the undertaking to be unprofitable, who should visit Greece for this alone. The whole popula- Description of the antient city, animated by the bustle work. and business of the Panathenæa, seems to be exhibited by this admirable work; persons of either sex and of every age, priests, charioteers, horsemen, cattle, victors, youths, maidens, victims, gods, and heroes, all enter into the procession; every countenance expresses the earnestness and greatness of the occasion; and every magnificence of costume, and varied disposition of the subject, add to the effect of the representation. It is somewhere said of Phidias,

(2) For a full account of it, see Stuart's Athens, vol. II. p. 12. Lond. 1787.

(, . . . , . .

ATHENS:

CHAP. that, as a sculptor, he particularly excelled in his statues of horses: perhaps some notion may be conceived of the magic of his art, when it is related, that of a hundred horses introduced by him into the Panathenaic pomp, there are not two, either in the same attitude, or which are not characterized by a marked difference of expression. Some circumstances were made known to us by our being able to examine the marble closely, which we did not know before; although they had been alluded to by Stuart': the bridles of the horses were originally of gilded bronze; this we perceived by the holes left in the stone for affixing the metal, and also by little bits of the bronze itself, which the Formatori had found in the work. We should hardly have believed that such an article of dress as the leathern boot, with its top turned over the calf of the leg, was worn by the antient Athenian, as well as by English cavaliers, if we had not seen the Cothurnus so represented upon the figures of some of the young horsemen in this procession; and as coxcomically adapted to the shape of the leg, and set off with as great nicety, as for a Newmarket jockey. Another singular piece of foppery, worn also by the

(1) Antiq. of Athens, vol. II. p. 14. Lond. 1787.

Of the Cothurnus; Athenian beaux, consisted of a light gipsey hat, perhaps made of straw, tied with ribbands under the chin. We noticed the figure of a and Petayoung horseman with one of these hats, who leus. seemed, from his appearance in the procession, to be a person of distinction, curbing a galloping steed; but the wind had blown the hat from his head, and, being held by the ribbands about the neck, it hung behind the rider, as if floating in the air: the sculptor having evidently availed himself of this representation to heighten the appearance of action in the groupe, and nothing could be more spirited. That this kind of hat was considered as a mark of distinction, seems to be probable, from the circumstance of its being still worn by the Patriarchs of the Greek church ²: it appears upon the head of the Patriarch of Constantinople, as he is represented by a wood-cut in the work of Martin Crusius'; but perhaps, in the latter instance, it should rather be considered as the petasus⁴, than the pileus. Also, by attending to its appearance upon Grecian vases of terra cotta, we may perceive that it was worn by no common individuals.

CHAP.

ATHENS!

A beautiful figure of Actaon, with this kind of CHAP. hat, is preserved upon one of the Greek Marbles in the University Library at Cambridge': and another representation of the same person, similarly attired, appears upon the Neapolitan Vase^{*}, where there is also an effigy of Castor with the *pileus* upon his head; for Actaon, in both instances, is figured with his head uncovered, the hat hanging, by its ribbands, ingraceful negligence behind his shoulders; and after this manner it is more frequently represented. Among the Romans, who rarely used any covering for the head, the pileus, when worn, was the distinguishing badge of freedmen; and the use of it, as a privilege, was granted to persons who had obtained their liberty. In the Heroic age no kind of hats were worn, if we may judge from the Poems of Homer, where there is no allusion to any such article of apparel. Indeed, Eustathius, affirms that the Romans derived their custom of going

> (1) This marble represents the body of an Amphora, about three feet in length, from the shore of the Propontis." It was presented to the University by Mr. Spencer Smith, late Minister Plenipotentiary at the Optoman Porte, and brother of Sir Sidney Smith. The sculpture is in low relief, but it is very antient.

were concerned with the suit with provide

238

IV.

bareheaded from the Greeks': hence it may almost be proved, that in this bas-relief, (as nothing was ever introduced by antient artists into their designs without some symbolic allusion,) the hat was intended as a distinguishing token⁴; and its appearance is the more interesting, because it has been the opinion of antiquaries that this frieze contained the portraits of the leading characters at Athens, during the Peloponnesian war; particularly of Pericles, Phidias, Socrates, and Alcibiades'.

We saw with the same advantage all the Practice of remaining sculpture of this stately edifice; visiting it often afterwards to examine the different parts more leisurely. Among the remains of the sculpture in the western pediment, which is in a very ruined state, the artists had observed, not only the races of paint with which the statues had antiently been covered, but also of gilding. It was usual to gild the

(3) Vid. Eustath. in Homer. Odyss. lib. i.

(4) It is still so considered at Athens: Guillettere, in giving an account of the Vecchiados or Elders, selected out of the principal Christian families, forming a part of the jurisdiction of the city, says they are distinguished from the other citizens by wearing " little. hats." These are his words :- "Les Vecchiados portent de petits chapeaux, pour les distinguer des autres habitans." Voyage d'Athénes, p. 159. Paris, 1675.

hair of the statues which represented Deities, and sometimes other parts of the bodies. This practice remained to a very late period of the art, as it has been already shewn in a former part of this work'. During an excavation which Lusieri had carried on here, he had discovered the antient pavement, in its entire state; consisting of the same white marble as the temple. We found an Inscription, which proves how antient the custom was of pronouncing the Greek B like the Roman V, by the manner of writing a name which must have been their Victorinus: "PHANÉAS, HIERO-PHANT, SON OF VICTORINUS."

¢ANEIACTHCBIKTωPEI NOYIEPO¢ANTHC

Marbles used in the Acropolis. Among the ruins of this and of other buildings in the Acropolis, we noticed the fragments of almost every kind of marble, and of the most beautiful varieties of breccia; but particularly of the verd-antique, entire columns of which had once adorned the Erecthéum. Under a heap of loose stones and rubbish in the centre of it, we discovered the broken shaft of a verd-antique pillar of uncommon beauty: this we purchased of the Disdar; and having with great difficulty

(1) See Vol. V. Chap. IV. p. 205 of the 8vo Edition of these Travels.

241

CHAP. IV.

removed it from the Acropolis, we sent it to England^{*}. A bluish-grey limestone was also used in some of the works; particularly in the exquisite ornaments of the Erecthéum, where Singular Constructhe frieze of the temple and of its porticoes are tion of the not of marble, like the rest of the building, but Erecthéum. of this sort of slate-like limestone : the tympanum of the pediment is likewise of the same stone; a singular circumstance truly, and requiring some explanation³. It resembles the limestone employed in the walls of the Cella of the Temple of Ceres at Eleusis, and in buildings before the use of marble was known for purposes of architecture; such, for example, as the sort of stone employed in the Temple of Apollo at Phigalia⁴, and in other edifices of equal antiquity: it effervesces briskly in acids, and has all the properties of common compact limestone; except that it is hard enough to cut glass,

(2) It is now in the Vestibule of the University Library at Cambridge. See "Greek Marbles," No. XVII. p. 39. Camb. 1809.

(3) For this fact the author is indebted to Mr. Wilkins, author of the Antiquities of Magna Gracia, &c.

(4) Specimens of this slate-like limestone were brought to the author for the Mineralogical Lecture at Cambridge, from the Temple of the Phigalian Apollo in the Morea, by Mr. Walpole. It is also found upon Parnassus, and in other parts of Greece. Some of the limestone of Parnassus breaks with a conchoïdal fracture, and is hard enough to cut glass.

VOL. VI.

CHAP. and, of course, is susceptible of a fine polish; exhibiting a flat conchoïdal fracture, which is somewhat splintery. We could not discover a single fragment of porphyry; which is remarkable, as this substance was almost always used by the Antients in works of great magnificence. Among the loose fragments dispersed in the Acropolis, we found a small piece of marble with an inscription, but in so imperfect a state, that it is only worth notice as a memorial of the place where it was found, and in its allusion to the Prytanéum, which is the only legible part of it'. That the Prytanéum, where the written laws Of the Pryof Solon were kept², was not situate near to the spot, but in the lower city, may be easily proved. Yet some have believed that it was in the Acropolis; owing to that remarkable passage in Pausanias, which set at rest the mistaken opinion of Ptolemy's importation of the worship of Serapis into EGYPT; Memphis having been the original source of this superstition, both for the Alexandrians and the Athenians3. After

IV.

tanéum.

speaking of the PRYTANÉUM, Pausanias says*, "Hence, to those going towards the lower parts of the city, the Temple of Serapis presents itself, whose worship the Athenians received from Ptolemy:" adding, "Among the Egyptian fanes. of this Deity, the most renowned, indeed, is that of ALEXANDRIA, but the most antient that of MEMPHIS." But, in answer to this, it may be observed, that the same author also ascends from the Prytanéum, along the street of the Tripods, towards the Propylæa'. Moreover, it is recorded, that the tablets of the laws which had been preserved in the Citadel were afterwards removed to the Prytanéum⁶; and they were termed rous zάτωθεν νόμους, because they were kept in the lower city.

With regard to the ERECTHÉUM, which is *Erecthéum*. situate at the distance of about a hundred and fifty feet to the north of the *Parthenon*, it has generally been described as consisting of three

(4) 'Εντιύδιν ἰοῦσιν ἰς τὰ κάτω τῆς πόλεως, Σαξάπιδός ἰστιν ἰερὸν, ὅν 'Αθηναῖοι παρὰ Πτολεμαίου θεὸν ἰσηγάγοντο. Λἰγυπτίοις δὶ ἰερὰ Σαξάπιδος, ἰπιφανίστατον μίν ἰστιν 'Αλεξανδρεῦσιν, ἀζχαιότατον δὲ ἰν Μέμφει. Pausania, lib. i. c. 18. p. 42. Lips. 1696.

CHAP. IV.

CHAP. contiguous temples; that of Erectheus, of Minerva IV. Polias, and of Pandrosus. Stuart considered the eastern part of the building alone as being the Erecthéum; the part to the westward as that of Minerva; and the adjoining edifice on the south side, distinguished by the Caryatides supporting the entablature and roof, as the chapel which was dedicated to the Nymph Pandrosus'. This opinion has been adopted by other writers²: but it seems more consistent with the description and allusions to this building in the works of antient authors, to suppose that the whole structure was called ERECTHÉUM, consisting only of two contiguous temples; that of Minerva Polias, Temples of Pandrowith its portico towards the east; and that of sus and Minerva Pandrosus towards the west, with its two porti-Polias. coes standing by the north and south angles, the entrance to the Pandroseum being on the northern side³. Pausanias⁴ calls the whole building EPEXOEION, and he decidedly describes it, not

as of a triple, but as of a duple form'; and in the succeeding chapter he mentions the two parts of which it consisted, naming them the Temples of Pandrosus and Minerva⁶. The sepulchral origin of the Parthenon, as of all the Athenian temples, has been already proved; and the same historian who has preserved a record of the situation of the sepulchre of Cecrops also informs us that the tomb of Ericthonius existed in the Temple of Minerva Polias⁷. The Turks had made a powder-magazine of one of the vestibules of this building; so that it was necessary to creep through a hole in the wall in order to see the finest specimen of Ionic architecture now existing: it was an inner door of one of the temples; and it has been judiciously remarked⁸ of the sculpture everywhere displayed in this edifice, that "it is difficult to conceive how marble has been wrought to such a depth and brought to so

sharp an edge, the different ornaments having all the delicacy of works in metal." Lusieri, for whom and for the other artists this passage had been opened, said, that he considered the workmanship of the frieze and cornice, and of the Ionic capitals, as the most admirable specimens of the art of sculpture in the world¹: he came daily to examine it, with additional gratification and wonder. He directed our attention to the extraordinary state of preservation in which the Caryatides of the Pandroseum still remained: passing the handover the surface of the marble upon the necks of these statues, it seemed to retain its original polish in the highest perfection. Within this building, so late as the second century, was preserved the olive-tree mentioned by Apollodorus²,

Of the Olive;

(1) Mr. Cripps has preserved, in his MS. Journal, a note, dictated by Lusieri, relative to a very curious discovery made by that artist with regard to the sculptured ornaments of the Erecthéum. The author also well remembers its being pointed out to him by the same person, upon the spot. Lusieri found among the most delicate intertexture of the wreaths and foliage, small brass nails, and bits of antique glass, which had been fastened on to heighten the general delicacy and exquisite finishing of the work. This circumstance has been noticed by no other traveller. Perhaps, according to our notions of taste, as founded upon the Grecian School, these works appear more beautiful in their present nakedness than they would have done if we had beheld them as they were originally finished, when they were painted and gilded, and studded with glass beads, or invested with other extraneous ornament.

(2) Vid. Pausan. lib. i. c. 27. p. 64. Lips. 1696.

246

which was said to be as old as the foundation of the citadel. Stuart supposed it to have stood in the portico of the Temple of Pandrosus (called by him the Pandroseum), from the circumstance of the air necessary for its support, which could here be admitted between the Caryatides; but instances of trees that have been preserved. unto a very great age, within the interior of an edifice inclosed by walls, may be adduced. The building was of course erected subsequently to the growth of the tree, and was in some degree adapted to its form. A very curious relic of this kind may be seen at Cawdor Castle, near Inverness, in Scotland; in which building a hawthorn-tree of great antiquity is very remarkably preserved. Tradition relates, that the original proprietor of the edifice was directed by a dream to build a castle exactly upon the spot where the tree was found; and this was done in such a manner as to leave no doubt but that the tree existed long before the structure was erected. The trunk of this tree, with the knotty protuberances left by its branches, is still shewn' in a vaulted apartment at the bottom of the principal tower: its roots branch out beneath

(3) The author saw it in 1797. The name of the building, as it is now pronounced, is not Cawdor, but Calder Castle.

CHAP. IV.

CHAP. the floor, and its top penetrates the vaulted arch of stone above, in such a manner that any person seeing it is convinced the masonry was adjusted to the shape and size of the plant, a space being left for its admission through the top of the vault. The hawthorn-tree of Cawdor Castle, and the traditionary superstition to which it has owed its preservation during a lapse of centuries, may serve as a parallel to the history. of the Athenian Olive, by exhibiting an example nearly similar; the one being considered as the Palladium of an antient Highland Clan', and the other regarded as the most sacred relic of the Cecropian Citadel. Within the Erecthéum was the Well of salt water, also shewn as a mark of the contest for Attica between Neptune and Minerva[®]. This well is mentioned by Wheler's, who could not obtain permission to see it: he was assured that it was "almost dry" when he visited the

and of the Well.

> (1) It had been a custom, from time immemorial, for guests in the castle to assemble around this tree, and drink " Success to the hawthorn," or, in other words, " Prosperity to the beam of the house of Cawdor;" upon 'the principle observed still in Wales, of figuratively connecting the upright prop or beam, which, in old houses, extended from the floor to the roof, with the main-stem or master of a family. The first toast after dinner in a Welch mansion is, generally, "The chief beam of the house."

248

IV.

Acropolis: but before Wheler arrived in Athens, it had been seen and very curiously described by Guilletiere, whose account of the notions entertained concerning it by the inhabitants exactly corresponds with all that Pausanias had related of its antient history⁴. The existence of the well, in such a remarkable situation, identifies the Erecthéum better than any proof derived from the present appearance of the building.

We dined with Signor Lusieri and the artists who were his fellow-labourers in the Acropolis, upon a boiled kid and some rice. Honey from Mount Hymettus was served, of such extraordinary toughness and consistency, although quite transparent, that the dish containing it might be turned with its bottom upwards without spilling a drop; and the surface of it might also be indented with the edge of a knife, yielding to the impression without separation, like a mass of dough. As an article of food, it is reckoned

(4) "Au sortir du temple nous vîmes, à cinquante pas de là, ce puys célébre, dout on a toujours parlé comme d'une des merveilles de la Nature; et adjourd'huy les Athéniens le content pour une des plus curieuses raretéz de leur pays. Son eau est salée, et a la couleur de celle de la mer: toutes les fois que le vent du midy souffle, elle est agitée, et fait un grand bruit dans le fond du puys." Voyage d'Athénes, p. 298, à Paris, 1675. CHAP. IV.

CHAP. very heating; and persons who eat much of it IV. are liable to fever. We tasted the wine of Athens, which is unpleasant to those who are not accustomed to it, from the quantity of resin and lime infused as substitutes for brandy. After dinner we examined the remains of the PROPYLÆA; concerning which we have little to Propylæa. add to the remarks already published. Over the entrance may be seen one of those enormous slabs of marble, called marble beams by Wheler'; and to which Pausanias particularly alluded, when, in describing the Propylæa, he says, that, even in his time, nothing surpassing the beauty of the workmanship, or the magnitude of the stones used in the building, had ever been seen². We have since compared the dimensions of this slab with those of an architrave of much greater size, namely, that which covers the entrance to the great sepulchre at Mycenæ; for it is remarkable that Pausanias, who would have mentioned the fact if he had seen the latter, gives a very detailed account of the ruins of that city, and yet takes no notice of the most prodigious mass perhaps ever raised for any purpose of

⁽¹⁾ Journey into Greece, Book V. p. 359. Lond. 1682.

⁽²⁾ Τά δι Πεοπύλαια λίθον λευχοῦ σὰν δροφὰν ἴχιι, καὶ κόσμο καὶ μεγίθι τῶν λίθων μέχρι γι καὶ ἰμοῦ προιῦχι. Pausaniæ Attica, c. 21. p. 51. Lips, 1696.

architecture, and which is nearly four times as large' as any of the stones that so much excited his admiration in viewing the Propylæa. This magnificent building, fronting the only entrance to the Citadel, has also experienced some of the effects of the same ill-judged rapacity which was levelled against the Parthenon. If the influence of a better spirit do not prevent a repetition of similar "Pursuits in Greece," ATHENS will sustain more damage in being visited by travellers, calling themselves persons of taste, than when it was forgotten by the world, and entirely abandoned to its barbarian possessors: in a few years, the traveller even upon the spot must be content to glean his intelligence from the representation afforded by books of Travels, if he should be desirous to know what remained of the Fine Arts so lately as the time

(3) The slab at Mycenx is of lreccia, twenty-seven feet long, seventeen feet wide, and above four feet and a half in thickness. That which remains at the Propylxa is of white marble, cut with the utmost precision and evenness: its length is seventeen feet nine inches. The former has quite an $\mathcal{E}gyptian$ character: the latter bespeaks the finer art of a much later period in history. But the slab of marble at the Propylxa is not the largest even in Athens; an architrave belonging to the Temple of Jupiter Olympius exceeds it in cubical dimensions: the length of this architrave equals twenty-two feet six inches; its width three feet; and its height six feet six inches. See Stuart's Athens; Pref. to vol. 111. p.9. Lond. 1794. CHAP. IV.

Valls mine of the Acropolis. Acro

in which the city was visited by Wheler, by Chandler, or by Stuart. We afterwards examined the remains of the original walls of the Acropolis; and observed some appearances in the work which had not at that time, so far as our information extended, been noticed by preceding travellers. Those walls exhibit three distinct periods of construction; that is to say, the masonry of modern times in the repairs; a style of building which can only be referred to the age of Cimon, or of Pericles; and the antient Pelasgic work, as mentioned by Lucian¹. This was pointed out to us by Lusieri; but the circumstance which had escaped his notice, which we afterwards ascertained, was, that a row of triglyphs, and intervening metopes, had been continued all round the upper part of the walls, immediately beneath the coping. Other travellers have since observed and mentioned the same fact²: hence it is evident, from the circumference of the Acropolis being thus characterized by symbols of sacred architecture, that the whole peribolus was considered as one vast and solemn sanctuary. We have an instance of the same kind of sanctuary in modern times, and in our own age.

⁽²⁾ Memorandum, &c. p. 28. Lond. 1811.

The Kremlin at Moscow, the Acropolis of a city CHAP. whose inhabitants have preserved, with their religion, many a remnant of Grecian manners, is in like manner held sacred by the people; and no person is permitted to pass the "Holy Gate." leading to the interior, but with his head uncovered³.

We then descended, to visit the ODEUM OF REGILLA, (the building we had passed in the morning,) at the foot of the rock of the Acropolis, and upon its south-western side*. The remains of this edifice are those which Wheler and all former travellers, excepting Chandler, even to the time of Stuart, have described as the THEATRE OF BACCHUS. Chandler considered it as the Odéum of Pericles, rebuilt by Herodes Atticus. But Pausanias, speaking of the Odéum erected by Herodes in memory of his wife, mentions it as an original structure. It was therefore distinct both from the edifice erected by Pericles and from the Theatre of Bacchus; so that, perhaps, no doubt will hereafter be entertained upon the subject, so far as

(3) See Vol. I. of these Travels, Chap. VII. p. 149. Octavo Edit. (4) See the Plan of Athens, engraved as a Vignette to this Chapter.

IV.

Odéum of Regilla.

CHAP. IV.

this building is concerned'. All the remaining parts of this most costly theatre are, *first*, three rows of circular arches, one row above another, facing the *south-west*; and these now constitute an out-work of the fortress, but originally they belonged to the exterior face of the *Scene*: *secondly*, the *Coilon* for the seats of the spectators, at present almost choked with soil²,

(1) See the Vignette to this Chapter. The Odéum of Pericles was on the south-east side, and, according to Vitruvius, upon the left of those who came out of the THEATRE OF BACCHUS : " Excuntibus a theatro sinistrá parte, ODEUM, quod Athenis Pericles columnis lapideis disposuit." (Vitruv. lib. v. c. 9.) It is this circumstance alone which has caused the Odéum of Herodes to be confounded with that Theatre; but the monument alluded to by Vitruvius was at the end of the Street of the Tripods, and between that street and the Theatre of Bucchus. There were three different monuments which had received the name of Odeum : one at the south-east angle of the Citadel, which was the Odéum of Pericles; another at the south-west angle; which was the Odéum of Herodes Atticus. The Odćum mentioned by Pausanias is again considered as a third: the Abbé Barthelemy believed the Pnyx to have been called Odéum by Pausanius. The subject is, indeed, somewhat embarrassed: and the reader, who wishes to see it more fully illustrated, may consult the Notes to the 12th Chapter of the Voyage du Jeune Anacharsis, tom. 11. p. 542. sur le Plan d' Athénes (à Paris, 1790); and the authorities cited by its author.

(2) There is a fine view of the interior published in the second volume of *Stuart's Athens*, ch. iii. Pl. 1.; but the representation; from a drawing by *Preaux*, will, perhaps, be found more faithful, as to its external appearance. (*See the Quarto Edition*, Vol. III. p. 506.) . It also affords one of the most interesting views of the *Acropolis*; shewing the situation of the *Propylæa*, the *Parthenon*, and, to the right of the *Theatre of Herodes*, the site of the *long Porticoes* surmounted by the *two* Nearly all that we know of the building is CHAP., derived from an accidental allusion made to it, by Pausanias, in his description of Achaia; for it was not erected, as he himself declares, when he had finished his account of Attica³. It was raised by Herodes, in memory of his wife; and considered as far surpassing, in magnitude and in the costliness of its materials, every other edifice of the kind in all Greece⁴. The roof of it was of cedar. The Coilon for the seats was scooped in the solid rock of the Citadel; a practice so antient, that from this circumstance alone a person might be induced to believe, with Chandler, some more antient theatre existed upon the spot before Herodes added any thing to the work. The first thing that strikes a modern traveller, in viewing the Grecian theatres, is the shallowness of the Proscenion, or place for the stage. It is hardly possible to conceive how, either by the aid of painting or by scenic decoration, any tolerable appearance of distance or depth of view could be imitated.

two Choragic Pillars near to the Theatre of Bacchus, the columns of Hadrian's Temple of Olympian Jove, and a distant view of the ridge of Hymettus.

CHAP. IV.

256

The actors must have appeared like our modern mountebanks upon a waggon. But so little is known of the plan of an antient theatre, particularly of the Proscenion, and the manner in which the Dramas were represented, that the most perfect remains which we have of such. structures leave us still in the dark respecting the parts necessary to compose the entire building. There is no traveller who has better compressed what antient and modern writers have said upon the subject, or in a more perspicuous manner, than Guilletiere; who piqued himself upon the value of his observations¹, although no one since has ever noticed them. It is observed by him', that among all the subjects of which antient authors have treated, that of the construction of their theatres is the most obscure, the most mutilated, and delivered with the most contradiction. Vitruvius, says he, conducts his readers only half way': he gives neither the dimensions, nor the situation, nor the number of the principal parts; believing them to be sufficiently well known, and never

- [±] (2) Ibid.
 - (3) . . . "à moitié chemin." Ibid.

^{(1) &}quot;Je vous avouë franchement que c'est icy que je prétens bien vous faire valoir la peine de mes voyages, et le fruit de mes observations." Voyage d'Athènes, p. 306. à Paris, 1675.

once dreaming that they were likely to perish. CHAP. For example, he does not determine the quantity of the Diazomata, or Præcinctiones, which we call corridors, retreats, or landing-places: and even in things which he does specify, he lays down rules which we actually find were never attended to; as when he tells of two distinct elevations observed in the construction of their rows of benches, and neither the one nor the other accords with any thing now remaining of the antient theatres. Among modern writers, the Jesuit Gallutius Sabienus, and the learned Scaliger, have neglected the most essential parts: and the confused mass of citations collected by Bulengerus intimidates any one who is desirous to set them in a clear light: after being at the pains to examine his authorities, and glean whatever intelligence may be derived from Athenæus, Hesychius, Julius Pollux, Eustathius, Suidas, and others, our knowledge is still very imperfect. The Greek theatres were in general open; but the Odéum of Regilla was magnificently covered, as has been stated, with a roof of cedar. The Odéum of Pericles, or Music Theatre, was also covered; for, according to Plutarch, it was the high-pointed and tentlike shape of its roof, which gave occasion to the comic poet Cratinus to level some ingenious VOL. VI.

CHAP. r IV.

raillery at *Pericles*, who had the care of it¹. In their open theatres, the *Greeks*, being exposed to the injuries of weather, commonly made their appearance in large cloaks; they also made use of the *sciadion*, answering to our *umbrella*, as a screen from the sun. The plays were performed always by day-light. When a storm arose, the theatre was deserted, and the audience dispersed themselves in the outer galleries and adjoining porticoes². During their most magnificent spectacles, odoriferous liquors were showered upon the heads of the people; and the custom of scattering similar offerings upon the heads of the people was often practised at *Venice* during the Carnival.

Description of an antient Greek Theatre. By the word *Theatre*, the Antients intended the whole body of the edifice where the people assembled to see their public representations³. The parts designed for the spectators were called the *Conistra*, or pit; the rows of benches;

(3) Plutarch considers \mathfrak{Size}^{or} to be derived from \mathfrak{Side} ; because, before theatres were built, the *Chorus* sang the praises of their Gods, and the commendation of illustrious men.

the Diazomata, or corridors; the little stairs; the Cercys; and the Echea. The other principal parts of the theatre, belonging to the actors, were called the Orchestra: the Proscenion: and the Scene, that is to say, the front or face of the decorations; for, properly, the word Scene has no other signification. The interior structure extended like the arc of a circle, reaching to the two corners of the Proscenion : above that portion of the circumference were raised four and twenty rows of benches, surrounding the Conistra, or pit, for the spectators. These benches, in their whole height, were divided into three sets by the Diazomata or corridors, consisting of eight rows in each division. The Diazomata ran parallel to the rows of seats, and were of the same form; they were contrived as passages for the spectators from one part of the theatre to another, without incommoding those who were seated: for the same convenience. there were little steps' that crossed the several rows, and reached from one corridor to another, from the top to the bottom, so that persons

(4) Each of those little steps was exactly half the height of one of the benches. They formed diverging radii from the *Conistra*. Such staircases remain very entire in the theatres of *Asia Minor*, as at *Telmessus*; in *Epidauria*; at *Sicyon*; *Charonaa*; &c. CHAP. IV.

CHAP. might ascend or descend without incommoding IV.

the audience. Near to those staircases were passages leading to the outer porticoes, by which the spectators entered to take their places. The best places were in the middle tier, upon the eight rows between the eighth and the seventeenth bench. This part of the theatre was called Bouleuticon; it was set apart for the magistrates. The other tiers were called Ephebicon, and were appropriated to the citizens after they had attained their eighteenth year. Along each corridor, at convenient distances, in the solid part of the structure, were small cellular cavities, called Echaa, containing brass vessels, open towards the Scene. Above the upper corridor there was a gallery or portico, called Cercys, for the women; but those who had led disorderly lives had a place apart for their reception. Strangers, and allies who had the freedom of the city, were also placed in the Cerciys. Individuals had also, sometimes, a property in particular places; which descended by succession to the eldest of the family.

Thus much for the parts appropriated to the spectators. With regard to others belonging to the Drama, the Orchestra (an elevation out of

the Conistra or pit) began about fifty-four feet from the face of the Proscention or stage, and ended at the Proscenion. Its height was about four feet; its shape, an oblong parallelogram, detached from the seats of the spectators: here were stationed the musicians, the choir, and the mimics. Among the Romans it was destined for a more noble use; the Emperor, the Senate, the Vestals, and other persons of quality, having their seats upon it. The Proscenion or stage was raised seven feet above the Orchestra, and eleven above the Conistra; and upon it stood an altar dedicated to Apollo. The part called the Scene was nothing else than the columns, and architectural decorations, raised from the foundations and upon the wings of the Proscenion, merely for ornament. When there were three rows of pillars one above another, the highest row was called Episcenion. Agatarchus was the first architect who decorated the Scene according to the rules of perspective: he received his instructions from Æschylus'. The theatres of

(1) Besides the parts of a Greek Theatre here enumerated, Guilletiere mentions the Logeion, or Thymelé, which the Romans called Pulpitum; and the Hyposcenion; both which were parts of the Orchestra. Also the Parascenion, or space before and behind the Scene; and a species of machinery for introducing the Gods, which was called Theologeion. CHAP.

IV.

CHAP. Greece and Asia Minor were not solely appropriated to plays and public shows; sometimes they were used for state assemblies; and occasionally as schools, in which the most eminent philosophers harangued their scholars. St. Paul was desirous to go into the theatre at Ephesus, to address the people, during the uproar caused by Demetrius the silversmith¹; but was intreated by his disciples not to present himself there, through fear that he would encounter the violence which Gaius and Aristarchus had already experienced³.

> From the Odéum of Regilla we went to the AREOPAGUS; wishing to place our feet upon a spot where it is so decidedly known that St. Paul had himself stood, when he declared unto the Athenians³ the nature of THE

(1) Acts xix. 30, 31.

(2) This brief survey of the form of an antient *Greek* theatre, and of its various parts, will be found useful to travellers, during their examination of the remains of such structures. Those who wish to see the subject more fully discussed, may consult *Guilletiere*; from whose researches, added to his personal observations, it has been, with very little alteration, derived. The author, having already proved its accuracy, by comparing it with the Notes he made among the ruins of the *Grecian* theatres, and finding that it had been unaccountably overlooked, conceived it might make a useful addition to his work.

(3) Acts xvii. 22.

262

UNKNOWN GOD whom they so ignorantly worshipped, and opposed the new doctrine of v "Christ crucified" to the spirit and the genius of the Gentile faith. They had brought him to the Areopagus, to explain the nature of the rash enterprise in which he was engaged; and to account for the unexampled temerity of an appeal which called upon them to renounce their idols, to abolish their most holy rites, and to forsake their Pantheon for One only God "who dwelleth not in temples made with hands,"-the God of the Hebrews too, a people hated and despised by all. It is not possible to conceive a situation of greater peril, or one more calculated to prove the sincerity of a preacher, than that in which the Apostle was here placed: and the truth of this, perhaps, will never be better felt, than by a spectator who; from this eminence, actually beholds the stately monuments of Pagan pomp and superstition by which he, whom the Athenians consider as "the setter-forth of strange Gods," was then surrounded; representing to the imagination the disciples of Socrates and of Plato, the Dogmatist of the Porch, and the Sceptic of the Academy, addressed by a poor and lowly man, who, "rude in speech," without the "enticing words of man's wisdom," enjoined precepts contrary to their

263

CHAP IV.

taste, and very hostile to their prejudices. One CHAP. IV. of the peculiar privileges of the Areopagitæ seems to have been set at defiance by the zeal of .St. Paul upon this occasion; namely, that of inflicting extreme and exemplary punishment upon any person who should slight the celebration of the holy mysteries, or blaspheme the Gods of Greece. We ascended to the summit, by means of steps cut in the natural stone, The sublime scene here which is of breccia. exhibited is so striking, that a brief description of it may prove, how truly it offers to us a commentary upon the Apostle's words, as they were delivered upon the spot. He stood upon the top of the rock, and beneath the canopy of heaven'. Before him there was spread a glorious prospect of mountains, islands, seas, and skies: behind him towered the lofty

> (1) The Senate of the Arcopagus assembled sometimes in the Royal Portico; (vid. Demosth. in Aristog. p. 831.) but its most ordinary place of meeting was on an eminence at a small distance from the Citadel, (Herodot. lib. viii. c. 52.) called "Aeuos $\pi a \gamma os$. Here a space was levelled for this Court, by planing the summit of the rock; and the steps which conducted to it were similarly carved out of the solid stone. In this respect it somewhat resembled Pnyx. The origin of this Court may be traced back to the time of Cecrops (Marmor. Oxon. Epoch. 3.) The Arcopagus had no roof; but it was occasionally defended from the weather by a temporary shed. (Jul. Poll. lib. viii. c. 10. Vitrue. lib. ii. c. 1.)

Acropolis, crowned with all its marble temples. CHAP. Thus every object, whether in the face of -Nature or among the works of Art, conspired to elevate the mind, and to fill it with reverence towards that BEING "who made and governs the world"; who sitteth in that light which no mortal eye can approach, and yet is nigh unto the meanest of his creatures; "in whom we live, and move, and have our being."

Within the Peribolus of the AREOPAGUS was the Monument of Œdipus, whose bones, according to Pausanias', were brought hither from Thebes; and the actual site of the altar mentioned by the same author may still be seen in the rock. It is scarcely necessary to repeat the history of a place so well known, and so long renowned for the impartial judgment which was here administered*. 265

Temple of the Winds.

CHAP. THE next morning, October the thirtieth, we received a visit from the English Consul, Signor Spiridion Logotheti, who accompanied us to the Waiwode, or Turkish Governor. This ceremony being over, Lusieri conducted us to see the famous marble TEMPLE OF THE WINDS, at a short distance from the bazar. This octagonal building is known to be the same which Vitruvius mentions, but it is entirely unnoticed The soil has been raised all by Pausanias. around the tower, and in some places accumulated to the height of fifteen feet: owing to this circumstance, the spectator is placed too near to the figures sculptured in relief upon the sides of the edifice; for these appear to be clumsy statues, out of all proportion to the

building. Lusieri believed that it had been the CHAP. original design of the architect to raise those figures to a greater elevation than that in which they were viewed even before the accumulation of the soil. Stuart has been so explicit in the description of the building and every thing relating to it, that he has left nothing to be added by other travellers'. It seems the Christians once made use of it as a church; and their establishment has been succeeded by that of a college of Dervishes, who here exhibit their peculiar dance. Probably it was one of the sacred structures of the antient city; and, as a place of religious worship, served for other purposes than that of merely indicating the direction of the Winds, the Seasons, and the Hours. The author of the Archæologia Græca seems to have entertained this opinion, by calling it, after Wheler, a Temple of the Eight Winds².

We then went to the *bazar*, and inspected the market. The shops are situate on the two sides of a street lying to the north of the *Acropolis*, which is close and parallel to the wall and

CHAP. v. Unknown Structure of the Corinthian Order.

columns of a magnificent building of the Corinthian order. The entablature, capitals, and parts of the shafts of these columns, may be viewed from the street; but the market is, for the most part, covered by trellis-work and vines. So little is known concerning the history of this building, that it were vain to attempt giving an account of it. Spon', Wheler', and Le Roy', call it the Temple of Jupiter Olympius. The temples of Jupiter were generally not, like this building, of the Corinthian, but of the Doric order: the same objection, however, applies to the received opinion concerning those columns of Hadrian near the Ilissus, which are now believed to have belonged to that temple. Stuart considered this Corinthian structure near the bazar as the STOA, or portico, which was called Poihile⁴ or Pæcile. A fine view of the bazar, and also of the building, is given in Le Roy's work'. It is highly probable that the The Bazar. bazar is situate upon the antient market of the

inner CERAMICUS, and near to the site of the CHAP. greater AGORA, from the circumstance of the Inscription mentioned by Spon and by Wheler, containing a decree of the Emperor Hadrian relating to the sale of oil, which was found upon the spot⁶. And if this be true, the Corinthian edifice may be either the old Forum of the inner Ceramicus, called APXAIA AFOPA, where the public assemblies of the people were held, which is the most probable conjecture as to its origin, or the remains of the Temple of Vulcan, or of Venus Urania; for the Doric portico which Stuart believed to have belonged to the Agora⁷ is exactly in a line with the front of this building; and its situation corresponds with that of the portico called Basiléum by Pausanias, beyond which the Temple of Vulcan stood⁸. The measures for dry things, in the bazar, were fashioned in the antient style, and of the materials formerly used, being made of white marble; but their capacity has been adapted to modern

Population and Trade of Athens.

customs: instead of the medimnus, the chanix, and the *xestes*, we found them to contain two quintals, one quintal, and the half quintal. The population of Athens amounts to fifteen thousand, including women and children. The principal exports are honey and oil: of the latter they send away about five vessels freighted annually. Small craft, from different parts of the Archipelago, occasionally visit the Piræeus and the neighbouring coast, for wood. The shops maintain an insignificant traffic in furs and cloth. The best blue cloth in Athens was of bad German manufacture, selling under the name of English. Indeed, in almost all the towns of Europe, when any thing is offered for sale of better manufacture than usual. it is either English, or said to be English¹, in order to enhance its price.

(1) For the most accurate information respecting the commerce of Greece, in all its parts, the Reader is referred to the publication of Mons. Beaujour (Tableau du Commerce de la Grèce, par Felix Beaujour, Ex-Consul en Grèce. Paris, 1800.) Upon the subject of "La draperie Anglaise," these imitations of English cloth are mentioned as having the preference over the original manufacture. "Depuis cette époque (1731) le crédit de la draperie Anglaise a toujours baissé. On a vu sur cette place le débit des Londres diminuer progressivement par la concurrence de nos londrins, faits à leur imitation. Les londres sont des draps légers et grossiers, ainsi nommés, parce que les premièrs fabriques furent établiés à Londres. L'assortiment était d'abord invariablement un tiers vert, un tiers bleu, et un tiers garance. On demande aujourd'hui des assortimens composés tout de bleu." Tableau du Comm. tom. 11. p. 8.

The silversmiths were occupied in making coarse rings for the Albanian women; and the poor remains of Grecian painters in fabricating, rather than delineating, pictures of Saints and Virgins. Their mode of doing this may serve Manufacto shew how exactly the image of any set of Pictures. features, or the subject of any representation, may be preserved unaltered, among different artists, for many ages. The prototype is always kept by them, and transmitted with great care from father to son (for in Greece, as in China, the professions are often hereditary, and remain in the same family for a number of generations): it consists of a piece of paper upon which the outline and all the different parts of the design, even to the minutest circumstance, have been marked by a number of small holes pricked with the point of a pin or a needle. This pattern is laid on any surface prepared for painting, and rubbed over with finely-powdered charcoal: the dust-falling through the holes leaves a dotted outline for the painter, who then proceeds to apply the colours much after the same manner, by a series of other papers having the places cut out where any particular colour is to be applied. Very little skill is requisite in the finishing; for, in fact, one of these manufacturers might with just as much ease give a rule to

VOL. VI.

CHAP. State of the Arts.

make a picture, as a tailor to cut out a suit of CHAP. clothes: the only essential requisite is a good set of patterns, and these are handed from father to son. Hence we learn the cause of that remarkable stiffness and angular outline. which characterize all the pictures in the Greek churches: the practice is very antient; and although the works of some Greek painters, which yet remain, enable us to prove that there were artists capable of designing and drawing in a more masterly manner, yet it is highly probable that the pictures of the Antients were often of this description. Whoever attentively examines the paintings upon terra-cotta vases, executed in the style called Monochromatic'. Monochrowill be convinced that such a process was used; Painting only with this difference: the parts for the Antients. picture were either left bare, being covered by the pattern, and the whole surface of the vessel which remained exposed was coated with black paint; or, cavities being cut out for the figures, were filled with the black or white colour, and the rest of the vase possessed the natural hue of the clay after being baked. The latter process

> (1) "Secundam singulis coloribus, et monochromaton dictam, postquam operosior inventa erat." Plin. Hiet. Nat. lib. xxxv. c. 3. tom. III. p. 417. L. Bat. 1635.

274

matic

of the

was the more antient; and vases of this description are decorated with black, or very rarely ____ with white, figures and ornaments upon a red ground. The fact is, that the white colour has been generally decomposed, and nothing remains but the ground upon which it was laid. After a vase has been discovered in an antient sepulchre, the white colour is so fugitive that it is sometimes carried off by the mere process of washing the vessel in common water, and it never resists the acids which are used for that purpose. The persons who deal in these antiquities, at Naples and in other parts of Italy, very commonly retouch and restore their vases, adding a little white paint where the white colour has disappeared. The monochromatic paintings of the Antients sometimes consisted of white colour upon a red or black ground: this style of painting was expressed by the word Asuroyea QEin2. The most beautiful of the monochromatic paintings are those which were executed upon earthen vases when the Arts were considerably advanced:

CHAP. V.

^{(2) (}Aristot. Poet. c. 6. See also Winkelmann Hist. de l'Art, tom. II. p. 144. Paris, An 2.) Sometimes a red colour was singly applied upon a white ground; in which style of painting four pictures were found in Herculaneum: and, lastly, there were monochromatic paintings with a black colour upon a red ground; as upon the terracotta vases.

these exhibit red figures upon a black ground; CHAP. the beautiful red colour being due solely to the fine quality of the clay: the effect was afterwards heightened by the addition of an outline, at first rudely scratched with the point of a sharp instrument, but in the best ages of the Arts carefully delineated; and often tinted with other colours, in so masterly a style, that it has been said Raphael, under similar circumstances, could not have produced any thing superior, either in beauty or correctness¹. But the vases which are characterized by such perfection of the art, rarely exhibit paintings of equal interest with those fabricated at an earlier æra. The designs upon the latter generally serve to record historical events; or they represent the employments of man in the earliest ages; either when engaged in destroying the ferocious animals which infested his native woods, or in procuring by the chase the means of his subsistence². The representations upon the former

> (1) See the observations of D'Hancarville, Italinski, Sir W. Hamilton, &c. &c.

(2) Monochromatic paintings upon ivory have been found where it might be least expected that any thing resembling the arts of Etruria or of Greece would be discovered; namely, among the Alcoutan Isles, between North America and Kamschatka. The author had

relate only to the ceremonies of the bath and of CHAP. the toilet; or to the dances, and the games, as they were celebrated at the Grecian festivals. The subject of Grecian painting has insensibly led to that of the terra-cotta vases, because these have preserved for us the most genuine specimens of the art as it existed in the remotest periods of its history; and we now see that the method employed by the earliest Grecian artists in their monochromatic painting is still used by Athenian workmen in the manufacture of their idol pictures. The silver shrines with which such pictures are covered, especially in Russia, having holes cut in them to shew the faces and hands of their Saints and Virgins, exhibit exactly the sort of superficies used upon these occasions for laying on the parts of the painting; and it is very probable that the Russian painters, who manufacture these images for sale, received from the Greeks, with their religion, this method of preparing them. A curious piece of chicanery is practised by the Russian dealers in this species of holy craft. The silver shrine is supposed to

had in his possession an ivory bow, brought thence by Commodore Billings : on which the natives were represented as engaged in fishing, &c.: the figures, delineated in a black colour, perfectly resembled the paintings on the oldest terra-cotta vases.

serve as a mere case to inclose the sacred picture; CHAP. V. leaving only the small apertures before mentioned, for their Boghs, or Gods, to peep through: but as the part beneath the silver superficies is not seen, they spare themselves the trouble of painting any thing except the face and hands of the image; so that if the covering, by any accident, fall off, the bare wood is disclosed, instead of the rest of the picture. But to return to the art of painting among the Antient Greeks: If we except the pictures found in Herculaneum, Pompeii, and Stabia, and the few faint vestiges upon marble statues, we may despair of seeing anything so perfect as the specimens which are preserved upon terra cotta; whether upon facings intended for architecture ¹, or upon vases found in Grecian sepulchres. It is evident that these Origin of Painting pictures are purely Grecian, because Greek and Pottery among the inscriptions so often accompany them; but it Grecks. seems equally evident that the Greeks were indebted for the art to the Etruscans. The art of making earthenware was transported from Etruria into Greece. The Romans also borrowed this invention from the Etruscans; to whom

> (1) Painted terra cotta was sometimes used in Grecian buildings, for the frieze and other ornaments: of this an example will be given in a subsequent description of Ruins in Epidauria.

Greece was indebted for many of its ceremonies and religious institutions², and for its mechanics and artificers³. According to Heraclides Ponticus, the inhabitants of Etruria were distinguished in all the Arts and Sciences⁴; and before the foundation of Rome, the art of painting had attained a high degree of perfection in that country; for Pliny mentions pictures at Ardea which were older than the birth of Romulus⁵. This alone is sufficient to shew, that, in the eighth century before the Christian æra, and above an hundred years before the age of Solon, consequently before the Arts obtained any footing in Greece, the same people who taught the Greeks the art of making earthenware were also well acquainted with the art of painting. In addition, it may be urged that the cities of Nola and Capua were founded and built by the Etruscans⁶; and it is remarkable that the vases of Nola are peculiar

CHAP. for elegance of design and excellence of workv. manship'.

> Among the few articles of Athenian cutlery to be met with in the market, we found some small knives and forks, with white bone handles, inscribed with mottoes in modern Greek, characteristic of the manners and sentiments of the people; such, for example, as the following: 'Ρίζα πάντων των κακών εστιν ή φιλαργυρία, "The love of money is the root of all evils." Mndera xura Opovsiv, " You should despise no one." ... For the rest, nothing can be more wretchedly supplied than Athens with the most common articles of use or convenience. The artists employed for the British Ambassador were under the necessity of sending to Smyrna to obtain a wheeled cart for moving the marbles to the Piræeus, and for all the materials and implements wanted in preparing cases to contain them. No ladders could be found, nor any

(1) The author has not seen a Dissertation by the Abbé Lanzi, which is cited in a work published by the Society of Dilettanti (entitled "Specimens of Antient Sculpture," Lond. 1809.) as containing proof that the Etruscans (See the Observations facing Plate 17.) "followed the improvements of the Greeks at a respectful distance, and had no pretensions to that venerable antiquity in the Arts which has been assigned to them."

instruments proper for making them. It was CHAP. not possible to procure the most ordinary domestic utensils, nor a single article of curriery².

Specimens of antient art are less rare. A Medals goldsmith sold to us some beautiful gold medals, of Alexander and of Philip, for double their weight in Venetian sequins. He had several gems of great beauty in his possession, but he estimated them as if he intended to make his fortune by the sale of them. Some of these are perhaps now in England. One of them was a small red and white sardonyx caméo; the subject, Jupiter, in his war with the Giants, hurling the thunder; the god being represented in a

1 : 1 . fe ? - . .

(2) A couple of old Turkish saddles, which had belonged to the late Mr. Tweddell, were first recommended and afterwards sold to us by Spiridion Logotheti, the English Consul, at an enormous price, as his own property : possession in ATHENS, as elsewhere, with regard to Mr. Tweddell's effects, being considered equal to " nine points of the law." He knew very well that our future travels in Greece depended, in a great measure, upon this acquisition, and he took care to profit by the occasion. All subsequent travellers have noticed his rapacity. When Stuart was in Athens, he met with similar treatment from our Consul: and as long as these situations are held by Greeks, Englishmen who visit the country will be liable to their exactions. Hardly a day passed without a demand from this man for money, 'under some pretext or other. This Note is therefore inserted as a caution to the number of our countrymen now visiting Greece; that they may have as little intercourse as possible with Greeks calling themselves English Consuls, or really acting in that capacity.

and Gems.

Symbol of the void Amphora explained.

car, with four horses: the workmanship of this caméo was exceedingly fine'. The author also obtained here, for forty piastres, the fine silver tetradrachm of Lysimachus, exhibiting the portrait of Alexander the Great, which he caused to be engraved for a Dissertation upon the Soros brought from Alexander's Tomb; and he afterwards procured, from an Albanian family, a silver medal of Athens, of equal size, and almost equal beauty. The well-known symbol of the void Amphora, lying horizontally upon the reverses of Athenian medals, has never received any satisfactory illustration. It is accompanied by an owl, and the bird is represented sitting upon the vessel. The mythological principle implied by the one may therefore be supposed to have an allusion also in the other; and that this is true, and that the principle so expressed was passive as to its nature, may be clearly shewn by reference to a few facts. The owl was the symbol of Pallas, because it denoted the privation or the absence of light; and the author has

(1) The same subject is represented, but with the addition of the Giants and their serpent legs, precisely after the same manner, by the fine antique engraved in the *Paris* edition of *Winkelmann's* Works. *Voy. Œuvres completes de Winkelmann, tom.* II. *lib.* iv. c. 8. p. 115. *Paris, Aa* 2.

CHAP.

V.

proved, upon a former occasion^e, that Pallas, or CHAP. the whole body of female Divinities whom this Goddess was supposed to personify, or Night, or Silence, or Death, or any other sign of privation, was but a type of the passive principle: consequently, the void amphora, or the Gorgonian head (which Pallas bore upon her ægis, and which also often appears with the amphora upon the medals of Athens), or the owl, or the mythological principle denoted by any one of these, was an allusion to the sleep of Nature, and must have been considered as the memento mori of the Pagan world. For a decisive proof of this, it may be urged, that the form of the amphora itself was sometimes given to the Stélé, as a sepulchral monument³. A tomb was opened in the South of Russia, containing on either side of it a void amphora leaning against the Soros'. Sometimes the Antients represented a winged Sphinx as sitting upon an empty amphora'; and

(2) See "Greek Marbles," p. 30. also Append. p. 72.

(3) A marble amphora of this description is in the Collection of Greek Murbles at Cambridge : it was found upon the shore of the Propontis; and presented by Spencer Smith, Esq. late Minister Plenipotentiary at the Olloman Porte, brother of Sir Sidney Smith.

(4) The place is called Ovidiopol by the Russians. There is an engraved representation of the interior of the tomb in Pallas's Travels through the South of Russia, vol. II. p. 244.

the Sphinx, as it is well known, is one of the CHAP. sepulchral monuments in the great coemetery of Memphis. The same vessel was made an accompaniment of Charon and Hermes when conducting Psyche, or the Soul, to Hades, as this subject is represented upon the gems of Greece¹.

and a support of the state of the second state of the

Proceeding through the inhabited part of the city, towards the north-west, a little beyond the Corinthian structure to which we have so lately alluded, we came to an extensive Ruin, encumbered with modern buildings; which Stuart, from the imperfect survey he was able to make of it, considered as the GYMNASIUM OF Pro-LEMY⁸. Its vicinity to the Temple of Theseus renders this highly probable. Stuart indeed speaks of its plan; but he has not given it. Concealed as it is by dwellings, and greatly dilapidated, we have not even attempted to supply what that able architect and inquisitive traveller did not feel himself authorised, from the state of the Ruin, to communicate,

Piolemanm.

As we passed through the town, there was hardly a house that had not some little marble fragment of antient sculpture stuck in its front, Antient Marbles. over the door; and since most of the houses have court-yards, where the objects within are concealed from the observation of passengers in the streets, many valuable antiquities will be brought to light as Athens becomes more visited. The few articles which we collected, during our residence here, may be considered as promising indications of future acquisitions of the same nature. In the yard belonging to the house where we resided, there were two Bas-reliefs; and although the workmanship in each of them is not characterized by the masterly style and execution which distinguishes the sculpture in the Acropolis, yet it is easy to perceive that they have been touched by the hand of an Athenian artist. They were both given to us by our hostess, the first day after our arrival; and they are now in the University Library at Cambridge. One of them represents the initiation of Hercules by a priestess of Ceres'; and it

 285°

CHAP. V.

⁽³⁾ This ceremony is said to have taken place, not at Eleusis, but at the Temple of Ceres in Agra, where the lesser mysteries were celehrated. Vid. Stephan. in lib. Meursii de Populis Attica, up. Gronov. Thes. Grac. Antiq. vol. IV. p. 683. Lug. Bat. 1699.

is singular that the figure of Hercules is draped. CHAP. The other exhibits a female figure, seated, to whom a male is presenting a new-born infant. The Grecians were accustomed to consign their newly-born children to the tutelar care of some Deity, upon the fifth day after their birth : upon this occasion they went in white robes, with their feet bare. But the figure in this bas-relief carrying the child may allude to a circumstance which occurred in the life of Caligula, who placed his infant daughter, Livia Drusilla, in the lap of the protecting Minerva. The sculpture is remarkable for the ease and freedom which it displays. It is a very uncommon circumstance to have these things pointed out by a Turk: but we had this good luck; for passing the door of a Turkish house, its owner hailed us with the usual appellation, --- " Djowrs! here is some rubbish suited to your taste: take it off my premises !" He had found in his garden, among some old foundations, the half of a marble basrelief, which represented the annual procession of the Athenian citizens, with their youth, to the ceremony of initiation at Eleusis; and for a trifle he allowed us to remove it, seeming to be quite happy in getting rid of a stone on which human figures were delineated. We saw also, in one of the streets, an antient marble Stélé,

lying horizontally, and serving as a horse-block. CHAP. When we drew near to examine it, we discovered that it had been placed upon the TOMB OF EUCLID OF HERMIONE, whom we found to be represented upon the upper part of the pillar, standing beneath an arch, in a philosopher's habit, and with a scroll in his hand. Beneath this figure, near to the base of the pillar, and upon the part of the stone which must have been buried when the Stélé was erected, we observed the usual animal symbol of Anubis, the infernal Mercury, in the form of A DOG, rudely sketched upon the surface; and over the arched recess, containing the figure of the philosopher, we read, in very legible characters, this Inscription, in the Doric dialect, remarkable for the variation in the genitive case:

ΕΥΚΛΙΔΑΣ ΕΥΚΛΙΔΟΥ ΕΡΜΙΟΝΕΥΣ

" EUCLID SON OF EUCLID OF HERMIONE."

Of two celebrated philosophers who bore this name, the disciple of *Socrates*, as the first, was a native of *Megara*; and the mathematician, as the second, flourished at *Alexandria*. The manner of the writing, the style of the sculpture, and the form of the arch, might induce an

opinion that this Stélé was not of antient CHAP. date sufficient for either of their sepulchres; yet it may be observed that Spon' has given, from a medal struck at Megara, a portrait of EUCLID the Wrangler, with his name on one side, and that of Hadrian on the other; and Bellori has published a different coin (MEFAPE ΩN) with the head of EUCLID, as Aulus Gellius' describes it, "rich velatus," with which the figure on the Stélé agrees. Both representations may therefore have been intended to represent the same individual; and what further confirms this is, that whilst the reverse of the medal exhibits the figure of Diana, bearing in either hand a torch, as the symbol of the lower regions and of night, so the dog on the Stélé, the animal figure of Anubis, is also that of Sirius at its heliacal setting : a significant and appropriate emblem of the philosopher descending into the infernal shades. These marbles, together with our other subsequent acquisitions in bas-reliefs and fragments found in Athens, amounting to fourteen pieces from this city alone, are now in the University Library at Cambridge: and as the author's account of them is already before the public, it

(1) Miscell. Erud. Antiq. sec. iv. (7) Lib. vi. c. 10.

will be unnecessary in this place to notice the CHAP. rest³.

We accompanied Signor Lusieri to the THE- Theséum. SEUM; and having obtained admission to the interior of the temple, paid a melancholy visit to the grave of that accomplished scholar Grave of whose name we had found inscribed upon the pillars of Sunium; the exemplary and lamented Tweddell⁴. It was simply a small oblong

TweddelL.

(3) See "Greek Marbles," Nos. x. xi. xii. xv. xvii. xviii. xxii. XXVII. XXX. XXXIII. XXXV. XXXVI. XXXVII. Cambridge, 1809.

(4) JOHN TWEDDELL, the eldest son of Francis Tweddell, Esq. of Threepwood in the County of Northumberland, 'was born on the 1st of June, 1769; and after passing through the usual course of preparatory education, was entered at Trinity College, Cambridge, where he distinguished bimself by such proofs of original genius as are, perhaps, without example, even in the records of that learned Society. As a caudidate for University honours, his "Prolusiones Academica" attest his success to have been equally brilliant and extraordinary, and supersede the necessity of particular illustration. Mr. Tweddell was elected a Fellow of Trinity College in 1792, and soon afterwards entered himself a Student of Lincoln's Inn, where he kept his terms, and continued to reside until the year 1795, when he left England to commence his travels on the continent of Europe-and met with that untimely fate which has mixed his ashes with those of the sages and philosophers of Greece. He visited Switzerland, Germany, most parts of the Russian Empire, and particularly the Crimea; where his intercourse with Professor Pullus was of the most intimate kind, and had. so endeared him to that amiable scholar, that the admiration with which he spoke of him partook of the tenderness and affection of a father. From the borders of the Euxine, where his researches were both diligent and productive, he proceeded to Constantinople; and

VOL. VI.

after

CHAP. heap of earth, like those over the common graves in all our English church-yards, without stone or inscription of any kind. The body, too, had been carelessly interred : we were told that it did not lie more than three or four feet beneath the surface. The part of the temple where it has been buried is now converted into a Greek church, dedicated to St. George; but as it is left open during particular times of the year, and is always liable to be entered by foraging animals who creep into such retreats, we thought it probable that the body would be disturbed unless further precaution were used; and at any rate it was proper that some stone should be laid upon the spot. Having therefore obtained permission to take up the coffin, and

> after spending some part of the summer of 1798 under the hospitable, roof of Spencer Smith, Esq. the English Minister, he took his departure for the Grecian Islands; and having traversed the provinces of Macedonia and Thessaly, arrived at Athens; where, after a residence of several months, he reached the period of all his learned labours, on the 25th of July, 1799.

> Mr. Tweddell, independent of the advantages which his own merit secured for him in the countries which he visited, possessed recommendations and facilities of a superior kind for conducting his learned pursuits; and his industry keeping pace with his talents and opportunities, his Collections and Manuscripts are known to have been extensive and singularly valuable. Perhaps no traveller of modern times has enjoyed in an equal degree the means of investigating the Antiquities of Greece.

V.

Lusieri promising to superintend the work, we endeavoured to provide a proper covering for the grave; promising to send an inscription worthy of the name it was destined to commemorate. Large blocks of *Pentelican* marble from the *Parthenon*, which had been sawed from the *bas*reliefs intended for our Ambassador, were then lying in the Acropolis ready for the purpose: we therefore begged for one of these; and before we left Athens, every thing had been settled, and seemed likely to proceed according to our wishes '.

This beautiful Doric temple, more resembling,

(1) A curious sort of contest has, however, since impeded the work. Other English travellers arrived in Athens; and a dispute arose, fomented by the feuds and jealousies of rival artists and opposite parties in politics, both as to the nature of the inscription, and the persons who should be allowed to accomplish the work. At length, it is said, that, owing to the exertions of Lord Byron, and another most enterprising traveller, John Fiott Lee, LL.D. of St. John's College, Cambridge, the stone has been laid; and the following beautiful Epitaph, composed by Mr. Walpole in 1805, has been inscribed thereon.

> Εύδιις Ιν φειμίνοισι μάτην Σοφίης ποτ' ἰδρίψας "Ανθεα, καί σε νίον Μοῦσ' ἰφίλησε μάτην. 'Αλλὰ μόνον τοι σῶμα τὸ γήϊνου ἀμφικαλύπτει Τύμβος' τὴν ψυχὴν οἔφανος αἰπὺς ἶχει. 'Ήμῖν θ' οἴ σε φίλοι, φίλον ὡς, κατὰ δάκευ χίοντες, Μυῆμα φιλοφροσύνης, χλωρὸν, ὅδυρόμεθα, 'Ἡδὺ γ' ὅμως καὶ τερπνὸν ἵχειν τοῦτ' ἰστιν, 'ΛΘΗΝΑΙΣ ¨Ως συ, Βρίταννος ἴων, κείσται ἰν σποδίη.

CHAP. V.

V. Description of the Temple.

CHAP.

in the style of its architecture, the temples of Pæstum than that of Minerva in the Acropolis, and the most entire of any of the remaining structures of Antient Greece, were it not for the damage which the sculptures have sustained, may be considered as still perfect. The ruined state of the metopes and frieze has proved indeed a very fortunate circumstance; for it was owing solely to this that the building escaped the ravages which were going on in the Parthenon. Lusieri told us there was nothing but what was considered as too much mutilated to answer the expense and difficulty of taking it down¹. The entire edifice is of *Pentelican* marble : it stands east and west, the principal front facing the east ; and it is that kind of building which was called, by antient architects, as it is expressed in the

(1) Accordingly we read,—" As the walls and columns of this monument are in their original position, no part of the sculpture has been displaced, nor the minutest fragment of any kind separated from the building." (Memorandum, p. 18. Lond. 1811.) There is nothing said here of the "impending ruin" (Ibid. p. 8.) to which the remaining sculpture is exposed; nothing of "the zeal of the early Christians" (p. 11.) and "the harbarism of the Turks:" but we are told that "the temple itself (p. 19.) is very inferior in decorative sculpture to the Parthenon;" and this remark, made with great naïveté, most happily explains the hair-breadth escape of the building from the illjudged rapacity which has tended to the ruin of the noblest monuments of Greece.

language of Vitruvius, and explained by Stuart^{*}, CHAP. a Peripteros; that is to say, it has a portico of six columns in each front, and on each side a range of eleven columns, exclusive of the columns on the angles. All these columns remain in their original position, excepting twothat separated the portico from the pronaos, which have been demolished. Every circumstance respecting them has already been often detailed. Like all pillars raised according to the most antient Doric style of building, they are without bases or pedestals; standing, with inexpressible dignity and simplicity', upon the pavement of the covered walk around the cell of the temple. Some of the metopes represent the labours of Hercules; others, the exploits of Theseus; and there are some which were never adorned with any sculpture. Above the antæ of the pronaos is a sculptured frieze, the subject of

(2) See Stuart's Athens, vol. III. p. 5. Lond. 1794.

(3) "The awful dignity and graudeur in this kind of temple, arising. from the perfect agreement of its parts, strikes the beholder with a sensation which he may look for in vain in buildings of any other description. There is a certain appearance of eternal duration in this species of edifice, that gives a solemn and majestic feeling, while every part is perceived to contribute its share to this character of durability. These considerations will convince us that no material change can be made in the proportions of the genuine Doric, without destroying its peculiar character." See Reveley's Pref. to vol. 111. of Stuart's Athens, p. 14. Lond. 1794.

v.

CHAP. V.

which cannot now be determined; and the battle of the Centaurs and Lapithæ is represented upon a similar frieze of the posticus. In the tympanum of the pediment, over the eastern front, Stuart observed several holes in the marble; where metal cramps had been fixed for sustaining sculpture in entire relief, as over the eastern entrance to the Parthenon¹. The action of the atmosphere, in this fine climate, upon the marble, has diffused over the whole edifice, as over all the buildings in the Acropolis, a warm ochreous tint, which is peculiar to the ruins of Athens: it bears no resemblance to that black and dingy hue which is acquired by all works in stone and marble when they have been exposed to the open air in the more northern. countries of Europe, and especially in England. Perhaps to this warm colour, so remarkably characterizing the remains of antient buildings at ATHENS. Plutarch alluded, in that beautiful passage^{*} cited by *Chandler*^{*}, when he affirmed,

(1) See Stuart's Athens, vol. III. p. 2. Lond. 1794.

(2) "Οδιν και μαλλον θαυμάζεται τὰ Περικλίους ἔργα πρός πολύν χρόνου ἐν ολίγω γενόμενα. κάλλει μέν γὰρ ἶκαστον εύθος ñν τότε άρχαῖον, ἀκμιῆ δὲ μέχρι ῦν πρόσφατόν ἐστι και νεουργόν οὕτως ἐπανδεῖ τις καινότης ἀεὶ ἄδικτον ὑπό τοῦ χρόνου διατηροῦσα τὴν ὄψιν, ΩΣΠΕΡ ΑΕΙΘΑΛΕΣ ΠΝΕΤΜΑ ΚΑΙ ΨΤΧΗΝ ΑΓΗΡΩ ΚΑΤΑΜΕΜΙΓΜΕΝΗΝ ΤΩΝ ΕΡΓΩΝ ΕΧΟΝΤΩΝ. mentioned by Plutarch, both in his Life of Cimon, CHAP. and of Theseus; when, after the conquest of Scyros, the son of Milliades arrived in Athens, bearing the mouldering bones and weapons he had so marvellously discovered. They were received by the Athenians, says Plutarch', as if Theseus himself had returned among them. The solemnity of their interment took place in the very midst of the city, near to the Gymnasium⁴; accompanied by every splendid pomp and costly sacrifice with which the Athenians, of all people, were the most ready to appease the manes of a departed hero. This event happened during the Archonship of Apsephion; so that the THESEUM has now braved the attacks of time. of earthquakes, and of barbarians, during a lapse of considerably above two thousand years'; and its relative position with regard to the Gymnasium renders it an important point of

(5) The arrival of *Cimon* with the bones of *Theseus* happened in the same year as the birth of *Socrates*: that is to say, in the fourth year of the 77th *Olympiad*, 469 years before *Christ*, according to *Corsini*. Eschylus and Sophocles then disputed the prize of Tragedy, which was adjudged to Sophocles. (*Vid. Chronicon ex Marmoribus Arundelianis, Epoch.* 57.) If we allow, therefore, ten years for the building of the temple, (and five has been considered a sufficient number,) this edifice has stood nearly twenty-three centuries.

CHAP. observation, whence the situation of many v. other buildings of the antient city may be ascertained.

> Leaving the Theséum, we again visited the Areopagus; and we detached from the rock some specimens of the remarkable aggregate whereof this eminence consists. All the lower part of it, as before mentioned, consists of breccia; but we found here a sparry carbonate of lime, of a honey colour, exhibiting, by fracture, imperfect prisms ranged parallel to each other. From the Areopagus we proceeded to a little chapel, situate upon the spot where the antient PIRÆEAN GATE of the city formerly stood: near to this, as Pausanias relates¹, there was a tomb with an equestrian statue by Praxiteles. The place where the gate was situate may still be discerned; and also a part of the northern limb of the "long legs," wangà $\sigma \varkappa \epsilon \lambda \eta$, extending from the city to the sea. We then ascended towards the north of the Piræean Gate^{*}, where may still be seen, in a state of the most admirable preservation, the ground-plot

Piræcan Gale.

and entire form of the PNYX, or antient place of Parliament of the Athenians; as it was appropriated by Solon to the assemblies of the citizens³. This structure is not likely to be much affected by the lapse of entire centuries : almost the whole of it, even to the *pulpitum* for the orators, which yet remains, is an excavation of the rock; and the several parts of it were carved in stone, of one solid mass, with the exception only of the semicircular area, the farthest part of which from the *pulpitum* consists of masonry⁴. In the perpendicular surface of

(4) That this place was really the Pnyx, is now universally the opinion of travellers who have visited Athens. It had been called AREOPAGUS, and ODEUM. Chandler was the first by whom it was accurately described. The altar and stone pulpit, which he mentions, agree with its furniture as upon record. Chandler says these have been removed; but the pulpit, if not the altar, certainly remains. A more attentive examination of the antiquities of Athens, if it effect no change as to the name now given to this place, will very probably alter the appellations too hastily bestowed upon some of the others. Perhaps the Pnyx may be considered as better ascertained than almost any remaining structure destitute of an inscription whereby it may be identified; and for this, the literary world is mainly indebted to the Earl of Aberdeen, who carried on a very extensive examination of the spot, sparing no expense during an excavation which he made here, to have this point determined. The dona votiva which he discovered are very remarkable. (See the Extract from Mr. Walpole's Journal, p. 199 of this Vol.) But the site of the Odéum of Pericles is entirely unknown. It must have stood at the termination of the street of the Tripods. The situation of the Prytaneum remains also to be determined:

299

the rock, facing this area, are niches for the CHAP. votive tablets; the characteristic and most genuine marks of places held in any peculiar degree of consideration throughout the whole of Antient Greece, and in every country where her colonies extended. To approach the spot once dignified by the presence of the greatest Grecian orators; to set our feet where they stood; and actually to behold the place where Demosthenes addressed the "Men of Athens," calling to mind the most memorable examples of his eloquence; is a gratification of an exalted But the feelings excited in viewing the nature. Pnyx peculiarly affect the hearts of Englishmen: that holy fire, so much dreaded by the Athenian tyrants, and which this place had such a remarkable tendency to agitate, burns yet in Britain : it is the very soul of her liberties; and it strengthens the security of her laws; giving eloquence to her Senate, heroism to her arms, extension to her commerce, and freedom to her

> determined; and it cannot be said that our evidence for identifying the three great buildings, the Temple of Jupiter Olympius, the Theatre of Regilla, and the Theatre of Bacchus, with the remains which severally bear either of these appellations, is altogether satisfactory. There is much to be done by future travellers ; and the excavations which they may make, by bringing to light many valuable documents, will greatly tend to illustrate the topography of the city.

people: although annihilated in almost every country of the earth, it lives in England; and its extinction there, like the going-out of the sacred flame in the Temple of Delphi, would be felt as a general calamity. The circumstances connected with the history of the Pnyx prove how difficult a thing it was to subdue the love of freedom among the Antient Grecians. The Athenian tyrants vainly imagined that it originated solely in the position of the $\beta \tilde{\eta} \mu \alpha$, or stone pulpit, whence the orators harangued the people; forgetting that it is a natural principle implanted by Providence in the human heart. Under the notion they had thus conceived, they altered the plan of the Pnyx: the Binua had been fronted towards the sea; they fronted it towards the land; believing that a people diverted from allusions to maritime affairs towards those of agricultural labour would be more easy under an oligarchical dominion¹. The project was not attended with the consequences that were expected; the same spirit yet prevailed: but this place was still

CHAP. V. Antient Walls.

Theatrc and Cave

of Bacchus.

Monument of Thra-

syllus.

Descending from the MUSEUM, we observed some remains of the ANTIENT WALLS of the city upon its southern side, and of the entrance from Phalerum¹. The vestiges of these walls also appear extending towards the Monument of Philopappus, which they inclosed: thence they bore off towards the Piræean Gate, in a line of direction almost due north and south?. Afterwards, crossing the plain, we visited the THEATRE and CAVE OF BACCHUS: and some substructions were shewn to us by Signor Lusieri, which he conceived to be the foundations of a temple dedicated also to the same Deity. Nothing exists now of the Theatre, excepting the coilon for the seats, as in the earliest ages of dramatic representation it was universally formed, by scooping the sloping side of a rock'. But how majestic, and how perfect in its preservation, rises the Choragic Monument of Thrasyllus above this theatre !! and how sublime the whole groupe of objects with which it was

(1) See the Plan, Vignette to the preceding Chapter.

(2) Ibid. No. 19.

(4) Ibid. No. 14. The best representation of it is in *Le Roy* ("*Ruines de la Grèce*," *Pl.* 8. *Paris*, 1758); now the more valuable, as the monument, in its present mutilated state, no longer exhibits the appearance it then presented.

associated at the time of our visit, and before the work of dilapidation had commencedthe antient sun-dial; the statue of the God; the pillars for the tripods'; the majestic Citadel! The last of these has indeed defied the desolating ravages of Barbaric power; but who shall again behold the other objects in this affecting scene as they then appeared? or in what distant country, and obscure retreat, may we look for their mutilated fragments? Often as these monuments had been described, we observed some things which perhaps have not been before noticed. This part of the rock of the Acropolis consists of a hard red breccia, similar to that which was observed at the Areopagus. Towards the left of the MONUMENT OF THRASYLLUS the surface of the stone has been planed perpendicularly; and here, beneath the two CHORAGIC PILLARS, we saw, upon the rock, an Inscription, Remarkaalluded to, but not copied, by Stuart, and bleInscripmentioned by no other writer. It extends in two parts, which may have belonged to two separate legends, one above the other; but the characters are alike in both, and they are deeply

CHAP. V. engraven in the stone, after the manner of those Inscriptions which we discovered at Jerusalem, over the doors of the tombs in Mount Sion¹. The only letters sufficiently perfect to be legible are the following; but the termination of the upper line could not be ascertained, and this line was remarkably separated from the lower part of the inscription by a natural or artificial linear cavity in the stone:

ΑΠΕΙΣΨΝΙΑΝΟΣΔΑΙ... ΤΡΙΠΟΕΑΝΕΘΕΓΑΝ

In its very imperfect state, it must be left to the conjectures of the learned. The importance of its situation, and the circumstance of its never having been published before, certainly entitles it to the Reader's notice. As to its interpretation, it evidently refers to the erection of *tripods*: this appears both from the words of the *inscription*, and from its contiguity to the *Choragic Pillars*. The name *Pisonianus* seems to occur before $\Delta \alpha i$; and these letters may

(2) Τείπος is found in Hesychius. The use of the verb ἀνίθισαν occurs thus in Lucian: "Υλας ἀσιτίμοντο, καὶ ὅς ἀνίθισαν, καὶ ὅςνια καθιόςωσαν, καὶ «ὰ φυτὰ ἰπιφήμισαν ἰκάστο θιῷ. Montes dedicárunt, vel consecrárunt, unicuique Deo.

⁽¹⁾ See Vol. IV. of the Octavo Edition of these Travels, p. 336, &c.

have reference to the word $\Delta \alpha i \mu \omega v$, in one of its CHAP. Bacchus bears the title of Dæmon cases. throughout the Bacchæ of Euripides³. With regard to the Crypt which is behind the Monument of Thrasyllus, by some called the Cave of Origin of the Crypt. Bacchus, and now a Greek chapel bearing the appellation of Panagia Spiliotissa, or the Blessed Lady of the Grotto, it is decidedly mentioned by Pausanias; and his allusion to it, added to the description which he gives of its situation, serves to identify the THEATRE. He says it contained a tripod, with the figures of Apollo and Diana, represented as destroying the children of Niobe*. But its more antient history may possibly refer to an earlier period than that of the CHORAGIC GAMES of the Athenians, and to customs which existed in Attica long before the institution of the Dionysia. That it ought not to have been considered as necessarily associated with the structure now placed before it,

Ice Plant.

seems to be evident from the circumstance of - the entrance being closed when the building was added. In the inscription upon the middle of the architrave and immediately over the central pilaster of the monument, no mention is made of the grotto: the legend appears to refer only to the structure whereon it is inscribed! From this it may be conjectured, that the cave was one of the most antient sepulchral cryptæ of the first settlers upon this rock: there are many other of a similar nature, fronting the Phalerum in the approach to ATHENS, and in the Hill of Musæus. It is precisely in the situation where such caves were often constructed for sepulchral purposes, by the earliest Grecian colonies, and by the inhabitants of all the eastern shores of the Mediterranean; that is to say, upon the outside and beneath the walls of the Acropolis; being hollowed in the rocks upon which their citadels were erected. Instances of this custom have been mentioned more than once, in the former parts of this work². Here we were gratified by finding the Ice-plant (Mesembryanthemum crystallinum LINN.) sprouting luxuriantly, in its wild and native state,

(1) See Chandler's Trav. in Greece, p. 63. Oxf. 1776.

among the ruins: it was now in seed's; and we CHAP. collected the capsules to send to England'. This was the only spot in all Greece where we remarked this plant. The observations of former travellers prove it to be an Athenian plant'; yet it had been transported to England, and was cultivated there so early as the beginning of the last century'.

On the following day we set out to visit those prodigious columns, which, owing to their magnitude and situation, are almost everywhere in view, bearing traditionally the name of Hadrian's Pillars. In our way thither, we passed beneath an arch which conducted from the old city of $\frac{Arch of}{Hadrian}$ Theseus to the New Athens built by Hadrian; upon which the several appellations of Porta Hadriana, Arch of Theseus, and Arch of Ægeus, have been bestowed⁷. Its situation with respect.

(3) October 30.

(4) We collected many rare plants in the neighbourhood of *Athens*: but the specimens were destroyed in their passage home, by the wreck of the *Princessa* merchantman, off *Beachy Head*.

(5) It was found near to Athens, by John Sibthorpe, M.D. Professor of Botany at Oxford.

(6) In 1727, according to Bradley. See Martin's edit. of Miller's Dict. Lond. 1807.

to the walls of the antient city, and the obliquity CHAP. v. of its position with regard to the peribolus which inclosed the plane of Hadrian's Pillars, seems to authorise an objection, already urged', against the notion of its having been originally a gate. Le Roy's view of it^e is much finer, as to general effect, than that which Stuart has given', and exhibits more of the grandeur of the original. The stones are put together without cement; but the work is adorned with a row of Corinthian pilasters and columns, with bases supporting an upper tier in the same style of architecture, thereby denoting a mode of building more characteristic of the age of Hadrian than of any earlier period in Athenian history. In the endeavours which have been made to trace its Its Origin. origin, and to ascertain its antiquity, it is somewhat strange that no one has stated, what the first view of it seems to suggest as the most probable opinion concerning this structure; namely, that it was a triumphal arch, erected in honour of Hadrian, upon his coming to ATHENS. Stuart has observed⁴, that "it appears evidently

⁽¹⁾ Stuart's Antiq. of Athens, as above cited.

⁽²⁾ Les Ruines des plus beaux Monumens de la Grèce, Pl. 21. Paris, 1757.

⁽⁴⁾ Ibid. p. 20,

not to have been connected with, or to have made a part of, any other building, but to have been originally intended to remain insulated." He also considers the inscriptions upon the two sides of it "as a complimentary effusion of gratitude to a liberal benefactor;" and yet he has been induced, by the forced construction of a passage in Plutarch, to believe this building to be the Arch of Ægeus, rebuilt by the Roman Emperor. If this had been the case, and if Hadrian, as he supposes, had really restored a venerable fabric owing to any regard for the consideration in which its original founder was held, he would not surely have opposed his own fame to that of Theseus, as we find it to be vaunted in the two inscriptions upon the It seems more reasonable to suppose arch⁵. that these inscriptions were placed by the Athenians upon a triumphal arch erected in honour of Hadrian, as adulatory testimonies of their regard for a patron to whose munificence their city was so much indebted, and as the

highest compliment they could bestow. CHAP. That Hadrian coveted the thanks and praises of dependent states; that he sought to be so rewarded for the favours he conferred upon them; seems to be evident, from one of his epistles alluding to the acknowledgments made, by the people of Alexandria for his bounty to their city, and already cited in a former part of this work'. The form and style of the structure also agrees with this opinion of its origin; for it resembles the usual form of the triumphal arches raised in honour of the Roman Emperors?. It is built entirely of Pentelican marble; nor was this magnificence inconsistent with the materials commonly used in constructing triumphal arches. The arches of Romulus, it is true, were of brick; and that of Camillus was of plain square stone; but those of Cæsar, Drusus, Titus, Trajan, and

(1) See Vol. V. Chap. VII. p. 358.

(2) The first specimen of Greeian architecture erected in Great Britain was modelled from this arch; and the remains of the copy, although offering a paltry imitation, and upon an insignificant scale, may still be seen in the University of Cambridge. It is the southern front of the gate of Caius College, facing the Senate House and Public Library; erected in 1557, by John Caius, M.D. after designs by John of Padua. And as this formerly served to support a Dial, before the erection of the Senate House prevented any further observation of the shadow of the Gnomon, it is probable the Athenian arch had the same use; the position of which proves decidedly that it was not one of the Gates of the Peribolus of the Temple of Jupiter Olympius.

Gordian, were, like this of Hadrian, entirely of CHAP. marble. In addition, it may be urged, that trophies of this kind were unknown in Greece before the time of the Roman Emperors. The mere circumstance of its form is therefore almost decisive as to its origin; for the practice of erecting arches, as monuments of noble enterprises, and in honour of distinguished personages, was not a Grecian but a Roman custom. Its proper appellation seems therefore to be that which tradition, supported by the evidence of an inscription upon its southeastern side, has long assigned to it; namely, the Arch of HADRIAN: and the occasion of its erection will be found in the remarkable when erected. event of Hadrian's return to Athens for the consecration of the identical temple to which this arch conducted: this happened early in the second century³. Three years only had elapsed since the Emperor entered into the priesthood of the Eleusinian Ceres; an event which was distinguished by the martyrdom of many Athenian Christians, with Publius their bishop*. The Heathens were therefore animated by every emotion of religious zeal, and by every

316

v.

sentiment of gratitude, to receive with all the CHAP. honours of triumph the patron who had restored the temples of their Gods; the champion who had trodden down the enemies of their faith'. If ever, in the history of the world, there was a time when it was peculiarly appropriate that a triumph should be decreed, it was at this period, and upon this occasion. The antient city seemed to revive with more than pristine splendour from its ruins. Ever since the age of Dicarchus, its condition had been described as so wretched, that foreigners, upon the first sight of it, would scarcely believe they beheld what once had been so renowned a city*: but a new Athens had arisen under the auspices of the Emperor. Magnificent temples, stately shrines, unsullied altars, awaited the benediction of the sacerdotal monarch; and it would indeed have been marvellous if the Athenians. naturally prone to adulation, neglected to bestow it upon a benefactor so well disposed

> (1) Upon his return to ATHENS, Hadrian presided as magistrate at the celebration of the Dionysia, and wore the Athenian dress. He also gave to the Athenians the island CEPHALLENIA. Vid. Dio. Cass, in Vit. Hadrian.

for its reception. The triumphal arch was of CHAP. course prepared; and lasting characters, thereon v. inscribed, have proclaimed to succeeding ages that "THE ATHENS OF HADRIAN HAD ECLIPSED THE CITY OF THESEUS."

We now advanced towards the stupendous pillars which also bear the name of that emperor; and a much more difficult task would remain, if we should undertake to develope the circumstances of their history. According to the routine of objects as they were observed by *Pausanias*, on this side of the city, the hundred and twenty pillars of Phrygian marble, erected by Hadrian, were in this situation; that is to say, south-eastward of the Acropolis³. Sixteen columns of white marble, each six feet in diameter, and nearly sixty feet in height, now remain standing; all of the Corinthian order, beautifully fluted, and of the most exquisite workmanship⁴. But, by the appearance of the

(3) Tà di iniquisorara, inardo sinor síones Devyiou Libou. Pausan. Attica,
 p. 43. Lips. 1696.

(4) Such is their extraordinary size, when compared with the relafive proportion of any other architectural pillars to natural objects, that in every representation of them hitherto engraven, where figures of living beings have been introduced by the artist to afford a scale for their dimensions, the design has been frustrated by the reluctance of the

Temple of Jupiter Olympius. plane upon which the columns stand, Wheler was induced to believe that there were originally six rows of pillars, and twenty in each row, which would complete the number mentioned by PAUSANIAS¹. Chandler and Stuart are the first authors who have described the Columns of Hadrian as the remains of the Temple of JUPITER OLYMPIUS². Le Roy considered them as a part of the Pantheon³; a name bestowed occasionally, by different travellers, upon almost every building in Athens, whether in the upper or in the lower city. Theodosius Zygomalas, author of the Letter to Martin Crusius, published in 1583, mentions the Parthenon⁴

the engraver to represent these figures sufficiently diminutive. Unable to conceive the existence of columns of such magnitude that a man of ordinary stature may remain concealed within any of the *canelures*, some addition, as usual, has been made by the engraver to the size of the figures, and the apparent magnitude of the architecture has been thereby diminished.

(1) "Which, therefore, must be that hundred and twenty, PAUSANIAS speaketh of, as built by the Emperor HADRIAN, of Phrygian marble, being whiter than that of Pentelicus." Journey into Greece, Book V. p. 371. Lond. 1682.

(4) This circumstance is alluded to by Spon, (Voyage de Grèce, §c. gom. II. p. 37. à la Haye, 1794.) but it may have originated in an error

CHAP. V. under this last appellation. Guilletiere affirms positively, that the principal mosque in the lower city was the Pantheon⁵, and afterwards Discordant Accounts describes it as superior to that of Rome. A of this recent traveller⁶ applies the name, and with more reason, to an edifice described by Stuart as the Poikile⁷, and by Wheler as the Olympicum⁸. In this imperfect state of our knowledge with regard to the real history of these pillars, as of many other antiquities in Athens, the author would leave the question to be decided by

error of the transcriber of Zugomalas's Letter, or in an error of the press : marden being written for mapfirm - The words are: "To marteen: פוראסאסטאי, זורטעדעי אמדער פורטאסטעלר: אַרעאדעטר געלט אע אער איז פור איז פורטאסטעאר Lyourar ras isropias 'Elliner: zal raura, ras filas. Ipsum Pantheum ; quod est ædificium, aliis omnibus excellentius: in quo extra circumquaque historiæ Græcorum sculptæ sunt, et quidem divinæ." (Vid. Turco-Gracia, lib. vii. p. 430. Basil. 1583.) The author is here evidently describing the Parthenon; and, as he afterwards mentions the horses of Praxiteles, "iran The psychnes rolnes (supra magnam portam)," it is not very probable that he believed the building to be the Pantheon of Hadrian; unless, indeed, he alluded to the horses which were on cach side of the Propylaa.

⁽⁵⁾ Antistates, Callæschros, Antimachides, and Porinus, were the earlier architects employed on this fabric.

it is said, admired in the assembly of the Gods CHAP. for their wisdom and excellence." Some of the columns still support their architraves; one of which, being measured while we were in Athens, was found to equal three feet in width; and, although of one entire piece of marble, it extended, in length, twenty-two feet six inches⁶. Upon the top of the entablature, on the western side of the principal groupe, is shewn the dwelling of a hermit, who fixed his solitary abode upon this eminence, and dedicated his life entirely to the contemplation of the sublime objects by which his mansion was everywhere surrounded. Seventeen of these pillars were standing in 1676: but a few years before Chandler arrived in Athens, one was thrown down, for the purpose of building a new mosque in the market-place. Such instances of dilapidation on the part of the Turks are,

(6) What the feelings of the Athenians must have been upon the restoration of this temple, may, in some degree, be collected from the following observations of Plutarch, and of Dicaarchus, concerning the edifice in its imperfect state. 'Ds yap in rolus rai 'Admalar ro Όλυμπικίου, ούτως ή Πλάτωνος σοφία την Ατλαντικόν έν πολλοίς καλοίς μόνον igyor arealis ioznaev. (Plutarch. extremo Solone.) Dicaarchus seems to have had a foresight of its future splendour. He says: 'Olumion, אָתודנאבא אבי, אמדמאאיציי ל דאסי דאי דאר סואסלסעארנטר טאסאפמאאי אניטעניסי ל עי SEATISTON, EI ETNETEAESOH. Dicaarch. Descript. Grac. ap. Meurs De Athenis Atticis, lib. i. c. 10.

VOL. VI.

fortunately, very rare; and we find that, in this CHAP. instance, the damage done to the remains of the temple was made a pretext for extorting fifteen purses from the Governor of Athens; a tax levied by the Pasha of Negropont, as expressly stated, for the violence committed by the Waiwode in overthrowing the pillar.

Ilissus.

Fountain Callirhoë.

Descending from the area of the temple toward the Illissus, we visited the fountain CALLIRHOE, sometimes called Enneacrunus¹. We observed niches in the rock, for the votive offerings, where there had been a cascade: and hereabouts were; in all probability, the altars of those Muses mentioned by Pausanias, who were called Ilissiades. Afterwards, as we examined the channel of the river, for a considerable extent, we found it to exhibit such evident traces of a powerful current having worn away the solid substance of its rocky bed, that we were convinced it could not formerly have been characterized by the appearance it now exhibits; namely, that of an occasional torrent, sometimes dry throughout the entire year. Chandler says, he visited it several times after snow had fallen on

(1) Vid. Meursii Ceramic. Gemin. c. 14. op. Gronov. Thesaur. Grae, tom. IV. p. 982. L. Bat. 1699.

False Notions entertained of the River.

322

v.

the mountains, and after heavy rain; but that he never found even the surface of the channel to be covered with water: it lodged only in the hollows of the stone, and trickled from one cavity to another². Yet we should reluctantly conclude with that writer, that the Poets who celebrated Ilissus "as a stream laving the fields, cool and lucid," either conceived or conveyed "a false idea of this renowned water-course." Some other cause must be assigned for the disagreement of their descriptions with the real character which the river now bears. The earliest traveller whose work we have cited seems to have found no difficulty in accounting for the loss of the current, but, soon after his arrival at Athens, distinctly states, that the water of the Ilissus had been diverted and divided by an infinite number of rivulets, cut on purpose to supply the fountains in the gardens about the town³. In a former part of his work he seems to insinuate that the current had also been carried off for the use of

(3) "Le pont est soûtenu de trois arches ; et au dessous est le canal où passoit l'Illissus quand il estoit rivière, car aujourd'huy le canal est sec ; l'Illissus a esté diverty, et partagé en une infinité de rigoles, qui s'épanchent de costé et d'autre, pour aller faire des jetsd'eau dans les jardins des environs de la ville." Voyage d'Athènes, par De la Guilletiere, p. 263. Paris, 1675.

CHAP. V.

⁽²⁾ Trav. in Greece, vol. II. p. 79. Oxf. 1776.

CHAP. the mills near to the city'; and those who have visited *Troas* know very well that a channel thus diverted, for a single *Turkish* mill, is sufficient to carry off a torrent of water not less potent than was the stream of the *Ilissus*². In the simple narrative of *De la Guilletiere* we have therefore sufficient evidence to justify a conclusion, although in opposition to *Chandler*, that the antient writers by whom the *Ilissus* is mentioned did not fall "into local absurdities and untruths³."

in their descriptions of that river: neither is there any thing more justly reprehensible in literary matters, than the very common propensity to depreciate the accuracy of Poets and Historians, whenever a difficulty occurs in reconciling their statements with existing appearances⁴.

(1) "Le Didascalos nous dit, que c'estoit la faute des moulins, et que la rivière d'Illissus estoit présentement coupée en tant de canaux, qu'elle ne pouvoit fournir assez d'eau pour bien moudre le bled." Ibid. p. 236.

. (2) See Gell's Topography of Troy, p. 48. Lond. 1804.

(3) See Chandler's Travels in Greece, vol. II. p. 79, Oxf. 1776.

(4) PLATO (in Phæd. tom. III. p. 229.) mentions the pure and limpid waters of the Ilissus; but as, this passage of that author is expressly alluded to by Mr. Walpole, in his MS. Journal, when writing upon the same subject, his observations will now be added, as strongly supporting the opinion already given.—" Neither wood nor water seem to have abounded in Attica. I did not meet a stream of any magnitude (excepting

ATHENS:

From the bed of the river-after visiting that CHAP. part of it where the marble bridge of three arches, mentioned by all writers to the time of Stuart', conducted across the Ilissus to AGRE⁶, the scene of one of Plato's Dialogues 7-we ascended to view the remains of the STADIUM PANATHE- Stadium NAICUM, which was, in fact, a continuation of Panathe-naicum.

(excepting the Cephissus) in any part of it. Dio Chrysostom says, there are not great mountains to be seen, nor are there rivers flowing through the country, where roraped diappierris, Orat. 6. Athens itself was supplied with well-water; hence the number of antient wells we observe cut in the rock about the city near Lycabettus. Pausanias (lib. i.), as well as Plutarch in his Life of Solon, makes mention of them. The exportation of wood and pitch was forbidden by law, as we find from the Scholiast on a passage in the Knights of Aristophanes. What the country afforded was required for the use of the navy. The Lyceum and Cynosarges were, according to Dicearchus, zarádudea, well wooded; because, as places of public resort, they were much attended to; but trees are not now to be found there. It would be as difficult to find the pure and limpid waters of the Ilissus, zalapà zai diapari, which Plato mentions in the Phædrus; there is never any quantity of water in the river-bed. In former times, the channel was full. Besides the passage from Plato, the following allusion of Cratinus to a famous orator supports this opinion :

Ye Gods, what a flow of words is here !

Ilissus is in his throat. "ILioros is The paperys.

and we know that the Pelasgi were accused of way-laying the Athenian women, when they went from the city to draw water from the Ilissus."-Walpole's MS. Journal.

(5) See the View of it in Stuart's Athens. The bridge no longer exists.

CHAP.

the bridge; for the latter was seventy feet wide, and conducted immediately into the arena of the former. It has been usual to say of this most wonderful of all the marvellous works of Herodes Atticus1, that nothing now remains of its former magnificence. To our eyes, every thing necessary to impress the mind with an accurate idea of the object itself, and of its grandeur, and of the prodigious nature of the work, seemed to exist as if it had been in its perfect state. The marble covering of the seats, it is true, no longer appears; but the lines are visible of the different ranges; and perhaps a part of the covering itself might be brought to light by a removal of the soil. The absence of ornament is of little consequence as to the general effect: the decorations of a Stadium, however costly in

(1) It was originally constructed by Lycurgus ; but it was restored by Herodes, whose real name, as given by Spon from an Athenian inscription, was Tiberius Claudius Atticus Herodes. He lavished upon it the most enormons sums, covering it entirely with the white marble of Mount Pentelicus. PAUSANIAS did not expect to be credited, even in the brief description of this work, as thus given: To di, απούσασι μin ούχ δμοίως ίπαγωγδν, θαῦμα δ' ίδοῦσι. σπάδιον ἰστὶ λευκοῦ. λίθου, μίγιθος di αὐτοῦ τῆδε ἄν τις μάλιστα τικμαίροιτο. ἄνωθιν ὄρος ὑπὶρ τὸν Είλισσὸν ἀεχόμινον iκ μηνειδεῦς καθήκει τοῦ ποταμοῦ περός τὴν ὅχθην εἰθύ τι καὶ διπλοῦν τοῦτο ἀγὴρ 'Λθηναῖος 'Heώδης ψαδόμησι, καὶ οἱ τὸ πολὺ τῆς λιθοτομίας τῆς Πιντίλησιν is την οἰκοδομὴν ἀκηλώθη. Pausan. Attica, c. 19. pp. 45, 46. Lips. 1696. their nature, may be easily imagined; and if, CHAP. instead of having ransacked the quarries of s Pentelicus for its garniture, some more precious material had been used, the superficial investment, in so vast a theatre, would not materially have altered its general appearance. The remains of Stadia still exist in different parts of Greece; but this of Athens surpasses, as in the days of its splendour, every other in the world. Its form is so perfect, that the spectator traversing the arena between its sloping sides, toward the Coilon at its south-eastern extremity, almost imagines himself to be transported to the age in which it was prepared for the reception of its innumerable guests: and when seated in the higher part of it, where people from all Attica, ranged by thousands, beheld a still gathering multitude, thronging eagerly toward, the spot; every countenance being animated by the greatness of the solemnity, and every heart beating with the most impatient expectation; how affecting is the scene before him! Nothing is wanted to render it more impressive, but the actual presence of the pomp itself-the noise of the chariots-the prancing and the neighing of the horses-the sounds of the music-the exhibition of the combatants-and the shouts of the people. Even the passages, through which ferocious

animals' were conducted into the arena, and the CHAP. entrances and retreats for those who contested prizes, yet remain almost in their entire state. Nothing has been removed or destroyed, but the parts which were merely ornamental; and these are not missed in the general survey of a structure necessarily simple as to its form, but inexpressibly great and striking in its aspect: and this effect is owing, not solely to its artificial character, but to the grandeur of its appearance as a work of Nature; the very mountains having contributed to the operations of art, in its formation². Such a combination may be often observed in antient theatres of a semicircular form; but there is not, either in Hellas or in Asia Minor, an instance, where the natural lineaments of the country have admitted of a similar adaptation to the appropriate shape of the Grecian Stadium. This splendid memorial of Attic splendour, and of the renown of a private citizen of Athens, became ultimately his funeral

⁽¹⁾ When Hadrian was in Athens, he presided at the Panathenaa, and caused one thousand wild beasts to be hunted in the Stadium, for the diversion of the people. "Athenis mille ferarum venationem in Stadio exhibuit." Spartianus, in ejus Vita, c. 19.

⁽²⁾ There is a very fine view of it, as engraved by Landseer from a drawing by Reveley, in Stuart's Athens, vol. III. c. 7. Pl. 3. Lond. 1794.

monument: and a very curious discovery may be reserved for future travellers in the majestic Sepulchre sepulchre of Herodes himself; who was here of Herodes. interred³, with the highest obsequies and most distinguished honours that a grateful people could possibly bestow upon the tomb of a benefactor, who spared no expense for them while he was living, and every individual of whom participated in his bounty at his death*. A little eastward of the STADIUM are the vestiges of the Temple of Diana Agræa. Having again crossed the Ilissus, we observed, near to its northern bank, some remains which Stuart and others have considered as those of the Lyceum. Hence we proceeded toward the

(S) The funeral of Herodes Atticus must have afforded one of the most affecting solemnities of which History makes mention. He was seventy-six years old when he died : and in the instructions which he left for his interment, he desired to be buried at Marathon, where he was born ; but the Athenians insisted upon possessing his remains, and they caused the youth of their city to bear him to the Stadium Panathenaicum, which he had built; all the people accompanying, and pouring forth lamentations as for a deceased parent. 'Afraion, sai; sar באותומ, למתפניסוג מעמ, תמו גיטקחעסטידנג, לדם אמולנג, צפחדדסט אמדפלג צחפנטרמידנג. (Philostratus in ejus Vita, Sophist. lib.ii. Lips. 1709.) What a subject for the pencil of a Raphael ! Historical painters sometimes complain that every event in antient history has been already handled ; here is one, at least, to which this complaint is not applicable.

(4) He bequeathed to every Athenian a sum nearly equal to three pounds of our money.

CHAP. V. .

CHAP. east, to ascend MOUNT ANCHESMUS, and to enjoy in one panoramic' survey the glorious prospect presented from its summit, of all the antiquities and natural beauties in the Athenian. Plain. At the foot of this mount were the remains of a reservoir, constructed by Hadrian for the purpose of receiving water for his new Hadrian's Reservoir. city, after being conveyed by a most expensive aqueduct, whose broken piers may be traced to the distance of seven miles from the spot, in a north-easterly direction, toward the country between Parnes and Pentelicus. In Stuart's time, part of an arcade of marble remained, consisting of two Jonic columns, with their entablature; and the spring of an arch, containing the fragment of an inscription, which was remarkably restored by Spon's discovery of the entire legend in a manuscript at Zara². It stated, that the work was begun by Hadrian, in

(1) Since the plan has been adopted in *England* of exhibiting the views of celebrated cities by the sort of painting called *Panoroma*, a hope has been excited that *Athens* will one day become the subject of such a picture; and for this purpose it is highly probable that *Mount Anchesmus* will be made the point of observation. At the same time, it is liable to this objection; that the grandeur of effect is always diminished in proportion to the elevation of the spectator. The city makes, perhaps, a more striking appearance in the road from ELEUSIS, immediately after leaving the defile of *Daphne*.

(2) Wheler says at Spalatro. See Spon, Voyage de Dalmatie, &c. tom. 1. p. 51. à la Haye, 1724.

the new Athens, and completed by his son Antoninus Pius³. The whole fabric is now destroyed, so that even the site of the arcade cannot be determined; but the architrave vet remains, with that part of the inscription which was observed here when Wheler and Spon visited the spot: it forms the lintel or top of one of the gates, leading toward its antient situation, in the present wall of the city⁴. We ascended to the commanding eminence of the mount, once occupied by a temple of Anchesmian Mount Jupiter. The Pagan shrine has, as usual, been succeeded by a small Christian sanctuary: it is dedicated to St. George. Of the view from this rock, even Wheler could not write without emotion. "Here," said he 5, " a Democritus might sit and laugh at the pomps and vanities of the world, whose glories so soon vanish; or an Heraclitus weep over its manifold misfortunes, telling sad stories of the various changes and events of Fate." The prospect embraces every

CHAP. object, excepting only those upon the south-west v. side of the Castle. Instead of describing the view from the summit. effect produced in our minds by such a sight, it

will be more consistent with the present undertaking, to note down what the objects really are which the eye commands from this place. It is a plan we propose to adopt again, upon similar occasions, whenever the observations we made upon the spot will enable us so to do. The situation of the observer is north-east of the city: and the Reader may suppose him to be looking, in a contrary direction, towards the Acropolis; which is in the centre of this fine picture: thence, regarding the whole circuit of the *Citadel*, from its north-western side, toward the south and east, the different parts of it occur in the following order; although, to a spectator, they all appear to be comprehended in one view.

Central Object.

The lofty rocks of the ACROPOLIS, crowned with its majestic temples, the *Parthenon*, *Erecthéum*, &c.

Fore Ground.

The whole of the modern CITY OF ATHENS. wtih its gardens, ruins, mosques, and walls, spreading into the plain beneath the *Citadel*. A procession for an *Albanian* wedding, with

music, &c. was at this time passing out of one CHAP of the gates.

Right, or North-Western Wing. The TEMPLE OF THESEUS.

Left, or South-Eastern Wing. The TEMPLE OF JUPITER OLYMPIUS.

View beyond the Citadel, proceeding from West, to South and East.

1. AREOPAGUS. 2. PNYX. 3. ILISSUS. 4. Site of the Temple of CERES in Agræ, and Fountain CALLIRHOE. 5. STADIUM PANATHENAICUM, Site of the LYCEUM, &c.

Parallel Circuit, with a more extended radius.

Hills and Defile of Daphne, or Via Sacra.
 PIRÆEUS. 3. MUNYCHIA and PHALERUM.
 SALAMIS. 5. ÆGINA. 6. More distant Isles.
 HYMETTUS.

Ditto, still more extended.

1. PARNES. 2. Mountains beyond ELEUSIS and MEGARA. 3. Acropolis of CORINTH. 4. Mountains of PELOPONNESUS. 5. The ÆGEAN and distant Islands.

Immediately beneath the eye.

1. PLAIN OF ATHENS, with Albanians engaged in agriculture; herds of cattle, &c. &c.

Hereafter, in describing prospects, where our situation as spectators has been more elevated, and the view thereby rendered still more extensive, as well as the objects more numerous, we shall complete an entire circumference; noting our observations according to the points of a mariner's compass, after the plan adopted by Wheler. During the time that we were occupied in making our survey from this eminence, Lusieri began to trace the outlines of the inestimable view of Athens which he designed, and afterwards completed, upon this spot; adding every colour, even the most delicate tints and touches of his pencil, while the objects he delineated were yet before his eyes'. We remained with him during the greater part of the day: and having now examined all the principal antiquities in the immediate vicinity of Athens, we returned by the gate leading to ANCHES-MUS, where the inscribed marble, relating to Hadrian's reservoir for water at the foot of the

CHAP. HAVING hired some Albanian peasants for the work, and obtained permission from the Waiwode, we began the examination of some of

the wells. Mr. Cripps, in the mean time, superintended the excavation of a tumulus near the road leading to the Piræeus; but the difficulty of carrying on any undertaking of this kind, Excavaowing to the jealousy, not only of the Turks, but also of the Greeks, who always suppose that some secret horde of gold is the object of research, renders it liable to continual interruption. After two days spent in opening the tomb, we had the mortification to find that it had been examined before; and we had good reason to believe that a knowledge of this circumstance was the sole ground of the easy permission we had obtained to begin the labour for the second time. In the examination of the wells, we succeeded better; but our acquisitions were as nothing, compared with those which have since been made'. The reason's which induced the author to suspect that the cleansing of an old well would lead to the discovery of valuable antiquities, were these:

(1) Particularly by Mr. Dodwell, and by Mr. Graham of Trinity College, Cambridge, son of Sir James Graham, Bart. The latter of these gentlemen, in opening one of the wells, restored to the inhabitants of Athens, to their great joy, a very fine spring of water, which burst forth upon the removal of the rubbish by which the well was filled : the most valuable gift he could have made to a city where wa er, particularly scarce.

tions.

Great Antiquity of the Athenian Wells.

first, the wells of Greece were always the resort of its inhabitants; they were places of conversation, of music, dancing, revelling, and almost every kind of public festivity; secondly, that their remote antiquity is evident from the following. extraordinary circumstance. Over the mouth of each well has been placed a massive marble cylinder, nearly corresponding, as to its form, ornaments, height, and diameter, with the marble altars which are so commonly converted by the Turks into mortars for bruising their corn. A very entire altar of this shape is in the Cambridge Collection of Greek Marbles'. These wells had no contrivance for raising water by means of a windlass, or even of the simple lever², common over all the North of Europe, which is often poised by a weight at the outer extremity'. The water rose so near to the surface, that it was almost within reach of the hand; and the mode of raising it was by a hand-bucket, with a rope of twisted herbs. Owing to the general use of this rope, and its

CHAP. VI.

⁽¹⁾ Presented to the author by Bridges Harvey, Esq. M.A. of Jesus College. It was brought from Delos.

⁽²⁾ The lever is now used for some of the wells in Athens; but it seems probable that the use of this mechanical power among the Modern Greeks was introduced by the Albanians.

consequent friction against the sides of the CHAP. well, the interior of those massive marble cylinders has been actually grooved all round, to the depth of two or three inches: in some instances, transverse channels appear crossing the others obliquely, and to an equal depth. An effect so remarkable, caused in solid marble by its attrition with one of the softest substances, affords convincing proof that a great length of time must have elapsed before any one of those furrows in the stone could have been so produced; and that many ages would be requisite to form such channels in any number.

Having selected a dry well for our experiment, whose mouth was covered by a cylinder remarkably distinguished by this appearance, we removed a quantity of stones and rubbish, and found at the bottom a substratum of moist marle. In this humid substance (the original deposit of the water when the well was used), number of terra-cotta vessels, lamps. the pitchers, bottles, some entire, others broken, was very great. We removed thirty-seven in an entire state, of various sizes and forms. They were chiefly of a coarse manufacture, without glazing or ornament of any kind; but the workmen brought up also the feet, handles,

2 2

VI.

CHAP. VI.

necks, and other parts of earthen vases of a very superior quality and workmanship: some of these were fluted, and of a jet black colour; others of a bright red, similar to those innumerable fragments of *terra cotta* found upon the site of all *Grecian* cities; especially in the outer *Ceramicus*¹, and in the *sepulchres of Athens* since opened, as well as those of *Italy* and of *Sicily*. While this work was going on, a *lamp* was brought to us, without any information of the place where it was found, but of such singular beauty and interest, that the author would be guilty of an unpardonable omission if he neglected to insert its particular description: he has an additional motive for so doing; namely,

(1) By collecting upon the spot these fragments of Grecian pottery, and comparing afterwards the fragments found upon the site of one antient city with those discovered upon the site of another, a very marked difference of manufacture may be observed. The Corinthians seemed to have used a particularly heavy and coarse black ware ; that of Athens was the lightest and most elegant ; that of Sicyon the rudest and most antient. The most perfect pottery of Modern Greece is the earthenware of Larissa, where it may be found almost equal in beauty to the antient terra cotta. Mr. Cripps discovered at Athens, upon the outside of the city, fragments of the finest antient vases, lying as in a quarry, and sufficient in quantity to prove that a very large establishment for the manufacture of earthenware once existed upon the spot.' As it remains there at this hour, it may assist in deciding the disputed position of the outer CERAMICUS. "Fecit et Calcosthenes cruda opera Athenis; qui locus ab officind ejus, Ceramicos appellatur." Plin. Hist. Nat. lib. xxxv. c. 12. L. Bat. 1635.

the hope of being one day able to recover this curious relic: for its extraordinary perfection so much excited the cupidity of one of the Roman formatori, that having volunteered the troublesome and difficult task of packing up our antiquities when we were about to leave Athens, he availed himself of the opportunity to steal this lamp; and the theft was not discovered until the case, said by him to contain it, was opened upon its arrival in England. Possibly, therefore, as it may exist in some Cabinet of Europe, the following account of it may hereafter lead to the knowledge of its situation; if it do not prove the cause of its destruction. It was of a black colour, like our dark Wedgwood ware : when first offered to us, it seemed to be corroded and porous; but after it had imbibed a little oil, it appeared as perfect as if it had recently issued from the hands of the Athenian In shape and size it resembled the potter. generality of antient terra-cotta lamps; being of a circular form, and about three inches in diameter, with a protruding lip for the wick in one part of the circumference. Upon the top of it, a lion was represented in an erect posture; the figure of the animal expressing all the energy and greatness of style peculiar to the

CHAP.

CHAP. best age of sculpture. Within the circle at the vi. bottom of the lamp was this inscription:

Curious Inscription upon a Terracotta Lamp,

- (1)

ΣΩΚΡΑΤ ΗΣΕΧΕ ΖΩΟΝ

SOCRATES · ACCEPT · THIS. ANIMAL

It seems therefore to have been originally one of those offerings called regrigar $d\gamma d\lambda \mu a \tau a$ by *Euripides'*, the *imagines*, or, as usually translated, grata munera, which the friends of a deceased person were wont to carry after the corpse during the funeral procession: and perhaps it was deposited in the grave of the most celebrated philosopher of the antient world.

During the first days of *November* we continued our researches with the utmost diligence, both in making these excavations, and in endeavouring to find Inscriptions which had escaped the notice of former travellers. Upon the third of this month we set out upon an excursion to

> Καὶ μὴν δﻮῶ σὸν πωτίεα γιεαιῷ ποδὶ Στιίχοντ, ὀπαδοὺς τ' ἰν χιεοῖν δάμαετι σῆ Κόσμον φίεοντας, νιετίεων ἀγάλματα. Euripid. in Alc. v. 612. p. 282. Cantab. 1694.

HYMETTUS^{*}, intending to visit the summit of CHAP. the mountain. Having taken with us horses, a guide, and provisions for the day, we left Athens for this purpose, at sun-rise; Signor Lusieri being of our party. In our way, we crossed the Ilissus; and again passing the Stadium, we visited a small Greek chapel toward the east, upon the top of a hill. This building was alluded to in the preceding Chapter, as Temple of marking the site of the Temple of Diana Agraa, or Agrotera. We saw here the remains of columns of three distinct orders in architecture; the most antient Doric, the Ionic, and the Corinthian. It is rather the situation of the building, with reference to the line of observation pursued by Pausanias', than any specific part of its remaining antiquities, which may be relied upon, as denoting where this temple of Diana

VI. Excursion to Hymcttus.

Diana.

(2) "Many places in Greece preserve their antient names : others retain them with slight alteration; as, Elimbo for Olympus; Lyakoura for Parnassus, from Lycorea the antient city upon that mountain : others bear appellations imposed on them by the Venetians and Genoese : but no instance has occurred of a more singular metamorphosis in Grecian nomenclature than in the name of HYMETTUS. The Venetians, who called it Monte Hymetto, corrupted it into Monte Matto: Matto signifies mod ; and the Modern Greeks have chosen to 'translate the two words literally, by Trelo-Vouni, ' the Mad Mountain." Walpole's MS. Journal.

(3) Vid. Pausan. in Atticis, c. 19. p. 44. Edit. Kuhnii. Lips. 1696.

stood. After his visit to the GARDENS, and the CHAP. TEMPLE OF VENUS (in hortis), having mentioned the SHRINE OF HERCULES (which was called Cynosárges), and the LYCEUM, and being still eastward of the STADIUM, he crosses the ILISSUS, in that part of it where it received the ERIDANUS; here, entering AGRA, or AGRE¹; immediately upon his arrival at the southern side of the river[®], he notices the TEMPLE OF DIANA AGROTERA. No part of his description seems therefore involved in less uncertainty than his position of this edifice; which exactly corresponds with that of the Greek chapel now mentioned.

Monastery. Hence we proceeded to the Monastery of Saliani³, upon MOUNT HYMETTUS. Chandler believed this to have been antiently renowned as the scene where the jealous Procris met her

> (3) So we believed the name to be pronounced ; perhaps corrupted from some derivative of Salsie, fluctuo; the water here continually gushing forth. Wheler calls this place Hagios Kyriani; Chandler, Cyriani; and Stuart has written it, in his Map of Attica, Monastery of Syriani. " L 1 (.)

VI.

fate from the unerring dart of Diana, which she had given to her husband Cephalus*. A temple of Venus stood upon the spot; and near to it there was a fountain whose water was believed to conduce to pregnancy, and to facilitate parturition. The modern superstition with regard to the fountain, which is close to the Convent, confirmed his opinion in a manner that he does not appear to have noticed: the priest told him, that " a dove is seen to fly down from heaven, to drink of the water annually, at the Feast of Pentecost." It is remarkable that an ignorant superstition should thus have selected the bird which was peculiarly sacred to Venus: and Chandler also adds, that the Greek women still repair to the Monastery at particular seasons. Being earnest in the pursuit of antiquities, we neglected to attend, as we ought to have done, to the traditions of the inhabitants; but we found enough to convince us that this was the site of some antient temple. We observed in the church of the Monastery several Ionic columns; also the shaft of a pillar of granite; and at the fountain we saw the head of a bull, or of a cow', sculptured upon a white marble Soros,

CHAP. VI.

now used as a cistern. This Monastery is visible from Athens. The water from the fountain falls into the Ilissus. We found here a slab of white marble, with an inscription: the stone had been brought from some ruins near another convent, higher up than the Monastery, and upon an opposite eminence towards Athens. Our guide wished much to conduct us thither; but we postponed going, in order to copy this inscription, until it was too late; as we wished to reach the summit of Hymettus before noon, that we might there estimate the temperature of the atmosphere, and also avail ourselves of the clearness and serenity of the weather for other observations. From the distant view we had of those ruins, added to the description given of them, there seemed to be a groundplot and foundation as for a temple. This marble, which had been brought from the spot, will of course render the place worthy the examination of future travellers. The subject of the Inscription relates to the genealogy of some family. We have since found that it

image of IsIS, according to *Herodotus* (*lib.* ii.), had the form of a woman with the horns of a *cow* upon her head, as the *Grecians* represented IO. *Wheler* seems to allude to this piece of sculpture, (*See Journey into Greece, Book* VII. p. 411. Lond. 1682.) but he calls it "a sheep's head."

has been already published by *Chandler*, who takes no notice of the place where it was originally discovered; but as it may be consulted in the works of that author, we shall not offer it a second time to the public¹.

From this Monastery it is practicable to ride the whole way to the summit of Hymettus; but we preferred walking, that we might the more leisurely examine every object, and collect the few plants in flower at this late season of the year³. We saw partridges in great abundance; and bees, in all parts of the mountain; not only at the Monastery, where a regular apiary is kept, but also in such number dispersed and feeding about the higher parts of Hymettus, that the primeval breed³ may still exist among the numerous wild stocks which inhabit the hollow trees and clefts of the rocks. Their favourite food, the wild Thyme ($\xi g \pi v \lambda \lambda ov$, Thymus Serpyllum, Linn.), in almost every variety, grows

Visit to the Summit of the Mountain.

(2) Our specimens were all lost in the wreck of the Princessa merchantman; but Wheler has given a catalogue of the plants collected by him in the month of February, upon this mountain. See Journey into Greece, Book VI. p. 414. Lond. 1682.

. (3) The Antients believed that bees were first bred here, and that all other bees were but colonies from this mountain. CHAP. VI.

CHAP. VI. abundantly upon the mountain, together with Salvia pomifera, and Salvia verbascum; and to this circumstance may be owing the very heating quality of the honey of Hymettus. The powerful aromatic exhalation of these plants fills the air with a spicy odour: indeed, this scented atmosphere is a very striking characteristic of Greece and of its islands, but it peculiarly distinguishes the mountains of Attica. The $\Theta i \mu o \varsigma$ of Theophrastus and Dioscorides was used as incense in the temples. We heard nothing of the silver mines' mentioned by Strabo,

(1) "The Athenians, we are informed, obtained copper from Colone, close to Athens; where Sophocles has laid the scene of one of his most beautiful plays. Silver was procured from Laurium, and was the metal in general circulation : there were ten different coins of silver, from the tetradrachm to the quarter of an obolus. Lead was purchased from the Tyrians : Tor poluptor ror in the Tueins, are the words of Aristides. II. De Cur. Rei Fam. 396. Gold was so scarce, at one time, in Greece, that the Lacedæmonians could find none to gild the face of the statue of Apollo at Amyclæ. (our sugir-Rovers in Th ELLas xpusion, Athene, 232.) and therefore sent to Lydia for it. There was an abundance when the Temple of Apollo was plundered by the Phocian tyrants, and when Alexander had pillaged, says Athenæus, the treasures of Asia : lib. vi. 231. It is worth remarking, that we can tell pretty nearly the century in which the mines of silver of Laurium (which was about thirty miles S. E. from Athens) began to fail; at least according to the opinion of the Antients. Thucydides mentions them in two places of his History (Book ii. and vi.): in the sixth book he talks of the revenue derived from the silver mines. It is the object of a treatise of Xenophon to recommend the Athenians to work the silver mines of Laurium (mig) mogent). But what do Strabo and Pausanias say? The latter asserts that they had failed. Strabo's words

where the best honey of Hymettus was found. The ascent was truly delightful; the different prospects varying in extent and magnificence, as we pursued a devious track among the rocks, in our way upward to the top of the mountain. We reached the summit about twelve o'clock: there was no wind, and the sky was without a cloud. We had some difficulty to find a shaded situation for the thermometer: however, the difference amounted only to three degrees of Fahrenheit, whether the scale remained in the shade, or exposed to the sun's rays. The mercury stood at 48° in the former situation, and it rose only to 51° in the latter; affording sufficient proof of the mild climate of Attica, in this warm temperature upon the summit of its loftiest mountain, in the beginning of the month of November 2. Even upon this

words are decisive as to this point: (Book ix.) ' The silver mines in Attica, formerly celebrated, are now deficient. The men who work there, submitting again to the operation of fire the former refuse and scoria (*szwejar*), find silver still in it : the Antients having used their furnaces without any skill.' The ground about Laurium is covered frequently, for many yards, with great quantities of scoria, lying in the road.'' Walpote's MS. Journal.

CHAP. VI.

CHAP.

350

elevated spot, and upon the naked surface of the limestone, without an herb or a drop of water to allure it, one of the wild bees came and settled upon the scale of the thermometer. We did not perceive any remarkable difference between the appearance of this insect upon Hymettus, and the common bee of our own country, except that we thought the former rather smaller, and of a more golden colour. Lusieri had already placed himself upon a sloping part of the summit facing the south, and was beginning to delineate the wonderful sight he beheld. From the spot where he was seated, a tremendous chasm of Hymettus. awfully grand, extended, in one wide amazing sweep, from the summit to the base of the mountain. Into this precipitous ravine there projected from its sides the most enormous crags and perpendicular rocks. These he had chosen to be the fore-ground of his sublime picture; the eye looking down into an abyss, which at the bottom opened into a glorious valley, reaching across the whole promontory of Attica, from sea to sea. Beyond appeared the broad and purple surface of the Ægean, studded with innumerable islands, and shining with streaks of the most effulgent light. While he was engaged in his delightful employment,

we undertook a task of less difficulty; namely, CHAP. that of making a panoramic survey of all the principal objects; noting their situation according to the points of a mariner's compass, which we placed upon the upmost pinnacle of the mountain; beginning with the north point, and proceeding regularly from left to right, so as to complete an entire circumference, whose centre is the summit of Hymettus.

P North-West and by West.

MEGARA; MONS GERANEA; and other high mountains more distant.

North-West.

ELEUSIS, backed by a mountainous territory: the extremity of the SARONIC GULPH: and in this direction the point of Ægaleos is visible where Xerxes is supposed to have sat during the battle of Salamis.

Then succeeds the Plain of Athens, covered, on the northern side, by extensive olive-plantations: afterwards, still nearer to the eye, appear the ACROPOLIS and CITY OF ATHENS, and all the ATHENIAN PLAIN at the foot of Hymettus. ATHENS, as viewed from this situation, makes a most beautiful appearance: a description of it may be written as from a model. It lies in a valley, having PHALERUM and THE SEA to the west: MOUNT PENTELICUS to the east: the mountainous range of PARNES, or Nozia, to the north; and HYMETTUS upon the south. In the plain of this fine valley, thus surrounded by vast natural ramparts, there are other very remarkable geological features. A series of six insular mountain rocks, of breccia, surmounted by limestone, rise in the plain in very regular succession, from the east towards the west; (that is to say, from Pentelicus towards the sea;) gradually diminishing in that direction. The Hill of Musæus is the last of the succession; that CHAP

VI.

CHAP. VI. is to say, it is the sixth in the series towards Phalerum. The Acropolis of Athens stands upon the fifth, or the last but one, towards the sea. The fourth is the lofty rock called Mount Anchesmus; and this rock, by some convulsion of Nature, has been separated into two parts: farther towards the east are three other, carrying on the series towards. Pentelicus. On the northern side of the city is a range of olive plantations: between these and Hymettus, in the plain, occurs the chain of rocks, extending east and west: the south side of the plain, nearer to the base of Hymettus, wears a barren aspect¹, broken by

(1) " On the road from Marathon to the Monastery on Pentelicus, and on that from Keratia back to Athens, we passed some spots which in beauty of natural scenery might vie with any thing we had seen in Greece, The Athenians were very partial to a country life (Thucydides, lib. ii.); and many of these places, like that beautiful village of Cephissias, seven miles to the north of Athens, which Aulus Gellius has described, were the favourite abodes of the Athenians, whenever they could retire from the noise of the popular assemblies at Athens. It does not however appear that they attended much to the agriculture of the country : " Every man," says Xenophon, (de (Econ.) " may be a farmer ; no art or skill is requisite :" a very good proof, observes Hume, that agriculture was not much understood. When we consider this, and the natural sterility of Attica, which the Antients so often mention, (see the Schol. on Olym. 7. of Pindar,) we cannot but wonder at the great population which the country was able to maintain. Hevne says barley was indigenous in the north of Attica : and the olive-tree, which abounds in this country, might have contributed to the support of great numbers; it being used antiently, as it is now, for a common article

mountainets, hills, and rocks. Parnes, Pentelicus, CHAP, and Hymettus, are all barren, and, from this vi. elevation, seem to be destitute of trees.

North-West and by North.

Exceeding high mountains of BŒOTIA and PHOCIS; one, nearer to the eye, shaped like a saddle, forming a range with Parnes from E.N.E. to w.s.w. In this direction, and immediately under the view, lies the double-rock of Anchesmus, in the Athenian plain, to the east of Athens. With regard to the distant mountains, they are probably HELICON, now Zagara, and CITHÆRON, now Elatæa. Wheler lays the first N.W. by W.; and the second, he says, begins N.W. by W.

North North-West.

Another distant and very lofty mountain,

article of daily food. But immense supplies of corn were constantly imported from Sicily, Egypt, and the Euxine. Attica was not able to maintain her inhabitants: these we may calculate, in the year 312 A.C. at 524,000; supposing the text in Athenæus to be not corrupted. There were 21,000 citizens, and 10,000 strangers: allowing to each of these a wife and two children, we have the rumber of free persons, 124,000; and adding the slaves, (according to Athenæus.) 400,000, we find 524,000 to be the aggregate. Attica contained 855 square leagues." Wulpole's MS. Journal.

CHAP. appearing with its blue peak towering behind the VI. range of Mount Parnes, and possibly PARNASSUS.

North and by West.

Part of the range of PARNES; and, nearer to the eye, the fine valley or plain of Athens.

North.

Has been already noticed. The Circle is therefore here completed.

The desire of leaving a memorial of the visit one has paid to any memorable spot, seems to be so natural, that however the practice may have been derided, the most eminent travellers, in common with the most insignificant, have left their names in some conspicuous situation: those of Wheler and Spon have been observed upon the walls of the Temple of Theseus; that of Shaw remains in the Franciscan Convent at Jerusalem; that of Pococke at Thebes, in Upper Egypt; and that of Hasselquist upon the principal pyramid of Memphis. Upon the summit of Hymettus no such inscriptions appeared; but the naked surface of the limestone seemed to be so well calculated for their preservation, that we felt a reluctance to return without carving our names upon the top of the mountain. As

soon as we had done this, we descended once more towards the Convent, where we arrived late in the evening, and immediately proceeded to Athens.

The following day was attended by a singular adventure. We had agreed to spend the greater part of this day with Lusieri, among the antiquities of the Citadel; and for the purpose, Mr. Cripps accompanied him to the Acropolis soon after breakfast. The author followed towards noon. About half-way up the steep which Singular Adventure leads to the Propylæa, he heard a noise of that befel laughter and of many clamorous voices, proceeding from a building situate in an area upon the left hand, which had the appearance of being a public bath. As it is always customary for strangers to mingle with the Moslems in such places without molestation, and as it had been the author's practice to bathe frequently for the preservation of his health, he advanced without further consideration towards the entrance, which he found covered with a carpet hanging before it. No human creature was to be seen without the bath, whether Turk or Greek. This was rather remarkable; but it seemed to be explained in the numbers who were heard talking within. As the author drew nearer to

theAuthor

361

CHAP. VI.

CHAP.

the door of the building, the voices were heard rather in a shriller tone than usual; but no suspicion entering into his mind, as to the sort of bathers which he would find assembled, he put aside the carpet, and, stepping beneath the main dome of the bagnio, suddenly found himself in the midst of the principal women of Athens, many of whom were unveiled in every sense of the term, and all of them in utter amazement at the madness of the intrusion. The first impulse of astonishment entirely superseded all thought of the danger of his situation: he remained fixed and mute as a statue. A general shriek soon brought him to his recollection. Several black female slaves ran towards him, interposing before his face napkins, and driving him backwards towards the entrance. He endeavoured, by signs and broken sentences, to convince them that he came there to bathe in the ordinary way; but this awkward attempt at an apology converted their fears into laughter, accompanied by sounds of Hist! Hist! and the most eager entreaties to him to abscond quickly, and without observation. As he drew back, he distinctly heard some one' say, in Italian, that if he were seen he would be shot. By this time the negro women were around him, covering his eyes with their hands and

towels, and rather impeding his retreat, by pushing him blindfolded towards the door; whence he fled with all possible expedition. As the sight of women in Turkey is rare, and always obtained with difficulty, the Reader may perhaps wish to know what sort of beings the author saw, during the short interval that his eves were open within the *lagnio*; although he can only describe the scene from a confused recollection. Upon the left hand, as he entered, Descripthere was an elderly female, who appeared to be of considerable rank, from the number of slaves sumptuously clad and in waiting upon her. She was reclined, as it is usual in all Turkish baths, upon a sort of diván, or raised floor, surrounding the circular hall of the bath, smoking and drinking coffee. A rich embroidered covering of green silk had been spread over her. Her slaves stood by her side, upon the marble pavement of the bath. Many other women of different ages were seated, or standing, or lying, upon the same divan. Some appeared coming in high wooden clogs from the sudatories or interior chambers of the bath. towards the divan; their long hair hanging dishevelled and straight, almost to the ground: the temperature of those cells had flushed their faces with a warm glow, seldom seen upon the

tion of the Ceremonies of the Women's Bath.

CHAP. VI.

CHAP. VI. pale and faded cheeks of the Grecian and Turkish women. Some of them were very handsome. Within the centre of the area, immediately beneath the dome, the black women and other attendants of the bath were busied heating towels, and preparing pipes and coffee for the bathers; according to the custom observed when men frequent these places.

> The cause of this mistake remains now to be explained. This bath was not peculiarly set apart for the use of females: it was frequented also by the male inhabitants; but at stated hours the women have the privilege of appropriating it to their use; and this happened to be their time of bathing; consequently the men were absent. Upon such occasions, the Greek and Turkish women bathe together : owing to this circumstance, the news of the adventure was very speedily circulated over all Athens. As we did not return until the evening, the family with whom we resided; hearing of the affair, began to be uneasy, lest it had been brought to a serious termination; well knowing that if any of the Arnaouts, or of the Turkish guard belonging to the Citadel, had seen a man coming from the bath while the women were there, they, without hesitation or ceremony,

would have put him instantly to death: and the CHAP. only reason we could assign for its never being afterwards noticed, was, that however generally it became the subject of conversation among the Turkish females of the city, their Moslem masters were kept in ignorance of the transaction.

We remained in the Citadel during the rest Further of the day; not only to avoid any probable distributions in the consequences of this affair, but also that we Acropolis. might once more leisurely survey the interesting objects it contains; and, lastly, have an opportunity of seeing, from the Parthenon, the sun setting behind the Acropolis of Corinth; one of the finest sights in all Greece.

It was mentioned in the preceding Chapter, that the frieze of the Erecthéum, and of its porticoes, consists of a bluish-grey limestone, resembling slate; and that the tympanum of the pediment is likewise of the same stone; but the rest of the temple is of marble. Perhaps this kind of limestone was introduced into those parts of the building intended to contain inscriptions; because the letters, when cut, being of a different colour from the polished

stone, would thereby be rendered the more conspicuous. A circumstance which renders this probable, is, that inscriptions are often found upon this kind of limestone, among the remains of buildings constructed of marble. The author found the following Inscription this day, in the *Acropolis*, upon a blue slate-like limestone:

ΓΟΛΥΛΛΟΣΓΟΛΥΛΛΙΔΟΥΓΝΑΙΑΙΕΥΣ ΕΙΚΟΝΑΤΗΝΔΑΝΕΘΗΚΕΠΟΛΥΣΤΡΑΤΟΣΑΥΤΟΥΑΔΕΛΦΟΝ ΝΝΗΜΟΣΥΝΗΝΘΝΗΤΟΥΣΩΜΑΤΟΣΑΘΑΝΑΤΟΝ

The name written in the first line, Polyllus, seems to have been inscribed beneath the statue (image) of a person who belonged to one of the $\delta \tilde{n} \mu o i$ of Attica. $\Pi \alpha_1 \alpha_2 \epsilon \hat{v}_5 \delta \tilde{n} \mu o s$, that is to say, *Pæaniensis populus*; for in the verses which follow, we read, that "Polystratus raised this representation — his own brother; an immortal memorial of a mortal body."

If the statue were of white marble, the blue limestone placed below it may have been selected as better adapted for the purpose of adding the inscription.

We also copied an Inscription of the Roman times, relating to "Pammenes the son of Zeno of

366

Afterwards, Lusieri shewed to us an inscribed marble which he had been ordered to send to England, with the spoils of the Parthenon; but as the author does not know whether it met with the fate of a large portion of the sculpture in Cerigo Bay, or ultimately reached its destination, he will subjoin the copy he made of this Inscription upon the spot, because it is one of the most antient that have been found in Greece'. It is written in what are called *Cadmæan* letters; recording the names of certain Athenians and their tribes. The double vowels were not in general use before the Archonship of Euclid in the ninety-fourth Olympiad. Instead of **E** we have here X & as in TIMOX & ENO &. The forms also of the Gamma, Lambda, and Sigma, are most antient; they are thus written, N, L, and ξ . The H is used for the aspirate, as in HIPOCONTIDOS. In other respects, as it

(1) This marble is now in England.

CHAP. the exception of one which we afterwards found - in a school-room, near the celebrated Temple of the Winds. It was inscribed upon a marble bas-relief, representing a female figure seated, holding by the hand an old man who is standing before her. As this brief inscription will be the last we shall notice in Athens, it may be here introduced, as a companion of those already, given in this Chapter. The Reader is referred to Suidas and Harpocration for an illustration of the word Aiginieús. ÆGILIA was one of the Attic diquoi, and belonged to the tribe Antiochis.

Additional Remarks upon the Parthenon.

The sun was now setting, and we repaired to the Parthenon. This building in its entire state, either as a Heathen temple, or as a Christian sanctuary, was lighted only by means of lamps: it had no windows; but the darkness of the interior was calculated to aid the Pagan ceremonies

erudition and critical acumen of that accomplished scholar, and learned antiquary, Richard Payne Knight, Esq. As this marble was originally removed from the Acropolis, it may be proper here to add, that it preserves a record of a very interesting nature; nothing less than the name of the architect who built the Erecthéum ; namely, PHILO-CLES OF ACHARNE. This part of the Inscription was recovered by W. Wilkins, Esq. who communicated the circumstance to the author.

VI.

by one of the most powerful agents of supersti- CHAP. tion. The priests at Jerusalem have profited by a similar mode of construction, for their pretended miracle of the "holy fire" at the Tomb of the Messiah; and the remains of many antient crypts and buildings in Egypt and in Greece seem to prove that the earliest places of idolatrous worship were all calculated to obstruct rather than to admit the light. Even in its present dilapidated state, the Parthenon still retains something of its original gloomy character: it is this which gives such a striking effect to the appearance of the distant scenery, as it is beheld through the portal by a spectator from within, who approaches the western entrance. The Acropolis of Corinth is so conspicuous from within the nave, that the portal of the temple seems to have been contrived for the express purpose of guiding the eye of the spectator precisely to that point of view. Perhaps there was another temple, with a corresponding scope of observation, within the Corinthian Citadel. Something of this nature may be observed in the construction of old Roman-Catholic churches. where there are crevices calculated for the purpose of guiding the eye, through the darkness of the night, towards other sanctuaries remotely situate; whether for any purpose of

BB2

Effect of Sun-set behind the Mountains of Peloponnesus.

religious intercourse, by means of lights conveying signs to distant priests of the celebration of particular solemnities, or as beacons for national signals, it is not pretended to determine. As evening drew on, the lengthening shadows began to blend all the lesser tints and to give breadth and a bolder outline to the vast objects in the glorious prospect seen from this building, so as to exhibit them in distinct masses: the surface of the Sinu. Saronicus, completely land-locked, resembled that of a shining lake, surrounded by mountains of majestic form, and illustrious in the most affecting recollections. There is not one of those mountains but may be described, in the language of our classic bard, as "breathing inspiration." Every portion of territory comprehended in the general survey has been rendered memorable as the scene of some conspicuous event in Grecian story; either as the land of genius, or the field of heroism; as honoured by the poet's cradle, or by the patriot's grave; as exciting the remembrance of all by which human-nature has been adorned and dignified; or as proclaiming the awful mandate which ordains that not only talents and virtue, but also states and empires, and even the earth itself, shall pass away. The

declining sun, casting its last rays upon the distant summits of *Peloponnesus*, and tinging with parting glory the mountains of *Argolis* and *Achaia*, gave a grand but mournful solemnity both to the natural and the moral prospect. It soon disappeared. Emblematical of the intellectual darkness now covering those once enlightened regions, night came on, shrouding every feature of the landscape with her dusky veil.

On Thursday, November the fifth, we left Athens at sun-rise, for the Piræeus; having resolved to sail to Epidaurus; and after visiting Epidauria from and Argolis, to return through the northern Athens for the Pelodistricts of PELOPONNESUS, towards Megara ponnesus. and Eleusis. The Governor of Athens had kindly commissioned a relation of his family, a most amiable and worthy Turk, to accompany us in the capacity of Tchohadar; a word which we shall not attempt to translate: it is enough to say that such was his title, and that he travelled with us as an officer who was to provide for us, upon all occasions, and to be responsible for our safety among the Albanians. Our caïque had remained at anchor since our arrival: the men belonging to her had been daily employed in repairing the

CHAP. VII. Departure

DEPARTURE FROM ATHENS."

Extraordinary Talents of a *Calmuck* Artist.

sails and rigging. Lusieri offered to accompany us as far as Ægina; having long wished for an . opportunity of seeing that island. Although rich in valuable antiquities, it had been strangely overlooked by almost every traveller, excepting Chandler. As he expected ample employment for his pencil, he was desirous of being also attended by one of the most extraordinary. characters that has been added to the list of celebrated artists since the days of Phidias. This person was by birth a Calmuck, of the name of Theodore: he had distinguished himself among the painters at Rome, and had been brought to Athens to join the band of artists employed by our Ambassador, over which Lusieri presided. With the most decided physiognomy of the wildest of his native tribes, although as much humanized in his appearance as it was possible. to make him by the aid of European dress and habits, he still retained some of the original characteristics of his countrymen; and, among others, a true Scythian relish for spirituous liquor. By the judicious administration of brandy, Lusieri could elicit from him, for the use of his patron, specimens of his art, combining the most astonishing genius with the strictest accuracy and the most exquisite taste. Theodore presented a marvellous example of the force of

CHAP. VII.

natural genius unsubdued by the most powerful obstacles. Educated in slavery; trained to the business of his profession beneath the active cudgels of his Russian masters; having also imbibed with his earliest impressions the servile propensities and sensual appetites of the tyrants he had been taught to revere; this extraordinary man arrived in Athens like another Euphranor, rivalling all that the Fine Arts had produced under circumstances the most favourable to their birth and maturity. The talents of Theodore, as a painter, were not confined, as commonly is the case among Russian artists, to mere works of imitation: although he could copy every thing, he could invent also; and his mind partook largely of the superior powers of original genius. With the most surprising ability, he restored and inserted into his drawings all the sculpture of which parts only remained in the mutilated bas-reliefs and buildings of the Acropolis. Besides this, he delineated, in a style of superior excellence, the same sculptures according to the precise state of decay in which they at present exist¹.

THE PIRÆEUS.

CHAP. VII.

Further Account of the *Piræeus* the "LONO WALLS."

There are many Ruins about the three ports, Munychia, Phalerum, and the Piræeus; and we may look to future excavations in their vicinity as likely to bring to light many valuable antiquities. The remains of the LONG WALLS which joined the Piræeus to Athens, (making of it a burgh similar to what Leith is with respect to Edinburgh¹,) although very indistinct, yet may be traced sufficiently to ascertain the space they formerly included. These walls appear to have had different names (distinguishing them from the town walls of Piræeus) among the Greeks and Romans. By the former they were termed either Mazeà reign, the Long walls, or Mazeà oxédy, literally answering to a nick-name bestowed upon one of our kings of England, who was called Long-shanks. We find them alluded to, under this appellation, by Diodorus Siculus; as a term whereby they are distinguished from the Piræean walls^e. The Romans adopted a different appellation: by them the "long-shanks" were

(1) Edinburgh exhibits a very correct model of a Grecian city: and with its Acropolis, Town, and Harbour, it bears some resemblance to Athens and the Piræeus.

THE PIRÆEUS.

called the "arms," or "long arms." They are thus mentioned by $Livy^3$, and by Propertius⁴. A corrupt mode of writing the word Piræeus seems to have been adopted by some authors, who express $\Pi_{\mathfrak{slgals}}$ by Piræus. Meursius, upon the testimony of all the early Greek authorities, is decisive for the former reading⁵. In his admirable treatise upon this harbour and its antiquities, he has concentrated with wonderful erudition every thing that the Antients have left concerning its history. In its original state it had been an island, whence it received its name⁶, like many later towns⁷, from its ferry⁸.

CHAP. VII.

Tomb of Themistocles. Travellers have pretended to recognise the tomb of *Themistocles*. A square stone resting on a simple base, and destitute of any ornament, was all that denoted the place of his interment. It was near to the principal harbour¹, of course that of *Piræeus*², containing three smaller ports, as *docks*³: for the port of *Phalerum*, within the *road* of that name, was very small⁴. Its situation seems to be so clearly designated by a passage in *Plutarch*, at the end of his life of

THE PIRÆEUS

Themistocles', that it would seem almost impossible to mistake the spot. It was situate at the promontory of Alcimus, where the land, making an elbow, sheltered a part of the harbour; here, above the still water, might be seen the tomb. The base, although simple, as stated by Pausanias, is by Plutarch said to have been of no inconsiderable magnitude "; and the tomb itself, that is to say, the Soros, resembled an altar placed thereon. Guided by this clue, we felt almost a conviction that we had discovered all that now remains of this monument. The promontory alluded to by Plutarch constitutes the southern side of the entrance to the harbour': jutting out from the Piræean or Munychian peninsula, it forms, with the opposite promontory of Eëtion, the natural mouth of the port, lying towards the west, that is to say, beyond the artificial piers whereby it was inwardly closed⁸.

VOYAGE TO ÆGINA.

CHAP. VII.

Remains of this Monument. Here we landed; and found precisely the sort of base alluded to by the historian; partly cut in the natural rock, and partly an artificial structure; so that a person ascended to the *Soros*, as by steps, from the shore of the sea. Our position of the *tomb* may be liable to dispute: the Reader, having the facts stated, will determine for himself. Of the *Soros*, not a trace is now remaining.

Objects visible in passing the Gulph.

Belbina.

As we sailed from the *Piræeus*, we soon perceived the *Acropolis of Corinth*, and, behind it, high mountains which were much covered by clouds, although the day was remarkably fine. We lost some time in the harbour, and were afterwards detained by calms. About three o'clock, P. M. we passed a small island, called *Belbina* by *D'Anville*¹. About an hour before, we had observed the thermometer, in the middle of the gulph: the mercury then stood at 68° of *Fahrenheit*. A mountain of very great elevation was now visible behind the lofty rock of the *Corinthian* Citadel, and at a great distance.

(1) Its modern name is Lavousa, according to D'Anville's Chart of the ARCHIPELAGO. Chandler considers the Island of Belbina as lying towards the mouth of the Gulph. See Travels in Greece, p. 11. Oxf. 1776.

VOYAGE TO ÆGINA.

Lusieri insisted upon its being Parnassus; and CHAP. Theodore was of the same opinion. Judging from our position, it could not have been one of the mountains of Peloponnesus; and therefore, supposing it to have been situate either in Ætolia or Phocis, the circumstance alone is sufficient to shew how little agreement our best maps have with actual observations, as to the relative position of places in GREECE. De L'Isle² is, perhaps, in this respect, more disposed to confirm what is here written, than D'Anville: yet in neither of their maps of the country would a line drawn from the island we have mentioned, through the Acro-Corinthus, reach the mountainous territories to the north of the Gulph of Corinth. Such a line, traced upon D'Anville's Map of Greece', would traverse the Sinus Corinthiacus, far to the south of all Phocis and the land of the Locri Ozolæ; and would only enter Ætolia. near the mouths of the Evenus and Archeloüs rivers. D'Anville's Chart of the Archipelago* is liable to the same remarks; we dare not call them objections, until they have

ÆGINA.

CHAP. VII.

Temple of Jupiter Panhellenius.

been confirmed by other travellers'. About five, P.M. we were close in with ÆGINA: and as we drew near to the island, we had a fine view of the magnificent remains of the Temple of Jupiter Panhellenius; its numerous Doric columns standing in a most conspicuous situation upon the mountain Panhellenius, high above the northeastern shore of the island, and rising among trees, as if surrounded by woods. This is the most antient and the most remarkable Ruin of all the temples in Greece: the inhabitants of Ægina, in a very remote age, maintained that it was built by ÆACUS. Chandler had given so copious a description of Ægina, and of this temple; that to begin the examination of the island again, without being able to make any excavations, we considered as likely to be attended with little addition to our stock of information; and almost as an encroachment upon ground already well occupied. We therefore

(1) The author having since consulted his friend, Mr. Hawkins, upon this subject, (whose trigonometrical surveys of Greece have proved the extreme inaccuracy even of our best maps of that Country,) has been informed by this eminent traveller, that the high mountain which is thus said to interlineate with the Acropolis, when viewed from the Isle now called *Plataida* ($\Pi\lambda\alpha\pi\alphai\partial\alpha$), can be no other than CYLLENE, now Mount Zyria, in the Morea.

ÆGINA.

resolved to continue our voyage as soon as we had landed Lusieri and the Calmuck². Sailing round the north-western point of the island, we Antiquiobserved a very large barrow, upon the shore : the Port. this is noticed by Chandler' as the mound of earth (your raised by Telamon after the death of Phocus, as it was seen by Pausanias in the second Near to this mound there was a century⁴.

(2) We had good reason afterwards to repent of our folly in making this resolution; for although Chandler spent some time upon the island, it has, in fact, been little visited by travellers. Lusieri found here both medals and vases in such great number, that he was under the necessity of dismissing the peasants who had amassed them, without purchasing more than half that were brought to him; although they were offered for a very trifling consideration. The medals and the vases which he collected were of very high antiquity. The medals were either in silver or lead; and of that rude globular form, with the tortoise on one side, and a mere indentation on the other, which is well known to characterize the earliest Grecian coinage : indeed, the art of coining money was first introduced by the inhabitants of this island. Of the terra-cotta vases which he collected, we afterwards saw several in his possession : they were small, but of the most beautiful workmanship; and as a proof of their great antiquity, it is necessary only to mentiou that the subjects represented upon them were historical, and the paintings monochromatic; black, upon a red ground. We have since recommended it to persons visiting Greece, to be diligent in their researches upon ÆGINA; and many valuable antiquities have been consequently discovered upon the island.

theatre, next in size and workmanship to that of Hieron in Epidauria, built by Polycletus: and it had this remarkable feature, that it was constructed upon the sloping side of a stadium which was placed behind it; so that the two-structures mutually sustained each other¹. Afterwards, entering the harbour, we landed to view the two Doric pillars yet standing by the sea side : these may be the remains of the Temple of Venus, which stood near the port principally frequented²: and Ægina, even for small vessels, is elsewhere difficult of access, owing to its high cliffs and latent rocks'. We saw none of the inhabitants; but sent the Tchohadar in search of a pilot to conduct our caïque into the port of Epidauria. He returned with a man who pretended to have a perfect knowledge of the coast, and we took him on board; leaving the

stated, that the tomb (τάφος) of Phocus, which is also called χώμα, was near to the ÆΛCKUM: Παξὰ δὶ τὸ Λἰάκιιον, Φώκου τάφος χώμα ἰστὶ, κ. τ. λ. The Æacéum was a tetragonal peribolus of white marble, in a conspicuous part of the city: 'Εν ἰπιφαιίστατο δὶ τῆς πόλιως, τὸ Λἰάκιιον καλούμινον, πιξίβολος τιτεμάγωνος λιυκοῦ Λίδου.

CHAP.

two artists, both of whom were already busied CHAP. VII. in drawing.

As we drew near to PELOPONNESUS, the mountains of Argolis began to appear in great grandeur. We passed along the northern shore of an island, called, by our mariners, Anchestri: Anchestri it was covered with trees '. As the evening drew on, we discovered that our stupid pilot, Ignorance notwithstanding all his boasting, knew no more Pilot. of the coast than the Casiot sailors. As soon as fogs or darkness begin to obscure the land, the Greek pilots' remain in total ignorance of their situation: generally, losing their presence of mind, they either run their ships ashore, or abandon the helm altogether, and have recourse to the picture of some Saint, supplicating his miraculous interference for their safety. It more than once happened to us, to have the responsibility of guiding the vessel, without mariner's compass, chart, or the slightest knowledge of naval affairs. It may be supposed

(4) The name of this island is written Angistri by D'Anville; and by Sir W. Gell, in his valuable Map of ARGOLIS : (See Itin. of Greece, Pl. XXVIII. by W. Gell, Esq. M.A. Member of the Society of Dilettanti. Lond. 1810.) Chandler wrote it nearly as we have done, Anchistre: (Trav. in Greece, p. 200. O.f. 1776.) he says it contained " a few cottages of Albanians."

CHAP. that, under such circumstances, an infant would VII. have been found equally fit for the undertaking. This was pretty much the case upon the present occasion: we were close in with a lee-shore: fortunately, the weather was almost calm; and our interpreter Antonio, by much the best seaman of a bad crew, had stationed himself in the prow of the caïque, and continued sounding as we drew nigh to the land. Presently, being close in with the shore, we discerned the-- mouth of a small cove; into which, by lowering our sails, and taking to the oars, we brought the vessel; and, heaving out the anchor, determined to wait here until the next morning.

> When day-light appeared, we found ourselves in a wild and desert place, without sign of habitation, or any trace of a living being: high above us were rocks, and among these flourished many luxuriant evergreens. We did not remain to make farther examination of this part of the coast; but got the anchor up, and, standing out to sea, bore away towards the south-west. We had not a drop of fresh water on board, but drank wine as a substitute, and ate some cold meat for our breakfast,—the worst beverage and the worst food a traveller can use, who wishes, in this climate, to

prepare himself for the fatigue he must en-CHAP. counter. Our pilot, being also refreshed with the juice of the grape, affected once more to recognise every point of land, and desired to know what port we wished to enter. Being told that we were looking out for the harbour of Epidaurus, or, as it is now called, MIAAYPO, he promised to take the vessel safely in. It was at this time broad day-light, and we thought we might venture under his guidance; accordingly, we were conducted into a small port nearly opposite to Anchestri. Here we landed, at ten o'clock A.M. and sent the Tchohadar to a small town, which the pilot said was near to the port, to order horses. We were surprised in finding but few ruins near the shore; nor was there any appearance to confirm what he had said of its being Pidauro: we saw, indeed, the remains of an old wall, and a marsh filled with reeds and stagnant water, seeming to indicate the former existence of a small inner harbour for boats that had fallen to decay. The air of this place was evidently unwholesome, and we were impatient to leave the spot. When the Tchohadar returned with the horses, he began to cudgel the pilot; having discovered that Pidauro was farther to the south-west; this port being called ETHAAA,

CHAP. VII. pronounced Epi-atha, the Δ sounding like our TH, harsh, as in thee and thou. . It is laid down Epiáda. in some Italian maps under the name of Piada. The pilot now confessed that he had never heard of such a port as Pidauro in his life. As it would have been a vain undertaking to navigate any longer under such auspices, we came to the resolution of dismissing our caïque altogether. We therefore sent back the pilot to Ægina; ordering the good Captain to wait there with his vessel for the return of Lusieri and the Calmuck; and promising him, if he conveyed them in safety to the Piræeus, to give him, in addition to his stipulated hire, a silver coffee-cup, to be made by an Athenian silversmith, and to be inscribed with his name. as a token of our acknowledgments for the many services he had done for us. The poor man seemed to think this cup of much more importance than any payment we had before agreed to make; and we left him, to commence our tour in the PELOPONNESUS.

> The road from the port to the town of EPIADA extends through olive-plantations and vineyards. The town itself is situate upon a lofty ridge of rocks, and was formerly protected by an old castle, still remaining. In

EPIADA."

consequence of our inquiry after antient medals. several Venetian coins were offered to us; and the number of them found here may serve to explain the origin of the castle, which was probably built by the Venetians. But besides these coins, the author purchased here, for twenty piastres, a most beautiful silver tetra- Greek drachm of Alexander the Great, as finely preserved as if it had just issued from the mint; together with some copper coins of Megara. The Greek silver medals, as it is well known, are often covered with a dark surface, in some instances quite black, resembling black varnish: the nature of this investment, perhaps, has not been duly examined: it has been sometimes considered as a sulphuret; but the colour which sulphur gives to silver is of a more dingynature, inclining to grey: the black varnish is a muriat of silver'. It may be decomposed by placing the medals in a boiling solution of

(1) It once happened to the author to open a small case of Greek. silver medals that had been sunk in sea-water. The medals had been separately enveloped in brown paper, which was now become dry. To his great surprise, he found every one of them covered with a fine impalpable powder, as white as snow. Placing them in a window, the action of the sun's rays turned this powder to a dark colour: when a brush was used to remove it, the silver became covered with a black shining varnish, exactly similar to that which covers the antient silver coinage of Greece ; and this proved to be a muriat of silver.

VII

potass; but antiquaries in general do not choose to have the dark varnish removed. All Greek silver coins are not thus discoloured; many, of them retain, in the highest perfection, the natural colour and lustre of the metal: those only exhibit the appearance of a black crust or, varnish which have been exposed to the action of muriatic acid, either by immersion in sea water, or by coming into contact with it, during the time that they have remained buried. in the earth. As it had been our originalintention to land at Epidaurus, to examine the remains of that city, so we determined now to go first to that port: but the people of Epiada. told us that there were scarcely any vestiges. even of ruins there; that all the antiquities we, should find consisted of a headless marble statue answering to the description given by Chandler²); and that the remains of the Temple. of Æsculapius, whom they called 'Aozhanios, were near to Ligurio. "There," said one of the inhabitants, "are the Ruins of his Temple; but the seat of his government and his palace were at EPIDAURUS (Pidauro), although

(2) Travels in Greece, p. 221. Oxford, 1776. Chandler calls it "a maimed statue of bad workmanship."

15 15 W

nothing now remains excepting a few broken pieces of marble." The person who gave us this information seemed to be possessed of more intelligence than it is usual to find among the Greeks: we therefore profited by his instructions, and set out for Ligurid.

The temperature on shore, this day at noon, was the same as it had been upon the preceding day in the middle of the gulph; that is to say, 68° of Fahrenheit. It was four o'clock P.M. before we left Epiada. We noticed here a very remarkable mineral of a jet black colour, which at first sight seemed to be coal, but, upon further examination, it rather resembled asphaltum. It was very soft; and, in places where water had passed over it, the surface was polished. The specimens being lost, this is all the description of it we can now give. Our journey from Epiada towards the interior of Epidauria led us over mountains, and through the most delightful valleys imaginable. In those valleys we found the Arbutus Andrachne, with some other species Arbutus of the same genus flourishing in the greatest exuberance, covered with flowers and fruit. The fruit, in every thing but flavour and smell, resembled large hautbois strawberries: the

Andrachne.

CHAP. VII.

CHAP. berries were cooling and delicious, and every one of our party ate of them¹. This shrub is found all over the Mediterranean : it attains to great perfection in Minorca; and from thence eastward as far as the coast of Syria, it may be found adorning limestone rocks otherwise barren, being never destitute of its dark-green foliage, and assuming its most glorious appearance at a season when other plants have lost their The fruit is one entire year in coming beauty. to maturity; and when ripe, it appears in the midst of its beautiful flowers. The inhabitants of Argolis call this plant Cukoomari: in other parts of Turkey, particularly at Constantinople, it is called Koomaria, which is very near to its Greek name, Kouagos. It is the 'Ardeaying of Theophrastus.

Appearance of the Country.

We passed an antient edifice: it was near to a windmill, in a valley towards the right of our road, and at some distance from us. Nothing could exceed the grandeur of the scenery during the rest of our ride to Ligurid. On every side of us we beheld mountains,

. (1)

"Arbuteos fœtus, montanaque fraga legebant."

- 1 - 1

394

VII.

reaching to the clouds; although we rode CHAP. continually through delicious valleys, covered by cultivated fields, or filled with myrtles, flowering shrubs, and trees. Every fertile spot seemed to be secluded from all the rest of the world, and to be protected from storms by the lofty summits with which it was surrounded. A white dress, worn by the peasants, reminded us of the garments often seen upon antient statues; and it gave to these delightful retreats a costume of the greatest simplicity, with the most striking effect. Lusieri had spoken in rapturous terms of the country he had beheld in Arcadia : but the fields, and the groves, and the mountains, and the vales of Argolis, surpassed all that we had imagined, even from his description of the finest parts of the PELOPONNESUS. Torender the effect of the landscape still more impressive, shepherds, upon distant hills, began to play, as it were an evening-service, upon their reed pipes; seeming to realize the ages of poetic fiction; and filling the mind with dreams of innocence, which, if it dwell anywhere on earth, may perhaps be found in these retreats, apart from the haunts of the disturber, whose "whereabout" is in cities and courts, amidst wealth and ambition and power. All that seems to be dreaded in these pastoral retreats

CHAP: are the casual and rare visits of the Turkish VTL. - lords: and, unfortunately for us, it was necessary that our arrival at Ligurio should be announced by one of their agents; namely, Ibrahim the Tchohadar. Although a very excellent man in his way, he had been brought up under a notion that Greeks and Albanians were a set of inferior beings, whom it was laudable to chastise upon every occasion, and to whom a word should never be uttered without a blow. It was nearly dark when we Ligurid. reached the town; if a long straggling village may bear this appellation. Ibrahim rode first, and had collected a few peasants around him, whom we could just discern by their white habits, assembled near his horse. In answer to his inquiries concerning provisions for the party, they replied; in an humble tone, that they had consumed all the food in their houses, and had nothing left to offer. Instantly; the noise of Ibrahim's lash about their heads and shoulders made them believe he was the herald of a party of Turks, and they fied in all directions: this was "the only way," he said. "to make those misbegotten dogs provide any thing for our supper." It was quite surprising to see how such lusty fellows, any one of whom was more than a match for Ibrahim,

LIGURIO.

suffered themselves to be horsewhipped and CHAP. driven from their homes, owing to the dread in which they hold a nation of stupid and cowardly Moslems. We should not have seen another Ligurian, if Antonio had not intercepted some of the fugitives, and pacified their fears, by telling them who the travellers really were; and that Englishmen would accept of nothing from their hands without an adequate remuneration. After this assurance, several times repeated, and a present being made to them of a few parås, we were conducted to what is called a Conák, or inn; but in reality a wretched Conák, or hovel, where horses, asses, and cattle ot every description, lodge with a traveller beneath the same roof, and almost upon the same floor. A raised platform about twelve inches high, forming a low stage, at one extremity of the building, is the part appropriated, to the guests; cattle occupying the other part, which is generally the more spacious of the two. Want of sleep makes a traveller little fastidious as to where he lies down: and fatigue and hunger soon annihilate all those sickly sensibilities which beset men during a life of indolence and repletion. We have passed many a comfortable hour in such places: and when, instead of the Conak, we were invited.

CHAP. to the cleanly accommodation offered beneath VII. the still humbler shed of an *Albanian* peasant, the night was spent in thankfulness and luxury.

> Here, as at Epiåda, the coins which were brought to us, as antient medals, were evidently Venetian : some of them had this legend, ARMATA . ET . MOREA . but without any date. The Ligurians, like the inhabitants of Epiada, amused us with traditionary stories of Asclapius, considering him as a great king who had once reigned in Epidauria. Immense plants of the Cactus Ficus Indica flourished about this place. We set out for the sacred seat of ÆsculAPIUS, at sun-rise. The Ruins are situate an hour's distance from Ligurio, at a place now called JERO, pronounced Yéro, which is evidently a corruption of Iseov (sacra ædes). Chandler converted this word Jéro into Gérao, which is remarkable, considering his usual accuracy. Our friend Sir W. Gell, who was here after our visit to the spot, and has published a description and plan of the Ruins', writes it Iero, as being nearer to the original appellation. . Circumstances of a peculiar nature have conspired

(1) Itinerary of Greece, p. 103. Lond. 1810.

LIGURIO.

to render these Ruins more than usually in- CHAP. teresting. The remains, such as they are, lie as they were left by the antient votaries of the god: no modern buildings, not even an Albanian hut, has been constructed among them, to confuse or to conceal their topography, as it generally happens among the vestiges of Grecian cities: the traveller walks at once into the midst of the consecrated Peribolus, and, from the traces he beholds, may picture to his mind a correct representation of this once celebrated wateringplace-the Cheltenham of ANTIENT GREECE-as it existed when thronged by the multitudes who came hither for relief or relaxation. Until within these few years, every vestige remained which might have been necessary to complete a plan of the antient inclosure and the edifices it. contained². The Ligurians, in the time of Chandler, remembered the removal of a marble chair from the theatre, and of statues and inscriptions which were used in repairing the fortifications of Nauplia, and in building a mosque at

(2) Sir W. Gell, from the remains existing at the time of our visit to the place, afterwards completed a very useful Plan, as a Guide for Travellers, both of the inclosure and its environs : this was engraved for his "Itinerary of Greece." See Plate facing p. 108 of that work. Lond. 1810.

VII.

Argos'. The discovery of a single marble chair, CHAP. either within or near to almost every one of the celebrated theatres of Greece, is a circumstance of a Greck that has not been sufficiently regarded by those who are desirous to illustrate the plan of these We afterwards found a antient structures. relic of this kind at Chæronea, near to the theatre; whence it had only been moved to form part of the furniture of a Greek chapel: another has been already noticed in the description of Athens; and the instances which have been observed by preceding travellers it is unnecessary now to enumerate. These chairs, as they have been called, have all the same form; consisting each of one entire massive block of white marble, generally ornamented with fine sculpture. Owing to notions derived either from Roman theatres, or from the modern customs of Europe, they have been considered as seats for the chief magistrates; but even if this opinion be consistent with the fact of there being one Cathedra only in each theatre, it is contrary to the accounts given of the places assigned for persons of distinction in Grecian

(1) See Trav. in Greece, p. 226. Oxf. 1776.

Cathedra

Theatre.

LIGURIO.

theatres, who were supposed to have sate in the Bouleuticon; that is to say, upon the eight rows of benches within the middle of the (Koikov) Cavea of the theatre, between the eighth and the seventeenth row². How little beyond the general form of a Greek theatre is really known, may be seen by reference to a celebrated work in our own language', written professedly in illustration of the "Antiquities of Greece." Yet this author, upon the subject of the Aoyeiov, or Ouperan, commonly translated by the word *pulpit*, states, distinctly enough, that it stood in the middle of the orchestra⁴; which, as far as we can learn, is nearly the spot where these marble relics have been found: hence a question seems to arise, whether they

(2) This is the part of a Greek Theatre assigned for the $\beta_{ou}\lambda_{iu}$ by Guilletiere, (see p. 259, Ch. IV. of this Volume,) who has founded his observations upon a careful comparison of the accounts left by the Antients with the actual remains of the theatres themselves. But Potter, and, after him, other authors who have written upon Greciun Antiquities, consider the lowest part of the conton as the place appropriated to the scats of the magistrates; which agrees with a custom still retained in some countries, especially in Sweden. In the theatre at Stockholm, the King and Queen sate, in two chairs, in the pit, in front of the orchestra. For the $\beta_{ou}\lambda_{iu}$ the Reader is referred to Aristophanes, and to Julius Pollux, lib. it, c. 19.

were not intended, each as a conspicuous place in the orchestra of the theatre to which it belonged, for the better exhibition of those performers who contested prizes upon any musical. instrument, or were engaged in any trial of skill, where one person only occupied the attention of the audience. The sculpture upon. one of them, as thrice represented in the third volume of Stuart's Antiquities of Athens', seems to favour this idea of their use: because its ornaments are actually those prizes which were bestowed upon successful candidates; a vessel of the oil produced by the olive-tree that grew. in the Academia; and three wreaths, or chaplets, with which victors at the Panathenæa were crowned.

Coroni.

Proceeding southward from Ligurid, we soon arrived at a small village called Coroni^e, whose

(1) See Stuart's Athens, vol. III. pp. 19, 29. "Whether they have been scats for a magistrate in a court of judicature, or of officers in a Gymnasium, is not easily determined from their situation." *Ibid.* p. 25. Lond. 1794.

(2) "Possibly an antient name taken from the Nymph Coronis, the mother of *Æsculapius.*" (Gell's llinerary of Greece, p. 103. Lond. 1810.) It were to be wished that this industrious traveller would complete the design originally announced by the appearance of this publication, and extend it to the rest of Greece, all of which has been visited

inhabitants were shepherds. Here we noticed a noble race of dogs, similar to the breed found in the province of Abruzzo in Italy; and it is somewhat singular that the very spot which still bears an appellation derived from the name of the mother of *Æsculapius* should be now remarkable for the particular kind of animal materially connected with his history." It was a shepherd's dog who guarded the infant god, when exposed upon Mount Titthion'. We bought a young one, for ten piastres, of great size and beauty. It resembled a wolf, with shining black hair. To complete all the circumstances of analogy, they had given to it the name of Kogázı, as if in memory of the zogaz which Apollo set to watch Coronis after she became pregnant. Coráki proved a useful companion to us afterwards; as he always accompanied our horses, and protected us from the attacks of the large dogs swarming in the Turkish

visited and accurately surveyed by him. Such a work, to use his own words, "although it be only calculated to become a book of reference, and not of general entertainment," would be really useful; and its value would be felt, if not by an indolent reader at his fire-side, yet by the active and enterprising scholar, who wishes to be guided in his researches throughout these interesting regions.

(3) A shepherd's dog was represented as an accompaniment to the statue of the God, of ivory aud gold, in his temple.

CHAP. VII.

CHAP. towns and villages, and constantly assailing a VII. traveller upon his arrival: indeed, sometimes it became a question with us, whether Ibrahim or Coráki were the most intelligent and useful Tchohadar.

The Hieron.

At Coroni, turning towards the east, we had the first sight of the HIERON. Its general disposition may have been anticipated by the Reader, in the description already given of the features of Epidauria. It is a small and beautiful Mountains. valley, surrounded by high mountains; one of superior magnitude bounding the prospect on its eastern side. This, from its double summit, consisting of two rounded eminences, may be the mammillary mountain, thence called TITTHION, by Pausanias', from 71780; which word, among a great variety of other instances proving the common origin of the two languages^e, we have retained in our word teat;

(2) The nation from whom the Greeks were descended, and the ancestors of the English, spoke dialects of the same language. The numberless proofs that might be adduced of this, are foreign to the object of this publication ; but, as to an authority for the common origin of the two colonies, the author is proud to refer to his Grandfather's learned work on "the Connection of the Roman and Saxon Coins ;"

^{(1) &}quot;Oen de sion unie to aloos, to te TITOIOT, and Ereen inoualousnon Kuvégrion, Malsárou de Arollavos isgon in auro. Pausan. Corinth. c. 27. pp. 174, 175. Lips. 1696.

HIERON. -

now becoming obsolete. In this valley were the sacred grove', and Sanctuary of Æsculapius, together with numerous baths, temples, a Stadium, a Theatre, and some medicinal springs and wells; the remains of all which may still be severally discerned. The first artificial object that appeared after we left Coroni, was a considerable Ruin, somewhat resembling a castle, at a short distance in the valley upon our right. Upon closer inspection, it proved to be a Roman edifice of brick-work, and of a square form; possibly one of the benefactions of Antoninus Pius, who, while a Roman senator, erected here an hospital for the reception of pregnant women and dying persons, that were before always removed out of the Peri*bolus*⁴, to be delivered, or to expire in the open air. Farther on, we perceived the traces of a large building, divided into several chambers, and stuccoed; and it is known that the same senator also built the Bath of Æsculapius, besides

Coins;"—a work that was highly prized by the greatest Grecian scholar England ever had; namely, the illustrious Porson; whose frequent illustrations and evidences of the fact here alluded to are recent in the recollection of all who knew him.

making other donations. We soon came to what we supposed to have been the groundplot of the Temple: its remains are seen only at one extremity, but the oblong plane upon which this immense fabric stood is clearly marked out by the traces of its foundations. We had no sooner arrived, than we were convinced that the time we proposed to dedicate to these Ruins would by no means prove adequate to any proper survey of them: we found enough to employ the most diligent traveller during a month, instead of a single day. Near to the temple is the Stadium; and its appearance illustrates a disputed passage in Pausanias', for it consisted principally of high banks of earth, which were only partially covered with seats. We observed here a subterraneous vaulted passage, now choked with rubbish, which conducted into its area², on the left side of it, and near to the principal entrance. This Stadium has fifteen rows of seats; but the seats are only at the upper end of the structure: the rest is of earth, heaped so as to form its sides. The

Theatre is farther on towards the mountains, on the right hand; and it is one of the most remarkable in all Greece; not only from the state in which it remains, but in being mentioned by Pausanias as a work of POLYCLETUS, renowned for excelling all other architects in the harmony and beauty of his structures?. We found a subterraneous building, resembling a small chapel, without being able even to conjecture for what purpose it was constructed, unless it were for a bath. Near to it we saw also a little stone coffin, containing fragments of terra-cotta vases: it had, perhaps, been rifled by the peasants, and the vases destroyed, in the hope of discovering hidden treasure. But the most remarkable relics within the sacred precinct were architectural remains in terra cotta. We Architecdiscovered the ornaments of a frieze, and part cottas. of the cornice of a temple, which had been manufactured in earthenware. Some of these ornaments had been moulded for relievos; and others, less perfectly baked, exhibited painted surfaces. The colours upon the latter still retained much of their original freshness: upon

tural Terra

CHAP. VII.

being wetted with water, they appeared as vivid as when they were first laid on; resembling the painted surfaces of those "pictured urns" (as they were termed by our English Pindar) upon which it is now usual to bestow the appellation of " Grecian vases." The wonderful state of preservation manifested by the oldest painted terra cottas of Greece has been supposed to be owing to the circumstance of their remaining in sepulchres where the atmospheric air was excluded : but these ornaments were designed for the outside of a temple, or tomb, and have remained for ages exposed to all the changes of weather, upon the surface of the soil. In the description before given of the Memphian Sphinx, another striking example was adduced, proving through what a surprising lapse of time antient painting has resisted decomposition : and if the period of man's existence upon earth would admit of the antiquity ascribed by Flato to certain pictures in Egypt, there would have been nothing incredible in the age he assigned to them¹. The colours upon these terra cottas were a bright straw-yellow and red. The building to which they belonged is mentioned by Pausanias:

⁽¹⁾ See p. 205, Chap. IV. of the former Volume. "The walls of great edifices," says Pauw, (ibid. p. 208,) "when once painted, vemained so for ever."

HIERON.

and to increase the interest excited by the CHAP. discovery of these curious remains, we found the same passage of that historian cited by Winkelmann, to prove that such materials were used in antient architecture². After describing the Theatre, the Stadium, and other edifices, Pausanias' adds': "The Hieron once contained a portico (oroà), called that of Cotys; but the roof falling in, caused the destruction of the whole edifice, owing to the nature of its materials, which consisted of crude tiles."

We then went, by an antient road, to the top of a hill towards the east; and found upon the summit the remains of a temple, with steps leading to it yet remaining: there is reason to believe this to have been the Temple of the Coryphæan Diana, upon Mount Cynortium, from Temple of the circumstance of an Inscription which we dis- phean covered upon the spot. It is imperfect; but it mentions a priest of DIANA, of the name of Apotatilius, who had commemorated his safety from some disorder:

the Cory-Diana.

By the side of this temple there was a bath, or reservoir, lined with stucco, thirty feet by eight, with some lumachella columns of the Doric order: the foundations and part of the pavement of the temple yet exist, and these are not less than sixty paces in extent: we noticed some channels grooved in the marble, for conveying water in different directions. The traces of buildings may be observed upon all the mountains which surrounded the sacred valley; and over all this district their remains are as various as their history is indeterminate. Some of them seem to have been small sanctuaries, like chapels; others appear as baths, fountains, and aqueducts. The Temple of the Coryphæan Diana is mentioned by Pausanias'; and being identified with this ruin, it may serve to establish a point of observation for ascertaining the edifices described by the same author as in its neighbourhood. It was upon the summit of

CYNORTIUM; and had been noticed by Telesilla, in her poems. We next came to a singular and very picturesque structure, with more the Apollo. appearance of a *cave* than of a building. It was covered with hanging weeds, overgrown with bushes, and almost buried in the mountain: the interior of it exhibited a series of circular arches, in two rows, supporting a vaulted roof; the buttresses between the arches being propped by short columns. Possibly this may have been the building which Chandler, in his dry way, called "a Church," without giving any description of it; where, besides fragments, he found an Inscription to far-darting "Apollo"." He supposes the Temple of Apollo which was upon Mount Cynortium to have stood upon this spot.

Below this mountain, by the northern side of Circular a water-course, now dry, and rather above the spot where it discharged itself into the valley, is a small building of a circular form, covered by a dome, with arches round the top. We found a few imperfect Inscriptions, one of which mentions Hierophants, or Priests of Mars,

(2) See the Vignette to this Chapter. The arches may be as old as the time of Pausanias. The Inscription mentioned by Chandler is as follows: "Diogenes the hierophant, to far-darting Apollo, on account of a vision in his sleep." Trav. in Greece, p. 225. O.f. 1776.

Edifice.

CHAP. ($\Pi ug \varphi \circ g \circ u$,) dedicating some votive offering. VII. All that we could trace were these letters :

Ι Α Ρ Ε Φ Α Ω Ν Γ Υ Ρ Φ Ο Ρ Ο Α Ν Ε Θ Η Κ Α

The circular building is too modern in its aspect, and too mean in its materials, for the THOLUS of Pausanias¹, of white marble, built by Polycletus, architect of the theatre; but it may, perhaps, correspond better with the fountain which he alludes to, as remarkable for its roof and decorations²; this kind of roof being almost unknown in Greece. The building, although smaller, bears some resemblance to the wellknown bath, improperly called the Temple of Venus at Baiæ.

Theatre of Polycletus.

Hence we repaired to the *Theatre*, now upon our *left* hand, but upon the *right* to those entering the *Hieron* from *Coroni*, that is to say, upon its *southern* side³. *Chandler* speaks of its

"marble seats" as "overgrown with bushes":" those seats, according to our Notes, consist of common limestone; a difference of little moment: but as we paid particular attention to the dimensions and figure of this splendid structure, one of the most entire of all the Grecian theatres, and in its original and perfect state one of the most magnificent', so we shall be very particular in giving an account of it. We found it tenanted by a variety of animals, which were disturbed at our approach,-hares, red-legged partridges, and tortoises: our new acquaintance Coráki, accompanied by his former master, a descendant of the goatherd Aresthanas, bounded among the seats, and, driving them from their haunts, soon put us into sole possession. But an animal of a very different nature was dragged from his lurking-place by Mr. Cripps;

Egor. (1bid.) This expression of Pausanias, "Within the Hieron," or sacred precinct, has been by some preposterously rendered "Within the Temple." A Theatre WITHIN A TEMPLE !!!

(4) Trav. in Greece, p. 235. Oxf. 1776.

(5) This is evident from the manner in which it is always mentioned by Pausanias, who speaks of the comparative magnificence and architectural skill shewn in other theatres, with reference to this of Polycletus in Epidauria. Thus, when he is giving an account of a theatre in Ægina, he says of it, Θίατεόν ἐστι δίας ἔζιου, κατὰ τὸ Ἐπιζαυρίων μάλιστα μύγιδος καὶ ἰργασίαν τὴν λοιπήν. Pausan. Corinth. c. 29. p. 180. Epidaurian Serpent.

who, delighted by the discovery he had made, came running with an extraordinary snake which he had caught among some myrtles, and held writhing in his hands. It was of a bright yellow colour, shining like burnished gold, about a vard in length, such as none of us had seen before. The peasants, however, knew it to be a species of harmless serpent, which they had been accustomed to regard with tenderness, and even with superstitious veneration; telling us it would be unlucky in any one who should do it injury. It was, in fact, one of the curious breed described by Pausanias, as peculiar to the country of the Epidaurians, being always harmless, and of a yellow colour'. We could not, however, assist Mr. Cripps in its preservation; no one of our party being able to divest himself sufficiently of a very common antipathy for serpents: and the consequence was, that being unwilling to put it to death, and the peasants wishing for its release, he suffered it to escape.

Aspect of the Coilon. The Colon of this theatre, as usual, has been scooped in the side of a mountain; but it faces the north. As the sea could not enter into the

perspective, which seems to have been a CHAP. VII. general aim of the architects by whom such structures were planned throughout Greece, this position of the theatre may have been designed to afford it as much shade as its: situation was capable of receiving. Its northern aspect, and the mountain towering behind it, must have protected the whole edifice, during a great portion of the day, from the beams of the sun; and we may suppose this to have been a consideration, rather than any circumstance of expediency as to the mountain itself, because the whole circumference of the Peribolus afforded declivities' equally well adapted to the purpose of constructing a theatre; and it is also well known that the Greeks were frequently obliged to carry umbrellas (σκιάδια) with them into their theatres : submitting to their incumbrance, rather than remain exposed to the sun's rays. The women upon such occasions were also attended by their umbrella-bearers (oziadnoveoi); and this custom, from the increase it occasioned in the throng, added to the embarrassment caused among the audience by the number of umbrellas intercepting the view of the stage, must have rendered a shaded theatre a very desirable

(2) Ælian. Hist. Var. lib. vi. c. 1. Lips. 1780.

acquisition. Indeed, we know that, upon some-CHAP. occasions, temporary sheds and large awnings were erected for the convenience of the spectators, Every provision of this kind was doubly necessary in the Hieron; by its nature sultry, owing to its surrounding mountains, and filled with inhabitants selected from all the invalids of Greece,-the feeble, the enervated, the effeminated votaries of the God,-vainly seeking in these retreats a renovation of exhausted nature; or aged and infirm persons, anxiously looking for some gleam of cheerfulness, wherewith to gladden the termination of a career that knew no hope beyond the grave. It is evident that the disposition of this popular place of amusement was arranged with luxury as well as convenience; for, in addition to the shade it offered, the salutary waters of the HIERON flowed in the deep bed of a torrent immediately beneath its front¹. With regard to the theatre itself, the Scene, or, as it has been sometimes improperly called, the Proscenion², has totally

> (1) It is impossible to multiply the number of engravings so often as the insufficiency of a written description renders their aid requisite; but the Reader is particularly referred to a view of this Theatre, of the torrent's course, which is now dry, and of the whole Hieron, as engraved from a drawing made upon the spot by Sir W. Gell. See Itinerary of Greece, Plate 22. p.104. Lond. 1810.

(2) This name applies only to the Stage of a Greek Theatre.

HIERON.

disappeared; and as it was here that Polycletus probably exhibited the greatest proof of those architectural talents so highly extolled by Pausanias, the loss of it is to be regretted: but such is the entire state of the structure within the Coilon, that none of the seats are either Perfect missing or imperfect. Owing to their remark- state of the structure. able preservation, we were enabled to measure, with the greatest accuracy, the diameter of the Conistra, and the dimensions of all the parts appropriated to the spectators. There is something remarkable even in the position of the seats: their surface is not perfectly horizontal; the architect has given to them a slight inclination, perhaps that water might not rest upon them during rain. The section of these seats would exhibit a profile of this kind:

CHAP. VII.

16 inches. VOL. VI.

14 inches.

18 inches.

ΕE

CHAP. VII.

Dimensions and Detail of the Parts.

By a simple contrivance, which is here visible, the seats of the spectators were not upon a level with the places for the feet of those who sate behind them; a groove, eighteen inches wide, and about two inches deep, being dug in the solid mass of stone whereof each seat consisted. expressly for the reception of the feet; and this groove extended behind every row of spectators; by which means their garments were not trampled upon by persons seated above them. The width of each seat was fourteen inches, and its perpendicular elevation sixteen inches. The number of the seats, counted as steps from the Conistra or Pit, to the top of the Coilon, was fifty-six 1: in the same direction from the Pit, upwards, the semicircular ranges of the seats were intersected at right angles by above twenty flights of little stairs; each flight being twenty-eight inches and a half wide, and each step exactly half the height of one of the benches: these, crossing the several rows from the Pit upwards, enabled persons to ascend to the top of the theatre, without incommoding the spectators when seated. Guilletiere, speaking of such stairs, says, that near to them were

(1) Sir W. Gell says fifty-five.

HIERON.

passages leading to the outer porticoes, by CHAP. which the spectators entered to take their places². He seems to have founded this notion upon the plan of a Roman theatre, the view of which he has given in his work³. We do not remember ever to have seen in Grecian theatres any such retreats or entrances, near to the little stairs for crossing the benches : the entrances to a Greek theatre were either vaulted passages at the sides, near to what we should call the stage-boxes, or in the exterior front of the Scene, behind the stage itself⁴. Many authors speak of those porticoes, as being erected behind the Cavea; which, as applied to the theatres of Greece, is ridiculous'; for what can be more absurd than to tell of buildings behind seats which were either integral parts of a mountain, or were adapted to its solid surface. The porticoes to which the audience retired for shelter, in rainy weather, must have had a different

CHAP. situation. The whole of the Coilon, or Cavea, - that is to say, of the seats taken altogether, was separated into two parts, an upper and a lower tier, by a diazoma or corridor, half way from the top, running parallel to the rows of seats; and in this, as upon a platform, there was space from one extremity of the circular arch to the other. The two parts of a theatre, thus separated, are perhaps all that Vitruvius intended by the "two distinct elevations of the rows of benches," which Guilletiere complained of being unable to reconcile with anything now remaining of antient theatres¹. The diameter of the Conistra, or Pit, taken in the widest part, is one hundred and five feet; but as the circular arch of the Theatre is greater than a semicircle, the width of the orchestra, that is to say, the chord of the arch, is barely equal to ninety feet². Facing the Theatre, upon the opposite bank of the bed of the torrent before mentioned, are the foundations of an edifice of considerable size : but it were endless to enumerate every indistinct

(2) Sir W. Gell states it as equal to eighty-nine feet. See Itin. of Greece, p. 108. Lond. 1810.

420

⁽¹⁾ See p. 507, Chap. IV. of this Volume.

trace of antient buildings within this celebrated valley; nor would such a detail afford the smallest satisfactory information. With the description of the Theatre we shall therefore conclude our observations upon the HIERON; hoping that nothing worthy of notice has been omitted, respecting one of the most perfect structures of the kind in all Greece.

We returned by the way of Coroni; and near Journey to to Ligurid took a western course in the road leading towards Nauplia, the antient port of Argos'. After journeying for about an hour, through a country resembling many parts of the Apennines, we saw a village near the road, with a ruined castle upon a hill, to the right, where the remains of Lessa are situate. This Lessa. village is half way between Ligurid and Nauplia; and here was the antient boundary between Epidauria and the Argive territory⁴. Those Ruins have not yet been visited by any traveller: indeed, there is much to be done throughout Argolis : this country particularly merits

Dorian and Egyptian Antiquities.

CHAP. VII.

investigation. The antiquities that occurred in our route were principally of a sepulchral nature, near to the antient road leading from Nauplia towards Lessa and Epidaurus; but so peculiarly characterized, as to form and structure, that it is evident they were the works of the earliest colonies in Peloponnesus, and probably of Dorian origin. One of these monuments is decidedly mentioned by Pausanias, as we shall presently shew; the only author to whom we can refer for information concerning this part of the PELOPONNESUS. Strabo makes but few remarks upon the Argive territory; and even these are delivered from the observations of Artemidorus and Apollodorus; not having himself visited the spot'. We passed some tombs that were remarkable in having large rude stones, of a square form, placed upon their tops; a custom alluded to by Pausanias in the description he has given of the tumulus raised by Telamon upon the shore of Ægina, near to the Æacéum. The $(\chi \tilde{\omega} \mu \alpha)$ heap had upon the top of it (Nillos reaxis) " a rugged stone," once used, according to a tradition in the second century, by Peleus and Telamon, as a discus, with which

ARGOLIS.

Peleus slew Phocus, during a game of quoits². It CHAP. has been a common notion everywhere, that antient heroes were men of gigantic stature. The fable, therefore, as related to Pausanias by the Æginetans, is of little moment; but the fact of a stone so placed is sufficient to prove that such a substitute for the Stélé was found upon a Dorian tumulus of very remote antiquity; and the observation of the historian is in some measure confirmed by the existence of similar tombs in Argolis corresponding with his description of the mound in Ægina; the Dorians having possessed this island and the Argive territory nearly twelve centuries before the Christian æra: at that time the Peloponnesus was the principal seat of their power, and by them the city of Megara was then founded. Upon the left-hand side of the road we also observed an Egyptian sepulchre, having a pyramidal shape; and agreeing so remarkably, both as to form and situation, with a monument mentioned by Pausanias, that we believed ourselves to be actually viewing the identical tomb seen by him³. He supposes the traveller coming in a

contrary direction from the line of our route; that is to say, from Argos towards Epidauria; and in so doing he describes a pyramidal structure as being upon the right of the observer. It contained, he says', shields of an Argolic form; for a battle had once been fought in the place, between the armies of Prætus and Acrisius, upon which occasion shields were first used, and those who fell on either side were here buried in one common sepulchre. However, he is evidently describing a sepulchre nearer to Argos; for he adds, that upon quitting the spot, and turning towards the right hand, the Ruins of Tiryns appear²: therefore the pyramidal form may have been common to many antient sepulchres in ARGOLIS. Lessa was but a village in the time of Pausanias', as it now is: but it was remarkable for a temple and wooden image⁴ of Minerva; and upon the mountain above the village, perhaps where the castle now stands, there were altars of Jupiter and Juno, whereon sacrifices were offered in times of drought'.

ARGOLIS.

The mountain then bore the name of Arachnæus: CHAP. its antient appellation, under Inachus, had been Sapyselatón⁵.

During this part of our journey, the more distant mountains of the Morea appeared extremely lofty, elevating their naked summits with uncommon sublimity. The road led through a mountain pass that had been strongly fortified. We saw everywhere proofs of the fertility of the soil; in the more open valleys, plantations of pomegranate and mulberry trees; and even amidst the most rocky situations, there sprouted myrtles, beautiful heaths, and flowering shrubs, among which sheep and goats were browsing in great number. We met several herds upon the road, each herd containing from seven to nine hundred head of cattle. As we drew near to the sea-side, we passed a very extensive plantation of olive-trees; and came to an antient paved road, leading from Nauplia towards Argos the once-renowned capital. Sepulchres. as old as the age of Danaus, appeared among the rocks before we reached the town. Strabo assigns to them even an earlier date; he

(6) Zarveslárav. Ibid.

CHAP. VII. Cyclopéa.

Nauplia.

says they were called Cyclopéa, as having been the work of the Cyclops'; it being usual to attribute to a race of men who, from their power, were considered by after-ages as giants, any result of extraordinary labour². The beauties of the scenery, and the interesting nature of the country, had detained us so long, that we did not reach NAUPLIA until the gates were shut'; and there was no possibility of causing a request to be conveyed to the Governor for their being opened; neither would any attention have been paid to such our petition, if it had been made. The worst of the scrape was, that all our beds and baggage, being with the sumpterhorses and guides, had already entered the town before the gates had been closed. There seemed, therefore, to be no other alternative, but that of ending a long day of entire fasting without any hope of nourishment, and with

the certainty of passing the rest of the night CHAP. houseless in the suburbs of Nauplia. After some time, the Tchohadar found a miserable shed, whose owner he compelled to provide a few boards for us to sit upon; but neither the offers of money, nor Ibrahim's boasted resource of flagellation, from which we found it almost impossible to restrain him, availed any thing towards bettering either our lodging or our fare. Weary, cold, and comfortless, we remained counting the moments until the morning; without fire, without light, without rest, without food : but the consciousness of being upon terra firma, and that we were not exposed, as we had often been, under circumstances of equal privation, to the additional horrors of a tempestuous sea, made our situation comparatively good, and taught us to be thankful.

As soon as day-light appeared, the worthy Consul, Mr. Victor Dalmar, who had received our baggage, and was uneasy for the safety of his expected guests, caused the gates to be opened rather earlier than usual⁴. The

(4) "The Turks suspend a sabre over the gateway, as a memorial that the place was taken by assault." Squire's MS. Correspondence.

CHAP. VII.

Governor, to whom he had made application, sent orders to the gate, desiring to see us. We begged to decline this honour, pleading our fatigue and indisposition as an apology for not waiting upon him; but sent the Tchohadar, as our representative. Ibrahim, having put on his fur pelisse, and a fine tall calpack with a turban of white muslin, looked like a Vizir, and quite as respectable as any Pasha of three tails throughout the Grand Signior's dominions. When we arrived at the Consul's house, we found sitting in a little hot close room smelling most unpleasantly of stale tobacco fumes, a short corpulent man about fifty years of age, who began talking to us very loud, as people often do with foreigners, believing them to be deaf: he announced himself to us as our host; and, from the appearance of everything around him, we expected indifferent accommodation. House of the Consul. In this, however, we were mistaken: we were shewn to some rooms lately whitewashed; the chambers of the Consul's house, as usual, surrounding a court, and communicating with each other by means of a gallery. In these rooms there was not a single article of furniture; but they were clean, and we were able to spread our matrasses upon the floor; and soon found ourselves comfortably lodged in as

NAUPLIA.

hospitable a mansion as any in all Greece; our benevolent host contriving everything for our welcome, and endeavouring to prolong our stay as much as possible. After we had taken a little rest, we were roused by the firing of Turkish cannon in the Citadel; and Ibrahim, returning from his mission, brought the Governor's message to the Consul, informing him that he had just received from Stambôl (Constantinople) intelligence of the expulsion of the French from Egypt; and that he had orders from his Government to make it publickly known. We were shewn a copy of the Takhrir, Turkish or official note, the only Turkish Gazette we had ever seen, announcing an event nearly a quarter of a year after it had happened. It was in manuscript, and Mr. Dalmar translated it for The nature of the intelligence was curious us. enough: it set forth, after a long pompous preamble, that " public rejoicings were to be held throughout the Ottoman Empire, for the deliverance of (Misr) Egypt from the hands of cursed Infidels forsaken of God, owing to the bravery and prudence of Hussein Pasha and of the troops belonging to the Sublime Porte of solid glory, led on by their great - Prophet," Sc. Sc. The only mention made of any obligation to Great Britain was tagged on in the form of a postscript, merely stating that "English

429

CHAP. VII.

Djowrs (Infidels) had acted friendly upon the occasion." Thus the deliverance of Egypt, purchased at the price of British blood, and for which Abercrombie died, throughout the immense empire of Turkey was ascribed to a dastardly banditti, who were idle spectators of the contest, encumbering rather than aiding the operations of our armies.

Public Rejoicings.

Athleta.

The rejoicings at Nauplia began immediately: they consisted of an irregular discharge of small artillery most wretchedly managed, and the exhibition of athletic sports before the Governor's windows; followed afterwards by a few bad fireworks, displayed without any effect, by daylight. The Athletæ were principally wrestlers. We saw two of them advance into the arena where the combat was to take place: they came hand in hand, capering and laughing as if highly gratified by the opportunity of shewing their skill: presently they put themselves in various attitudes, and began to make faces at each other. These men afforded a perfect representation of the antient $\Pi \alpha \lambda \dot{\eta}$, the oldest of all the exercises ¹. They wore tight leather

(1) Even the origin of its name, ITali, is uncertain. Virgil derives the exercise from the Trojans, *Æn. lib.* iii. 280.

430

CHAP.

NAUPLIA.

breeches, well soaked in oil; in other respects their bodies were stark-naked, except being anointed with oil², and rubbed over with dust³. To gain the victory, it was necessary not only that one of the combatants should throw the other, but that, having thrown him, he should be able to keep his adversary lying upon his back until he, the conqueror, regained his feet; for in the struggle they always fell together'. We had also the satisfaction of seeing that most antient military dance the Pyrrhica. Pyrrhica, as it had perhaps existed in Greece from the time of its introduction by the Son of Achilles, or by the Corybantes. In fact, it was a Spartan dance, and therefore peculiarly appropriate at a neighbouring Nauplian festival. It consisted of men armed with sabres and shields, who came forward in a kind of broadsword exercise, exhibiting a variety of martial

(2) " Exercent patrias oleo labente palæstras Nudati socii."----Ibid. 281.

(4) The same rule, according to Mr. Thornton, is observed in other parts of Turkey. (See Thornton's Turkey, vol. II. p. 207. Lond. 1809.) In antient wrestling, the prize was obtained by throwing an adversary three times.

431

CHAP. VII.

CHAP. VII. evolutions, to the sound of *Turkish* flutes. Such amusements and customs are never likely to be discontinued in any country, so long as any portion of the original inhabitants remains: indeed, they often continue to exist when a new race has succeeded to the old inhabitants; being adopted by their successors¹.

Population.

Bad Air.

The population of *Nauplia* consisted of two thousand persons, at the time of our arrival. The plague had raged during three successive years, and had carried off six thousand of its inhabitants. When free from this scourge, it is a very unhealthy place, the people being attacked annually with a *malaria* fever. The few merchants who reside here have generally country-houses, and leave the town in the summer months. The night we had passed in the suburb exposed us to an attack of this kind; the author having caught the fever, and all our party being in a certain degree affected by the unwholesome air. The only remedy is the red *Peruvian bark*; but it must be administered in

(1) All the invasions and conquests to which our island has been liable, during nineteen centuries, have not abolished the rites of the *Misletoe*: and some of the games of the earliest inhabitants of *Great Britain* are still practised in the country.

very powerful doses. A traveller in Greece should consider this medicine as absolutely necessary to his existence, and never journey unprovided². The commerce of Nauplia has Commerce been for some time upon the decline. The exports are, oil, spunges, and wine. Formerly, the produce of the Morea for exportation, in the first of these articles alone, (and almost all of it went from Nauplia,) amounted, in a good year, to one million of Turkish quilots : even now, if the crops have not been deficient, the produce of Corinth, Misitra, Nauplia, Argos, &c. is sufficient for the freightage of twenty-five vessels. A barrel of fine oil sells here for twenty-six or twenty-eight piastres; each barrel containing forty-eight okes. The other exports of the Morea, from this port, are Velani acorns, vermilion, and wine, of which a great quantity is made, the soil of the Peninsula being particularly favourable to vineyards. The people of Nauplia were early renowned for the cultivation of the vine: they formerly worshipped, as an idol, an ass's head; because that animal, by browsing the

(2) Perhaps the arsenic solution, called " tasteless ague drops,' might prove even a more potent remedy; and it would be more. portable, owing to the small quantity of arsenic necessary in its preparation.

VOL. VI.

433

vines, taught them the art of pruning¹. Very excellent oil is made at Mitylene, whence a considerable quantity comes to Nauplia to be exported. They receive also from Misitra forty or fifty thousand okes of silk; and this is of three sorts or qualities : the finest is called $(\dot{o}\psi \epsilon)$ Opse; the second sort, Karatch kemi litchi; and the third, Kassagico². There is, perhaps, no place in Greece where the antient medals of the country may be purchased in greater number, or found in a higher state of perfection, than at Nauplia. We obtained here the oldest silver medals of Corinth, of Argos, of Dorium, in Messenia, and of Ægina. Old Roman copper coins might be had, literally, by the handful. Silver medals of the Achaian League, with the head of Jupiter, laurelled, in front, and the monogram X on the obverse side, were very common. Upon the oldest Corinthian silver, the head of Pallas was represented, within an indented square; or the

(2) We cannot pretend to accuracy in writing these words; they are merely an adaptation of the letters of our alphabet to sounds, as they seemed to be uttered. The *Karatch* is a capitation-tax, levied upon *Greeks* and *Jews*; and possibly the second sort of *silk* may be the result of such a tax, taken in kind.

figure of a *flying Pegasus* with the wings curved $\underbrace{CHAP}_{VII.}$ towards the head, and beneath the animal the $\underbrace{Phcenician}_{verse sides, exhibited only the indented square, divided into four parts, with a grain in each.$

We had not seen any Gipsies since we left Gipsies. Russia; but we found this people in Nauplia, under the name they bear in Moldavia, of Tchinganehs. How they came hither, no one knew; but the march of their ancestors from the north of India to Europe, so lately as the beginning of the fifteenth century, will account for their not being found farther towards the south ; and this is now so well ascertained, that no one would expect to meet a Gipsy upon any of the southern shores of the Mediterranean. To have found them in the Peloponnesus is rather remarkable, considering that their whole tribe, at the first, did not exceed half a million; and this number has subsequently much diminished. Their progress towards this peninsula may have been through Bulgaria, Thrace, and the other northern parts of Greece, from Moldavia, Transylvania, and Wallachia, where they are numerous, and find employment in collecting gold from the . alluvial deposit of the rivers. Through the same countries they may have reached Asia Minor;

FF2

but we believe the *Morea* to be the utmost extent of their journey towards the *south*, since the period of their first migration¹.

The streets of Nauplia are as they probably existed in the time of Pausanias; narrow, dark, and dirty. It is mentioned both by Xenophon³ and by Euripides³; but its antient name of Nauplia is now corrupted by the Italians into Napoli di Romania. The high and abrupt mountain upon which the Acropolis is situate, still retains the name of the hero Palamedes, son of Nauplius, in the appellation Palamedi. There is nothing remarkable in the town itself, excepting its situation; and this, like the site of many other Grecian cities, borrows from Nature some of her grandest features, each disposition of them being at the same time distinguished by something peculiar to itself. Athens, Argos,

(1) Beaujour mentions them as forming part of the population of Salonica, under the name of TCHINGHÉNAIS. Tableau de la Comm. de la Grèce, tom. I. p. 53. Paris, 1800. It is said they are also seen in Spain.

Cities.

Features of Grecian

Nauplia, Corinth, and many more, had each their lofty citadel, with its dependent burgh, and fertile plain: in this they resembled each other; but in certain characteristics they all differ. ATHENS appears as a forsaken habitation of holiness: for a moment, unmindful of the degrading character of its Divinities, the spectator views with a degree of awe its elevated shrines, surrounded on every side by a mountain barrier, inclosing the whole district as within one consecrated Peribolus. ARGOS, with less of a priestly character, but equal in dignity, sits enthroned as the mistress of the seas: facing the sun's most powerful beams, she spreads her flowery terraces, on either side, before the lucid bosom of the waters in regal majesty. NAUPLIA. stretching out upon a narrow tongue of land, and commanded by impregnable heights, rich in the possession of her port, "the most secure and best defended in the Morea*," but depending always upon Argos for supplies, was fitted, by every circumstance of natural form, to become a mercantile city, and the mart of Grecian commerce. CORINTII, the Gibraltar of the Peloponnesus, by its very nature a fortress, is marked by every facility that may conduce to military

(4) Chandler's Travels in Greece, p. 227. Oxf. 1776.

CHAP. VII.

operations, or render it conspicuous for its warlike aspect. In every part of Greece there is something naturally appropriate to the genius and the history of the place; as in the bubbling fountains and groves of EPIDAURIA, sacred to Æsculapius; the pastoral scenes of ARCADIA, dedicated to the Muses and to Pan; the hollow rocks of PHOCIS, echoing to Pythian oracles; and perhaps the custom of making offerings to all the Gods, upon the summits of OLYMPUS and PARNASSUS. did not so much originate in any Eastern practice, as in the peculiar facility wherewith the eye commanded from those eminences almost every seat of sanctity in Greece1.

(1) The old Grecian custom of uttering the Kiess itinger ("Lord have mercy upon us !") and making sign of reverence upon coming in sight of any place of worship, is still retained among Greek Christians, but particularly in Russia: the Russians use the same expression. literally translated, "Ghospodi Pomilui!" As the practice enjoined reverence to every particular shrine, it must necessarily become a general homage to all the Divinities, when temples belonging to all the Gods were rendered visible at the same time, in the same manner as our Churches become conspicuous to the common people, who, in every Christian country, frequently employ themselves in counting them from the tops of their hills. Perhaps this 'may explain the beginning of those offerings to all the Gods which were made by the Antient Greeks upon the summits of their mountains; rather than the ridiculous notion of being nearer to their Divinities. The first temples were tombs; and these were not upon the tops of mountains, but in the plains

NAUPLIA TO TIRYNS.

On Wednesday, November the ninth, we left Nauplia, accompanied by the two sons of Mr. Dalmar, to visit the remains of TIRYNS^e, and thence proceed to Argos, Mycenæ, and Neméa, in our way to Sicyon and Corinth. The lofty Citadel of Palamedi towered above us, on our right hand. We passed several gardens, and some pleasing kiosks, or summer-houses, situate near the town. The walls of Tiryns are not Tiryns. more than an English mile and a half distant from Nauplia; or half, an hour, according to the Turkish mode of reckoning³. The sight of them, in a moment, carried our reflections back to the

plains below, near to the cities and public roads: therefore, by going to the summits of mountains, they, in fact, went *farther* from their Gods. This suggestion is, however, only made with reference to *Polytheism*, and to the nature of the offering: the worshippers of one God, as we learn from *Herodotus*, with regard to the *Persians*, who built no temples, chose the tops of the highest hills and mountains for their places of worship. (*Herodot. Hist. lib.i.*) Strabo also observes of them, that they had neither images nor altars, but paid their adoration upon some high place. (*Strabon. Geog. lib.* xv.) Cyrus having had a dream, forewarning him of 'his approaching death, sacrificed upon the summit of a mountain. (*Vid. Xenophon. lib.* viii.) The inhabitants of *Pontus* and *Cuppadocia* practised the same kind of worship. (*Appian. lib. de Bello Mithrid. p.* 366.)

Celtic and Phænician Architecture. most distant ages of history': we seemed, in fact, to be once more among the Ruins of Memphis. The coming of an Egyptian colony to this part of Peloponnesus, about fifteen centuries before our mera, is a fact attested by the highest authority of written testimony²; but there is something in the style of the architecture here, which, when compared with other remains of a similar nature, and added to a few historical facts, seems rather to prove it of Celtic, than of Egyptian origin. We purposely avoid entering into any detailed description of the dimensions of this gigantic building, because a most faithful delineator has already anticipated whatever we might have said upon the subject. To his work we must therefore refer the Reader'; merely

(1) It is said, by Strabo, Pausanias, and other historians, that the walls of Tiryns were built by the Cyclops, the same persons to whom Strabo ascribes the origin of the Nauplian Caves. Of the Cyclops nothing certain is known. They were supposed to be the sons of Calus and Terra; and this notion is enough to prove that all concerning their history is involved in fable. There were no less than three distinct races of men who bore this appellation. (Vid. Casaubon. Annot. in Strabon. lib.viii.) Some allusion to the builders of Tiryns will be again introduced, in the next Chapter.

(2) ΑΦ ΟΥ ΝΑΥΣ ΠΕΝΤΗΚΟΝΤΑ ΚΩΠΩΝ ΕΞ ΑΙΓΥΠΤΟΥ ΕΙΣ ΤΗΝ ΕΛΛΑΔΑ ΕΠΛΕΥΣΕ, κ.τ.λ.

stating of the walls of TIRYNS, that, with the exception of the interior structure of the Puramids of Egypt, a more marvellous result of human labour has not been found upon earth. The Celts have left in Great Britain a surprising specimen of the Cyclopéan style in architecture: and it may be said of their temple at Stonehenge, that it has all the marks of a Phænician building4: hence a conclusion might be deduced, that the Celts were originally Phoenicians, or that they have left in Phoenice monuments of their former residence in that country. If it be asked, in what region of the pean style.

e

Origin of the Cyclo-

(4) Stonehenge might be considered as a Phanician building, from its resemblance to the style of the architecture observed upon the eastern shores of the Mediterranean, added to the knowledge we have of Phanician settlements upon our south-western coasts: but the same kind of building exists in the northern parts of our island, and in Ireland, and may be noticed over all the territories of the Belgæ and Cimbri. Having accidentally alluded to this remarkable structure, it would be worse than mere omission to avoid noticing an observation concerning it by that learned antiquary R. P. Knight, Esq. as founded upon a fragment of the writings of HECATEUS. "From a passage of Hecatæus, preserved by Diodorus Siculus, I think it is evident that Stonekenge, and all the other monuments of the same kind found in the North, belonged to the same religion which appears, at some remote period, to have prevailed over the whole Northern hemisphere. According to the same historian, the Hyperboreans inhabited an island beyond Gaul, as large as Sicily, in which Apollo was worshipped in a circular temple considerable for its size and riches."

CHAP. VII.

History of Tiryns.

globe a taste originated for the kind of architecture termed, by the Greeks, Cyclopéan', perhaps the answer may be, that it was cradled in the caves of India; for many of these, either partly natural, or wholly artificial, whether originally sepulchres, temples, or habitations, it matters not, are actually existing archetypes of a style of building yet recognised over all the western world, even to the borders of the Atlantic ocean: and the traveller who is accustomed to view these Cyclopéan labours, however differing in their ages, beholds in them, as it were, a series of family resemblances, equally conspicuous in the caverns of Elephanta, the ruins of Persepolis, the sepulchres of Syria and of Asia Minor, the remains of the most antient cities in Greece and Italy, such as Tiryns and Crotona, and the more northern monuments of the Celts, as in the temples called Druidical; especially that of Stonehenge, in the south of England. The destruction of Tiryns is of such remote antiquity, that its walls existed, nearly as they do at present, in the earliest periods of Grecian history. Ælian says its inhabitants fed

(1) See a former Note, upon the application of this term among the Greek writers.

TIRYNS.

upon wild figs?, and the Arcadians upon acorns'. CHAP. The Argives laid waste the city, and removed its inhabitants to their own capital. Pausanias, by whom this is mentioned⁴, makes frequent allusion to its marvellous walls', considered by him not less entitled than the Pyramids of Egypt to rank among the wonders of the antient world⁶ The prodigious masses of which they consist were put together without cement; and they are likely to brave the attacks of time through ages even more numerous than those which have already elapsed since they were built. Owing to its walls, the city is celebrated in the poems of Homer 7; and the satisfaction of seeing an example of the military architecture of the

(2) This is rather an argument for their Ægyptian origin; for by the wild fig is probably intended the Ficus Sycomorus, the fruit of which is still eaten in Egypt. We did not, however, notice this tree in Greece.

heroic ages, as it was beheld by him, is perhaps CHAP. only granted to the moderns in this single instance. They have remained nearly in their present state above three thousand years. It is believed that they were erected long before the Trojan war: as to the precise period, chronologists are so little agreed with regard even to the arrival of the Phanician and Egyptian colonies under Cadmus and Danaus, that a difference of at least a century may be observed in their calculations'. The celebrity of their Citadel is almost all that is now known of the Character Tirynthians, excepting their natural tendency of the Tito mirth and frivolity. If we may rely upon rynthians. an anecdote cited by the Abbé Barthelemy² from Athenæus³, in their characteristic disposition they were nearly allied to the Parisians of the present day; and, for want of a better argu-

> (1) The Editor of the Chronicle improperly called Parian (which we stated to have been found in Ceos) dates the coming of Cadmus to Thebes 1519 years before Christ : but he adds, in a Note, "Diodorus and Eusebius make Danaus go into Greece, before Cadmus went in search of Europa. Diod. Sic. lib. v. p. 329. Our chronologer places Cadmus eight years before Danaus." (See p. 25. Lond. 1788.) Others date the arrival of Cadmus 1493 before Christ.

ment, the Members of the French Academy may recur to the story, in support of a very probable truth; namely, that the Tirynthians and the Gauls were only earlier and later scions of the same Indio-Europæan stock. Such was their remarkable levity, that the most serious and important concerns served among them merely to give a turn to a bon-mot. At last, even fun became a bore; and they applied to the Oracle of Delphi, to be delivered from the ennui of its perpetual recurrence. The answer of the Oracle put them to a trial, which only served to render their natural character the more conspicuous: it promised relief, upon condition, that, after having gravely sacrificed a bull to Neptune, they should as gravely cast it into the sea. For this purpose the Tirynthians assembled upon the shore; taking especial care to prevent the juvenile members of their society from being present at the solemnity. A young pickle, however, made his way into the crowd; and finding they were eager to drive him from the ceremony, exclaimed, " Are ye then afraid lest I should swallow your bull?"4 The

CHAP. VIII. Further Inquiry into the Origin of

Tiryns.

THE advocates for the early origin of "the pointed style" in *Gothic* architecture will have cause enough for triumph in the *Cyclopéan Gallery* at TIRYNS; exhibiting "lancet arches" almost as antient as the time of *Abraham*¹: and if the learned *Pezron* have not erred in his history of the *Gaüls*, the *Citadel* itself may be considered as a *Celtic* structure². Be this as it may, the subject is certainly curious; and if it

(1) The author would have accompanied this by an engraving, but it has been superseded by Sir *W*. Gell's most accurate representation of the Gallery at Tiryns, as published in his Work, to which the Reader is particularly referred. (See Gell's Itinerary of Greece, Plate xvi. p. 56. Lond: 1810.

(?) See a most ingenious Dissertation on the "Antiquities of Nations," by Paul Perron. Lond. 1809.

serve only as an amusing topic of research, will perhaps be gratifying to the studious Reader. In tracing the march of the Celtæ out of the regions of Upper Asia, he brings a colony, under the name of Titans, from Phrygia into Peloponnesus, some years before the death of the patriarch Abraham³. These men, owing to their astonishing power and prowess, and the mighty works whereby they became signalized, he believes to have been the Giants and Titans of the Septuagint version of Isaiah* and of Judith⁵; men who became afterwards the omnipotent and sovereign gods of Greece and Rome; owing to a common practice among the Antients, of deifying their deceased monarchs. He finds, moreover, the names of all their Princes in the Celtic language'. In a work of this kind, we must leave such profound researches to the investigation of antiquaries and philologists. Let us only see, with reference

(3) "1 have shewn, in treating of those princes who ruled over the *Titans*, that they were the contemporaries of *Abraham*, and even of his father *Terah*." *Pezron's Antiq. of Nations*, p. 185. Lond. 1809. See also p. 83.

VIII.

to Tiryns (concerning whose origin any sound information is as light shining in darkness), whether there be any thing connected with its history likely to corroborate Pezron's opinion. All the writers by whom its builders are mentioned, attribute its architecture to the identical race he has mentioned; that is to say, to the Giants, under a different appellation of Cyclops: and this name was bestowed upon them in consequence of a custom which any Celtic helmet would illustrate, namely, that of having only one aperture for sight, in the middle of the visor. They came also from the country whence Pezron deduces his Titan colony; from the southern provinces of PHRYGIA MAGNA, Caria, and Lycia¹. In the next place occurs a circumstance of a more decisive nature, calculated to confirm the observations of that author in a very striking manner; although by him unnoticed. It is found in an antient name of the Inachus, flowing between Tiryns and Argos.

^{(1) &}quot;Casaubonus, ex Apollodoro, Cyclopas in Lycia invenit, et eos in Græcia regnante Jobates habitasse ait. Jobates Bellerophonti fuit coævus, qui tertia ætate ante bellum Trojanum extitit. Quo tempore Tiryns forsan fuit condita. Strabo Káezs quosdam ad Epidaurum ducit. Caria Lyciæ proxima est, ergo Cyclopes Lycii cum colonia Carum forsan Tirynthem advenerunt." Vid. Annot. in Strabon. Geog. lib. viii. p. 540. ed. Oxon. 1807.

This river was called HALIACMON, from a person who is mentioned by Plutarch^{*} as of -Tirynthian race, but bearing, in fact, the same name as the father of Uranus, by whom the Titan-Celts were conducted into Peloponnesus'. His name was ACMON; but Sanchoniathon, who wrote, as it is believed, his history of Phænice before the Trojan war, plainly intimates that this prince was styled, in the language of that country, ELION (Most high), answering to the Greek title "YYISTOS, altissimus". In Phrygia there was a town called Acmonia'; and one of the Cyclops had the name of Acmonides⁶. Hence it should seem evident that the Titan-Celtæ were of the same race as the Cyclops, who constructed the Tirynthian Citadel; and, consequently, that the walls of Tiryns are of Celtic original.

6 G 2

We crossed the INACHUS at its junction CHAP. VIII. with the Charadrus, in our road from Tiryns Road to to ARGOS. The distance is about six English Argos. miles. Nothing can exceed the magnificence of the scenery all around the Gulph; and it cannot be necessary to enumerate the interesting recollections that serve to render it still more impressive. In this ride from Tiryns to Argos, the prospect is particularly striking: the antient Capital, even in its state of wretchedness, with scarcely a wreck remaining, has still an appearance which is, in every sense of the term, imposing. It leads the traveller to believe that he shall find, upon his arrival, the most ample traces of its pristine greatness. This is principally owing to a cause already assigned; to the prodigious contribution made by the geological features of the country, in the plans of Grecian cities; where Nature has herself, supplied, upon a most stupendous scale, what Art would otherwise more humbly have contrived. In various parts of Greece, where the labours of man have been swept away,- where time, barbarians, nay, even earthquakes, and every other moral and physical revolution, have done their work, an eternal city seems still to survive; because the Acropolis, the Stadium, the Theatre, the Sepul-

chres, the Shrines, and the votive receptacles, are so many "sure and firm-set" rocks; slightly modified, indeed, by the hand of man, but upon which the blast of desolation passes like the breath of a zephyr. Argos is conspicuous in this class of cities: and if, in the approach to it from Tiryns, where Art seems to have rivalled Nature in the eternity of her existence, the view be directed towards the sea, a similar and not less striking object is presented, in the everlasting Citadel of Nauplia. The INACHUS, The River separating the two capitals of Acrisius and Prætus, is now, as it was formerly, a wide, but shallow water-course, sometimes entirely dry. It was dry when we passed. Callimachus mentions its beautiful waters'. On account of its periodical exsiccation, it has been considered by travellers as having been the subject of a greater alteration than it has really sustained. Antient stories, it is true², pretended that it was once remarkable for suicides, committed by persons who had precipitated themselves into its flood *: but these events might happen in an occasional torrent, as well as in a perennial river³.

(1) See the Hymn of Callimachus upon the Baths of Pallas.

(3) " Most of the Grecian streams are winter torrents, and dry in the summer." Squire's MS. Correspondence.

CHAP. VIII.

Inachus.

⁽²⁾ Vid. Plutarch. de Fluviis, pp. 58, 59. Tolosa, 1615.

A circumstance related by Agathocles the Milesian, and cited from his writings by Plutarch¹, in his description of the Inachus, may prove that the state of the river now does not differ from its antient condition. Agathocles maintained, that, being thunderstruck by Jupiter, it became dry in consequence of the heat². Strabo's description of it is applicable to a water-course, rather than to a flowing river³. Plutarch has stated a few observations connected with its natural history, which our time did not enable us to verify. Speaking of its plants and minerals, he says, that the herb Plants and CYURA grew in the bed of the river, celebrated for its properties in assisting parturition: it resembled Peganum⁴; and this word the Latin translator of Plutarch has rendered by Ruta; perhaps from the extraordinary virtues ascribed universally to Rue, which caused it to receive, at an early period in our country, the name of "Herb of grace"." Rue has been celebrated as an antidote against

Minerals.

TIRYNS TO ARGOS.

poison, pestilence, and the devil; being used in exorcisms, and extolled and recommended by almost all medical writers, from Hippocrates to Boerhaave. But the herb called PEGANUM by Theophrastus and Dioscorides differs from Ruta⁶. The plant mentioned by Plutarch remains therefore to be ascertained; because, as 'Puth was the more antient name, particularly in Peloponnesus⁷, and $\Pi_{\eta\gamma\alpha\nu\nu\nu}$ the more modern, it may be supposed that *Plutarch* would have bestowed the former appellation upon it, if it had been applicable. The same author mentions also the herb SELENE, producing a species of foam $(a \varphi_{e} \delta_{s})$, which the peasants collected in the beginning of summer, and applied to their feet, as an antidote against the venom of reptiles⁸. Its minerals were, the BERYLL⁹, and a stone called CORYBAS¹⁰, of a raven colour, used as a charm against fearful dreams. The latter was probably nothing more than the dark fetid limestone, to which imaginary virtues are still

CHAP. VIII.

ascribed in the East: we found it among the most antient amulets in the catacombs of Saccara in Egypt. With regard to the former, it is exceedingly difficult at this time to determine the particular stone called Beryll by the Antients. We learn from Epiphanius, that it was of a yellow colour¹, and found near Mount Taurus. But there were other varieties of Beryll; one resembling the pupil of a serpent's eye"; another like wax, found near the mouth of the Euphrates'. Hence it is evident that different minerals bore this name among the Antients: the first variety may have been our Topaz; the second and third were, in all probability, different appearances of Chalcedony. THEOPHRASTUS does not mention the Beryll; and in Pliny's account of the stone, fifty different minerals may be included. He begins by placing it among *Emeralds*⁴; and the account he gives of the hexangular shape preserved by the lapidaries in polishing, seems to prove that it had the natural form of our *Emerald*, care being

taken to polish it upon its lateral planes: but CHAP. his subsequent remarks, added to his concluding observation that all Berylls are liable to capillary blemishes, and to be vitiated by extraneous substances, brings his Beryll at once to our Quartz ; and this also crystallizes in the hexagonal form.

We arrived at ARGOS, and were most hospi- ARGOS. tably received by the English Baratary', Mr. Blasopulo, pronounced Vlasopulo. He presented us, upon our arrival, a silver medal of Ptolemy, and some beautiful terra-cotta vases found in Terra cotta sepulchres at a village called Pesopodæ, near the Inachus, situate to the north of Argos. The Albanian peasants by whom they were discovered had broken many more; not choosing to use vessels that had been taken from graves, and conceiving them to be of no value. They were all evidently Grecian, and made in an age when the Arts were much advanced, if not in their most splendid æra⁶. A patera with two

(5) A Baratury is a person who enjoys the protection of some nation in alliance with the Porte. Mr. Blasopally was protected by the British nation.

(6) The annexed Plate exhibits thirteen of the most remarkable of the terra cottas found here or at Sicyon, or in other parts of the Peloponnesus.

Fig. 1. is evidently a PATERA; but for what particular use this vessel

_was

VIII.

CHAF. handles, of the most perfect form and exquisite workmanship, was almost covered with a white

was designed by the *Greeks*, is not so conspicuous. Such *pateras* are sometimes represented in the hands of female Bacchanals; possibly, therefore, it was used for drinking wine: the *Turks* drink *sorbet* out of vessels of the same form, but without foot or handle. *Virgil*, in describing *Dido's* royal feast, says, "*Implevit mero pateram*." After the fair Qneen had made a libation, she presented the *patera* to *Bitias*, who drank the whole of its contents:

> "Tum Biliæ dedit increpitans : ille impiger hausit Spumantem pateram."------

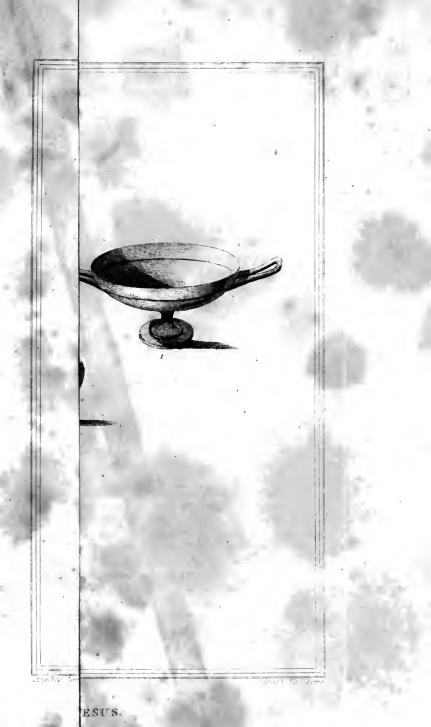

The blood of victims was received in such vessels; and it is highly probable that their form was originally derived from the top part of the human scull, used by all the Cellie tribes in drinking the blood of their enemies, and as a drinking vessel. A tumper in Norway is still called a Skool; and the sorbet cups of the Turks, being without handles and feet, have exactly the shape of the upper part of the crunium. Upon the subject of PATERAS, Gale, in his " Court of the Gentiles," has the following observations: " The Levite having killed the victime, the Priest received the blood in a vessel; which Moses (Exod. xxiv. 6.) calls אננות Aganoth; and the Chaldee, אנות, that is to say, an Aspersorie: the Lxx render it zearneas; so the Vulgate, Craterus. In imitation whereof, the Popa having killed the victime, the Priest received the blood in a vessel; which vessel the Atticks call oquyur. Homer (Odyss. v.) styles it aunov: the Latin, Pateras. So Virgil (Æn. l. iii.) ' Sanguinis et sacri pateras;'-which he understands of the victimes, as Servius."

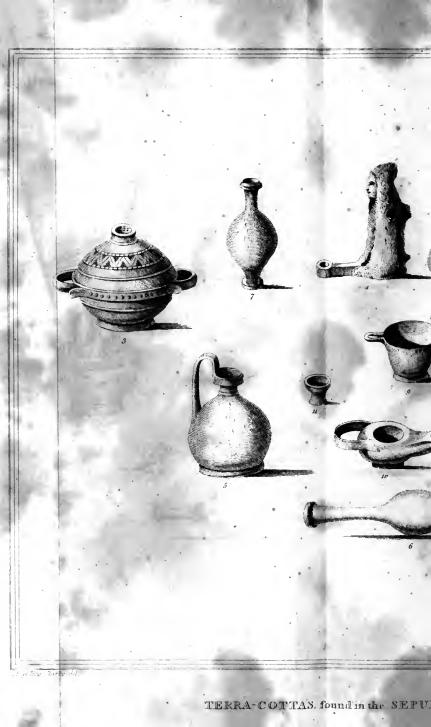

Fig. 2. A LIBATORY VESSEL, four inches in height, painted with dark stripes upon a yellow ground; perhaps for containing oil. It has no orifice above the neck: the only opening is like the spout of a tea-pot, a part being broken off; but the rest is seen between the right handle and the neck of the vessel.

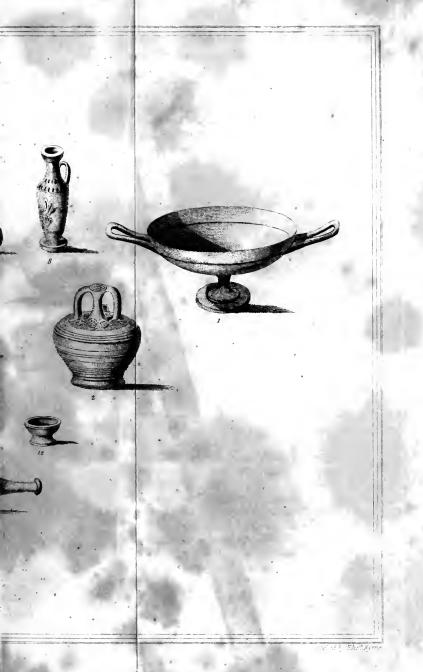

Fig. 3. A beautiful double-handled Cup and Cover, curiously painted red and black upon a yellow ground, four inches high, and five inches in diameter. It was probably intended for honey, the handles being stouter than in the others, and the cover perhaps designed to preserve its contents from flies or other insects.

458

Fig.

TRES of PELOPONNESUS.

ARGOS.

incrustation, like mortar, as hard as flint. After placing it for thirty-six hours in diluted *muriatic* acid, during all which time the extraneous cement dissolved with effervescence, there appeared upon its surface a beautiful

Fig. 4. A LAMP of red clay; perhaps one of the neriew dydluare mentioned afterwards in the text. Sometimes the representation of a human head is found with a handle and spout, as a drinking vessel, like the toys sold in our potteries. The forms of various animals also occur as *lamps* and vessels of libation.

Fig. 5. The GREEK PITCHER, for milk, or water, $5\frac{1}{2}$ inches high to the top of the handle, $4\frac{1}{2}$ inches to the lip.

Fig. 6. A LACHRVMAL PHIAL OF coarse dark clay, nine inches in length: we found several of these in *Sicyon*. This is the most antient form of the *Lachrymatory*: in latter ages they were smaller, and of glass. "PUT THOU MY TEARS INTO THY EOTTLE." Ps. lvi. 8.

Fig. 7. A LACHRYMATORY, formed upon the site of antient Cromyon, of the same material as the preceding: this is $4\frac{1}{2}$ inches high. It has white circles upon a dark ground, the common colour of marl.

Fig. 8. Three of this form, beautiful LIBATORY VESSELS, with black ornaments on a red ground, were found in *Epidauria*. The plant painted upon them is that which architects call *Acanthus*, and antiquaries sometimes the *Lotus*.

Fig. 9. Above twenty vessels of this shape, of different sizes, were found in *Epidauria*; the largest not being more than four inches high, and about five inches in diameter, of a bright red colour; sometimes almost covered with black varnish, shining like polished jet; but of the most delicate workmanship, and nearly as thin as paper.

Fig. 10. A LAMP, of dark, coarse, heavy clay.

Figs. 11, 12. Small vessels, the largest being only one inch in height, and two inches in diameter : perhaps designed for the same use to which they are still applied by modern nations; namely, as stands for salt.

Fig. 13. A small LACHRYMATORY, of red clay.

VIII.

CHAP. black varnish, shining like polished jet, not in the slightest degree affected by the acid. Within the lower superficies of the foot of the vessel, the maker's name was expressed by a Greek monogram; proving either that a Grecian potter was proud to acknowledge this masterly piece of workmanship, or that it was usual to inscribe the names of places celebrated in the manufacture of earthenware; and in this case, the monogram may be intended for METAPEON. It consisted of the letters ME, which had been inscribed with the point of a sharp instrument, and written in this manner:

NE

There were other pateras of the same manufacture, but not entire: also a number of lachrymatories, and libatory vessels, adorned with monochromatic painting; cups resembling our sugar-basons, with covers variously decorated by yellow, red, and black colours; singularly formed lamps, some representing human figures; smaller cups, and, however minute in their size, each of these had its double handle. The Baratary shewed to us a very remarkable intaglio, because, although antient, it had been cut in glass of a green colour; the only instance of the kind we had ever seen.

"We requested that our host would in future CHAP. spare no pains to collect all the terra cottas found in the neighbourhood; promising him that we would find purchasers for them in England, and patrons who would amply repay him for all his expense and trouble, as soon as he should give us information that he had succeeded in his researches. He said he would gladly undertake the work, if it were only to' afford a proof of his gratitude for the protection he enjoyed from the British nation: but we received no intelligence from him afterwards. It is a most extraordinary fact, that, in all the Ignorance elaborate treatises we possess concerning the of their funerals of the Antients, no satisfactory cause use. has been assigned for the quantity of earthen vases found in Grecian sepulchres. In the View of Charon's Ferry, engraved as a Vignette for a former Chapter, the Cymba sutilis, fashioned like a Welch Coracle, or rather an American canoe', is freighted, besides passengers, with empty Amphorx: but these are not the sort of vases found within any of the tombs; although sometimes, as symbols of departed souls, they were

sepulchral

CHAP. VIII.

Hecate's Supper.

placed upon the outsides of the immediate receptacles for the body'. The vases within the graves are of a much finer quality; and sometimes contain little gilded representations of herbs and fruit. There is a passage in the Dialogues of Lucian, where Menippus is asked by Charon what he carries in his satchel; and he answers?, " Lupins, so please you! and Hecate's supper.". This raillery seems to be levelled against a practice among his countrymen, of providing the sepulchres of deceased persons with the provisions which are now found within them, rather than as an allusion to the monthly offerings made at the expense of the wealthy, when a public (deinvov) supper was provided for the poor's. Hecate's supper, we may suppose, would be regulated by the rank and wealth of the deceased '; lupins being considered as the mean and miserable diet of the lowest persons; and hereby is explained the reason why sometimes a single vase is found, of the poorest quality;

(4) Or by the age: for of this we have curious testimony, in the following answer of Apollo, when interceding for the life of Alcestis:

Κάν γεαύς, όληται πλουσίως ταφήσιται.

and why, in certain instances, the number has been increased to forty, of the most costly workmanship, containing representations of fruit and herbs. It should be observed, that Lecti- Lectistersternium, or the custom of giving a supper in a temple to the Gods, may have originated in the funeral feast at tombs, from what has been already said of the origin of temples⁵. This practice of feasting at funerals has existed from the days of Homer⁶; and still exists among the descendants of the antient Celts, both in Ireland and Scotland; and it was once common in England⁷. An author has indeed observed, that Lectisternium began about A. U. C. 356 * that is to say, it was then adopted by the Romans: but it was a much older ceremony in Greece : and the occasion of its introduction among the Romans shews that it was connected

CHAP. with offerings for the dead', as it was during a VIII. solemn supplication for deliverance from the plague. We do not know precisely the nature Probable cause of of the offering that was placed within these depositing Earthen earthern vases, in Grecian tombs : the cake of Vesselsin Sepulchres. flour and honey (uelitoura) was put into the mouth of the deceased, together with a piece of money (davarn) as Charon's fare, and not into any vessel by the side of the corpse : but there were other offerings, rarely noticed by any writer, of which these vessels may be examples; namely, the zoo un that were carried to the grave in honour of the funeral. We have before stated, that the sepulchral terra-cottas have sometimes the form of images. Every person who attended the ceremony of a Grecian funeral brought a complimentary token (rov zorpor) of his respect for the deceased; such as Admetus. in Euripides², denied his father the liberty to give to his wife, which all the rest of the company had previously presented. The nature of the xoo most has never been explained; any more than of the repriseous ayaras, said to be carried

by those who followed the corpse; by some translated imagines; by others, grata munera. From the light thrown upon the subject by a view of the *sepulchres* themselves, there is every reason to believe that these beautiful vases, with all the lamps, luchrymatories, and earthen vessels, found in Grecian tombs, many of them being highly ornamented, were the gifts alluded to by Euripides, either to the dead, or to the Gods of the dead. Hence, perhaps, we arrive at the meaning of the Inscription mentioned in the sixth Chapter of this volume, as found upon an Athenian lamp,-" Socrates, accept this animal !" Pure clay was an offering to the Gods*. Another curious subject of inquiry suggested by these relics, is this: Whence originated the custom? Origin It is undoubtedly of much earlier date than Custom, any thing purely Grecian. In the most antient sepulchres of the Celts, in all parts of Europe, earthen vessels are also found of the simplest form and rudest workmanship, apparently possessing a degree of antiquity far beyond the age denoted by any of the Grecian terra-cottas. PAUSANIAS mentions a terra-cotta Soros that was dug up at Argos, supposed to have been that

> (4) See Greek Marbles, p. 70. Camb. 1809. нн

VOL. VI.

CHAP. VIII.

wherein Ariadne had been buried; thereby demonstrating its great antiquity 1. Such vessels are also found in the Tumuli or Mounds of Tahtary, and in North America; their situation, construction, form, and contents, being so similar, that there can be no hesitation in ascribing their origin to the same people². The supposed tomb of Theseus, opened by Cimon son of Miltiades, in the Isle of Scyros, from the description given of the weapons found within it, appears to have been one of these aboriginal sepulchres. De Stehlin, who was Secretary to the Imperial Academy at Petersburg, declared that there is not one instance of such a Tumulus being found to the northward of the fifty-eighth degree of north latitude'. This perhaps is doutful. A full account of those monuments ought to constitute an independent work; and whenever the subject is properly treated, the observations it is calculated to introduce will illustrate a part of history hitherto entirely unknown.

We employed the whole of this day in

examining the Town and its Ruins. Argos is a large straggling place, full of cottages, with few good houses. As we have before alluded to Celtic remains in this part of Peloponnesus, it may be proper to mention; that the roofs here are not flat, as in almost all parts of the East, but slope like those of Northern nations. The same style of building may be observed in Athens; and in other parts of Greece: whether introduced by Albanian workmen, or owing to customs which antiently existed in the country, we have not been able to learn The women were busied in collecting their cotton from the fields; and at this season of the year all the marriages take place. The present po- Populapulation consists of six thousand, including females and children⁴. There is a school kept by a Greek priest. Being desirous to know what the children were taught, we visited the master, who seemed pleased by our inquiries," as if he had bestowed pains upon his scholars. He said they were instructed in writing, arithmetic, astronomy, physic, and rhetoric. About forty years before, it had been customary for

(4) "Not four thousand," according to Sir W. Gell; (Itin. of Greece, p. 69.) perhaps not including children and women.

the principal families of Nauplia and Argos to send their children to Athens for instruction. The Consul at Nauplia had been there educated: it was in giving us an account of his journeys' to Athens that we first heard any mention made, of the Statue of Ceres at Eleusis; for this had excited his curiosity when a boy, and was regularly visited by him in his way to and from Athens. The houses in Argos are built with a degree of regularity, and fitted up with some comforts uncommon in this part of the world, although in other respects they are wretched. hovels. They are all ranged in right lines, or in parallel lines : and each house, consisting of a single story, has an oven; so that here even the Albanians do not bake their unleavened cakes upon the hearth, as it is usual elsewhere in their cottages. From Argos, the distance to Mantinea is only eight hours; and it is but a day's journey to Tripolizza, the Capital of the Morea. When we heard this, and the pressing invitation of our Baratary to visit with him a part of Arcadia, whose mountains are actually visible from the Citadel, and also to extend our journey to Misitra, we gladly ordered horses for the-expedition; but a powerful antidote to enterprise, the mal-aria fever, returning amongst us, with its most violent paroxysms, during the

night, had so considerably reduced our stock of CHAP. energies before the morning, that with deep regret we were compelled to abandon the design of seeing Mantinea, Megalopolis, and Sparta, and to adhere to our original plan. How few are the travellers who have seen the interior of the Morea! and in that small number, where may we look for one who has given any intelligence that may be called information, respecting the Ruins of the cities which the country is known to contain¹? Perhaps the time is at hand when we shall know more of a region as easily to be

(1) Yes! there is one traveller, whose qualifications for this purpose are well known, and have been already noticed in this Work; but who could never be prevailed upon to estimate the value of his own observations high enough to induce him to publish them. This traveller is John Hawkins, M. A. of Trinity College, Cambridge: and asany thing coming from one who has the satisfaction to rank among his friends, may be imputed to partiality, an Extract from the MS. Letters of Colonel Squire to his Brother may here be considered. appropriate. "With Greece" (says Col. Squire) " our most learned scholars have but a small acquaintance : few travellers have published their observations; many events in history have been misunderstood : and translators and commentators have been entirely bewildered. owing to their ignorance of its topography. The writers, to whom we refer as our best authorities, are trifling, inaccurate, and super-There is, however, a Gentleman in England, Mr. Hawkins, ficial. Brother of Sir Christopher Hawkins, a man of shrewd sagacity, erudition, and indefatigable exertion, who has explored every part of the country, and now possesses very ample means to render a signal service by the publication of the materials he has collected." Colonel Squire's MS. Correspondence.

VIII

CHAP. VIII.

visited as the County of Derbyshire, and where the traveller is not exposed to half the dangers encountered every night in the neighbourhood of London. Groundless apprehensions, calculated only to alarm children, concerning imaginary banditti, and the savage nature of its inhabitants, have been hitherto powerful enough to prevent travellers from exploring its interior: but these are beginning to vanish; and we may hope that many years will not elapse before the shepherds of Arcadia and Laconia, of Messenia and Elis, will have become as good guides to the antiquities of their mountains and valleys, as the natives of Puzzoli now are to the Ruins of Baiæ.

Antiquities. The antiquities of Argos, once so numerous', may now be comprised within a very short list. A brief summary of them as they existed in the second century, omitting the catalogue of statues and altars, may be useful for future travellers: we shall therefore introduce it, followed by a description of the principal remains, as we found them; for these are not likely to be much

(1) See the long list of them in the Second Book of *Pausanias*, chapters 18, 19, 20, 21, 22, 23, 24, from p. 149 to p. 167, of the edition by *Kulnius*. Lips. 1696.

affected by any lapse of time. It is useless to CHAP. refer to Strabo upon this occasion, because he was not upon the spot; but Pausanias, as autoning, coming from Mycenæ to Argos, before he arrives at the Inachus, mentions the Hieron of Ceres Mysias; containing one of those curious temples of which we discovered some remains in Epidauria; (Naos $\delta\pi\tau\eta_5 \pi\lambda iv\theta \delta v$) not merely a temple roofed with baked tiles (for it stood within another building originally itself roofed, although in ruins when Pausanias saw it), but actually a terra-cotta temple. The fragments of this building may yet be discerned; although we could find no part of it so entire as the beautiful terra-cotta cornice and frieze we had been so fortunate as to discover in Epidauria. Thence entering Argos, by the Gate of Lucina, the same author notices in the lower city, as the most conspicuous² of all the temples, that of Apollo Lycias. Afterwards, it is difficult to enumerate all the other temples mentioned by him, because we do not distinctly know what he intends by the word 'Isgov, as distinguished from Naos. Thus, for example, he mentions the most antient

(2) 'Exiquisorarov. lib. ii. c. 19. p. 152. ed. Kuhnii.

VIII.

Temple' of Fortune, and the Hieron of the Hours². We have proved already that Hieron does not necessarily signify a Temple, nor even a building : any thing containing what was sacred received this appellation; a Cave; a Grove; a portable Shrine; and perhaps a Clepsydra. There were, however, many Temples in Argos. There were also Sepulchres and Conotaphs; a Theatre; a Forum; a Mound of Earth³, believed to be the Tomb of the head of the Gorgon Medusa; a Gymnasium; and a subterraneous edifice. After this, beginning his ascent towards the Acropolis, Pausanias notices the Hieron of Juno Acraa, and a Temple of Apollo, situate upon a ridge called Diras⁴. Here was an Oracle, where answers were given so lately as the time when Pausanias saw the temple. Close to this temple there was also a Stadium⁵; and this circumstance is enough to prove that by 'DIRAS' Pausanias does not mean the summit of the hill; for after leaving the Stadium, he continues his ascent by

the monument of the sons of Ægyptus, on the lefthand side of his road, until he arrives (in drea) upon the summit called Larissa, where he finds the temples of Jupiter Larissæus and of Minerva. And in a subsequent part of his description, speaking of the roads from Argos to Mantinæa⁶, and to Lyrcea', he says they began from the gates near Diras; consequently, the Oracular Temple must have been lower than the summit, although upon the hill of the Acropolis. With so much information, and some of the monuments yet remaining in Argos, it would not be difficult for a traveller, having leisure and opportunity, to complete a plan of the antient city. This our time would not permit; but we ascertained some of the antiquities : and first the THEATRE, Antiquiupon the south-eastern side of the hill of the Acropolis; one of the principal objects noticed by Pausanias upon eutering the city. Some of the SEPULCHRES also may be observed.

The THEATRE is a very remarkable structure. Theatre. As usual, it is entirely an excavation of the

(6) Pausan. Corinth. c. 25. p. 167.

(7) Ibid.

CHAP.

CHAP. VIH.

rock; but it differs from every other theatre we saw in Greece, in having two wings, with seats, one on either side of the Cavea; so that it might be described as a triple Coilon. We could not conceive for what purpose these side cavities were designed; unless for minor representations, or as steps in ascending to the central sweep: but if the latter were intended, there would have been no necessity for the curved shape that has been given to them; making the whole structure wear the appearance rather of three theatres than of one. Within the centre Cavea there were sixty-four seats remaining; the height of each seat being thirteen inches. Opposite to this structure are the remains of a very large edifice, built entirely of tiles; probably a part of the Castellum (queiov) which was near to the Theatre, called Criterion, once a court or tribunal of judgment. Above the Theatre ' was the Hieron of Venus; and this we certainly found. Within this temple there was

Hieron of Venus.

> (1) The expression is, brief of robliarcov: and this by Amasaus (vid. Paus. Cor. c. 20. p. 156. ed. Kuhnii) is rendered supra theatrum; but brief, in many instances, is by Pausanias used to signify beyond; that is to say, the next object occurring in the line of his observation. In this instance, the building alluded to was above the Theatre, upon the hill towards the Acropolis.

a statue of the Poetess Telesilla, the MANUELLA SANCHO of her day; who, like the modern . heroine of Saragossa at the head of a band of female warriors, repelled from the walls of the city the enemies of her country, when the Lacedæmonians attacked Argos. "She was represented," says Pausanias 2, " standing upon a pillar, with the books of her poetry scattered at her feet, in the act of regarding a helmet which she was about to put upon her head." And when the Spanish Telesilla, who has so nobly followed the example offered by her Grecian predecessor, shall have a monument consecrated to the memory of her illustrious achievements, her countrymen may find in this description a classical model for its design. The site of the Hieron is now occupied by a Greek chapel, but it contains the remains of columns whose capitals are of the most antient Corinthian order; a style of building unknown in our country, scarcely a model of it having ever been seen in England; although it far exceeds in beauty and simplicity the gaudy and crowded foliage of the later Corinthian. The temples of Venus being generally of the Corinthian order,

(2) Vid. Paus. in Corinth. c. 20. pp. 156, 157. ed. Kuhnii.

and to the to a

we have reason to believe that the *Hieron*, in this instance, was one of them; and we have therefore, in this chapel, another point of observation, as a beacon, in ascertaining the antiquities enumerated by *Pausanias*. We observed this building in our way down from the *Citadel* towards the *sea*; therefore it will be better to describe the objects first noticed in our *ascent* from the modern town.

Diras.

Going up to the fortress, we saw towards our left, that is to say, upon the north-eastern side of the hill of the Acropolis, the ridge called Diras by Pausanias, where the Temple of Apollo Diradiotes was situate. A monastery now occupies the site of the temple, standing upon a high rock, with precipices above and below. It is said to contain a cavern, well suited to the contrivance necessary for the oracles ¹ delivered here in the time of that author. Afterwards, as we proceeded, we saw the remains of antient works also upon our left; and it was upon his left hand in ascending to the Acropolis that Pausanias observed a monu-

(1) See Gell's Itin. of Greece, p. 67. Sir W. Gell says, there is here also space enough for a Stadium; and this agrees with the description of Pausanias, who says, the Stadium adjoined the Temple of Apollo.

ment of the sons of *Ægyptus*². The way up CHAP. VIII. a mountain is little liable to alteration; and probably the track we pursued was nearly, if not entirely, the same that was trodden by him. The fortress itself is evidently a modern building; its walls contain fragments of antiquities, used as materials in building them 3; but on the sides and lower part of it we observed the remains of Cyclopéan architecture, as antient Cyclopéa. as the Citadel of Tiryns, and built in the same style. This structure is mentioned by Pausanias, in his seventh book; where he states that the inhabitants of Mycenæ were unable to demolish the wall of the Argives, built, like that of Tiryns, by the Cyclops *. The Cyclopéan walls and towers of Argos are also noticed by Euripides, Polybius, and Seneca. Hence we had a glorious view of almost all Argolis, and great part of the Arcadian territory, even to the mountains of Laconia, visible from this eminence'. Placed

CHAP. VIII.

Alcyonian Lake. centrally with regard to the Sinus Argolicus, the eye surveys the Laconian and Argolic Promontories; and looks down upon Nauplia, Tiryns, and all the south-western side of the Gulph, almost with the same facility as it regards the streets of: Argos. We saw the Alcyonian Lake' in the last direction, now a weedy pool ': the natives of Argos relate of it, as did Pausanias ?, that nothing swims upon its waters. On this side of the Gulph we saw also the Plain of Lerna, once fabled to be infested with the Hydra; and, in the same direction, the road leading to Tripolizza; until it lost itself in the mountains; following with our eyes great part of a journey we were desirous to accomplish more effectually.

Hence we descended towards the sea; and

(1) There cannot, however, be much alteration in this piece of water since the time of *Pausanias*; who describes it as a pool, measuring in diameter only one third of a stadium (about seventy-three yards), and lying amongst grass and bulrushes. (Vid. Pausan. in Corinth: c. 37. p. 200. ed. Kuhnii.) As to its prodigious depth, it would be curious to ascertain what foundation there was for the account given of its fathomless nature, by the same author; who relates that Nero could not reach the bottom with lead fastened to ropes many stadia in length.

(2) The account given of it by *Pausanias* is, that it draws persons to the bottom who venture to swim upon its surface. The same sort of story is often related, by the common people in this country, of any deep water.

came to the remains of the Temple of Venus before mentioned, above the Theatre, where the Greek chapel is situate'. We were unable to, discover any remains of the Stadium; but this, in all probability, will not elude the researches. of other travellers. After again visiting the Theatre, we found, at the foot of the hill of the Acropolis, one of the most curious tell-tale remains yet discovered among the vestiges of Pagan priestcraft: it was nothing less than one of the Oracular Shrines of Argos alluded to by Oracular Pausanias, laid open to inspection, like the toy a child has broken in order that he may see the contrivance whereby it was made to speak. A more interesting sight for modern curiosity can hardly. be conceived to exist among the ruins of any Grecian city. In its original state, it had been a temple; the farther part from the entrance, where the altar was, being an excavation of the rock. and the front and roof constructed with baked tiles. The altar yet remains, and part of the fictile superstructure : but the most remarkable

(3) Sir W. Gell afterwards found here a broken Inscription, "evidently," he says " relating to Venus." It were to be wished, although a fragment, that he had preserved and published it; as an inscription so decidedly identifying one of the beacons mentioned by Pausanias would materially tend to facilitate future researches upon the spot.-See Gell's Itin. of Greece, p. 64. Lond. 1810.

Shrine.

CHAP. VIII.

480

part of the whole is a secret subterraneous, passage, terminating behind the altar; its entrance being at a considerable distance towards the right of a person facing the altar; and so cunningly contrived as to have a small aperture, easily concealed, and level with the surface of the rock. This was barely large enough to admit the entrance of a single person; who having descended into the narrow passage, might creep along until he arrived immediately behind the center of the altar; where, being hid by some colossal statue or other screen, the sound of his voice would produce a most imposing effect among the humble votaries prostrate beneath, who were listening in silence upon the floor of the sanctuary. We amused ourselves for a few minutes, by endeavouring to mimic the sort of solemn farce acted upon these occasions: and as we delivered a mock oracle, ore rotundo, from the cavernous throne of the altar, a reverberation, caused by the sides of the rock, afforded a tolerable specimen of the "will of the Gods," as it was formerly made known to the credulous votaries of this nowforgotten shrine. There were not fewer than twenty-five of these juggling places in Pelopon-. nesus, and as many in the single province of Bcotia: and surely it will never again become a

question among learned men, whether the CHAP. answers in them were given by the inspiration of evil spirits, or whether they proceeded from the imposture of priests : neither can it again be urged that they ceased at the birth of Christ; because Pausanias bears testimony to their existence at Argos in the second century 1. Perhaps it was to the particular shrine now described that his evidence refers : its position, however, does not exactly warrant this opinion; for the oracle he mentions corresponded rather with the situation of the monastery upon a ridge of the hill of the Acropolis. In this situation he places other shrines; namely, the Hieron of Jupiter Saviour, together with a cell (oranua) or abiding place, where the Argive women were wont to mourn the death of Adonis²: and as not only Heathen deities, but also heroes, were rendered subservient to these purposes of priestcraft, the worship of Adonis might have contributed to swell the list of temples where oracles were delivered. Near to the same spot Other Re-, we saw the remains of an Aqueduct: and to this the City.

CHAP. • VIII. there seems also an allusion by Pausanias, in the obscure account he gives of a channel conducting the water of the Cephissus beneath a temple dedicated to that river¹. But there are other appearances of subterraneous structures requiring considerable attention; some of these are upon the hill: they are covered, like the Cyclopéan gallery of Tiryns, with large approaching stones, meeting so as to form an arched way which is only visible where these stones are open². Among them the traveller may look for the subterraneous edifice with the brazen Thalamus constructed by Acrisius for his daughter'. There is also a large church at the southern extremity of the town, containing fragments of Ionic columns and inscriptions4. One of the mosques is said to have been erected with blocks brought from the Grove of Æsculapius in Epidauria : the same circumstance was also alluded to by Chandler⁶. Perhaps the time may arrive when a more enlightened people than

the *Turks* will again bring to light the valuable antiquities there concealed; although the acquisition should be obtained even at so great an expense as that of taking down and rebuilding a *Moslem* place of worship.

We have now concluded our very cursory survey of Argos: but we shall not quit the relics of this memorable city, without briefly noticing a circumstance in its history, to which little attention seems to have been paid by the compilers of Grecian annals; namely, its illustrious character, as founded on the noble examples offered in the actions of its citizens. If Athens, by arts, by military talents, and by costly solemnities, became "one of the Eyes of GREECE," there was in the humanity of Argos, and in the good feeling frequently displayed by its inhabitants, a distinction which comes nearer to the heart. Something characteristic of the people may be observed even in a name given to one of their Divinities; for they worshipped a "God of Meekness"." It may be said, perhaps, of the Argive character, that it was less splendid than the Athenian, and less rigid

(7) The Argives gave to one of their Gods the name, Μειλιχίου Διός, of the Meek God, or Mild Jupiter. Vid. Pausan. in Cor. c. 20. p. 154. 483

Character of the Antient Argives.

CHAP. VIII. than the Lacedæmonian, but it was also less artificial; and the contrast it exhibited, when opposed to the infamous profligacy of Corinth, where the manners of the people, corrupted by wealth and luxury, were further vitiated by the great influx of foreigners¹, rendered Argos, in the days of her prosperity, one of the most enviable cities of Greece. The stranger who visited Athens might indeed regard with an eager curiosity the innumerable trophies everywhere suspended, of victors in her splendid games; might admire her extensive porticoes, crowded with philosophers; might gaze with wonder at the productions of her artists; might revere her magnificent temples ;-but feelings more affecting were called forth in beholding the numerous monuments of the Argives, destined to perpetuate the memory of individuals who had rendered themselves illustrious only by their virtues².

(2) Witness the filial piety of *Cleobis* and *Biton*, to whom the *Argives* also erected statues at *Delphi*; the heroism of *Telesilla*, in rescuing the

On Tuesday morning, November the tenth, we took leave of the hospitable Baratary, fraught with a rich cargo of Grecian pottery; and set out for Mycenæ, the city of Agamemnon, anticipating a treat among those Ruins, for which Lusieri had already prepared us. We entered the spacious Plain of Argos, level as the still surface of View of a calm sea, and extending in one rich field, Plain. with the most fertile soil, from the mouths of the Inachus towards the north. Having again crossed the dry channel of the $XAPA\Delta P\Omega \Delta H\Sigma$ **ΠΟΤΑΜΟΣ**, and looking back towards the Larissean Citadel, the lofty conical hill of the Acropolis appeared rising in the midst of this plain, as if purposely contrived to afford a bulwark for dominion, and for the possession of this valuable land; which, like a vast garden, is walled in by mountains'. Such was the

the city from its enemies; the conduct of another Argive woman, who saved her son's life by slaying Pyrrhus ; &c. &c. "Hæc urbs plurimis exemplis ad virtutem nos excitantibus abundavit." Gerbel. ap. Gronov. &c. p. 52. Yet these rewards, of statues and trophies erected as public records of private virtues, according to a recent discovery in moral philosophy (See Quarterly Review, No. 33. p. 187. August 1817) afford "an inference, that these virtues were of rare occurrence in the cities where such numerous testimonies were commemorated !!!"

inviting aspect exhibited by the Argive territory to the earliest settlers in this country. No labour was necessary, as amidst the forests and unbroken soil of the North of Europe and of America: the colonies, upon their arrival, found an open field, with a rich impalpable soil, already prepared by Providence to yield an abundant harvest to the first adventurer who should scatter seed upon its surface. We cannot therefore wonder, that within a district not containing more square miles than the most considerable of our English parishes, there should have been established, in the earliest periods of its history, four capital cities, Argos, Mycenæ, Tiryns, and Nauplia, each contending with the other for superiority; or that every roaming colony who chanced to explore the Argolic Gulph endeavoured to fortify a position upon some rock near to the plain, and struggle for its posses-This is all that seems necessary to sion. illustrate the first dawnings of government, not only within this district, but in every part of the Hellenian territories: and the fables transmitted from one generation to another, concerning the contest between Neptune and Juno for the country, as between Neptune and Minerva for Attica, may be regarded as so many records of those physical revolutions, in

ARGOS TO MYCENÆ.

preceding ages, which gave birth to these fertile regions; when the waters of the sea slowly . retired from the land; or, according to the language of poetry and fable, were said to have *reluctantly* abandoned the plains of *Greece*'.

About five miles from Argos, on the left side of the road, we found the remains of an antient structure, which at first we supposed to be those of the Heræum, a temple once common to the two cities of Mycenæ and Argos; when the twin brothers, Acrisius and Prætus, who were grandsons of Belus, possessed the two capitals, and worshipped the same tutelary Deity². This position of it corresponds, in some degree, with its situation, according to Pausanias; but not in all respects. He describes the distance from Mycenæ to Argos as equal to fifty stadia ($6\frac{1}{4}$ miles), and the Heræum as being at the distance of fifteen stadia (one

(1) By attention to natural phænomena upon the spot, some light may certainly be thrown upon the antient fables of the country. A very happy illustration of the origin of the Hydra, which infested the Plain of Lerna, near Argos, as taken from the MS. Journal of the Earl of Aberdeen, by Sir W. Gell, and is found in a Note to his Work. See Itin. of Greece, p.79. Lond. 1810....

mile and seven furlongs) from that city. But CHAP. VIII. he places it to the left' of the city, and uponthe lower part² of a mountain near a flowing stream called *Eleutherion*. The last observations do not permit us to consider the remains of this structure as being any part of the Heræum; as they are situate in the plain, and not close to any rivulet or water-course. But near to this structure there was another Ruin, whose foundations more resembled the oblong form of a temple: it was built with baked bricks, and originally lined with marble. Here, then, there seems every reason to believe we discovered the remains of the whole Hieron Hieron of Ceres of Ceres Mysias, noticed by Pausanias in his Mysias. road from Mycence to Argos, by a description very applicable to these Ruins. He says' the building had no roof, but contained within another temple of brick-work; and that the traveller going thence towards Argos, arrived at the river Inachus. In the different facts the Reader may have collected from this and the preceding Chapter concerning the remains of

ARGOS TO MYCENÆ.

antient art in Argolis, he will have perceived CHAP. the very general prevalence of terra cotta in works of much higher antiquity than it is usual Antiquity of fictile to suppose were constructed of this material. materials A vulgar notion has prevailed, that this style ing. of building was for the most part Roman. When tiles or bricks have been found in the walls and foundations of edifices, among the ruins of Eastern cities, it has been usual to attribute to the structure a Roman origin; and, consequently, to consider works of this kind as of a date posterior to the decline of the Eastern' Empires. That this mode of ascertaining the age of buildings is liable to error, may perhaps now be evident. The statement of a single fact, if other satisfactory evidence could not be adduced, would be sufficient to prove the antiquity of such works; for example, that of the tile, or brick⁴, whereby the scull of Pyrrhus was fractured, when he attempted to take the city of Argos by storm. Indeed, in some instances, the Romans, finding antient structures in Greece had gone to decay because they were built with baked or crude tiles and bricks, repaired them with different materials. Of this there is an

Mycena.

example recorded by Pausanias, and already alluded to in the account of Epidauria'. After leaving this Ruin, we returned into the road; and quitting the plain, bore off upon our right, towards the east, by a rocky ascent along the channel of a water-course, towards the regal residence of Agamemnon, and city of Perseus, built before the War of Troy, full thirteen centuries anterior to the Christian æra. Already the walls of the Acropolis began to appear upon an eminence between two lofty conical mountains: the place is now called Carvato. Even its Ruins were unknown eighteen hundred years ago, when Strabo wrote his account of the Peleponnesus: he says of Mycena, that not a vestige of the city remained². Eighty of its heroes accompanied the Spartans to the defile of Thermopyla, and shared with them the glory of their immortal deed's: this so much excited the jealousy of the sister city, Argos, that it was never afterwards forgiven: the Argives, stung by the recollection of the opportunity

they had thus lost of signalizing themselves, and unable to endure the superior fame of _ their neighbour, made war against Mycenæ, and destroyed the city⁴: this happened in the first year of the seventy-eighth Olympiad', nearly five centuries before the birth of Christ. "In that region," says Pausanias, "which is called Argolis, nothing is remembered of greater antiquity than this circumstance⁶." It is not merely the circumstance of seeing the architecture and the sculpture of the heroic ages, which renders a view of Mycenæ one of the highest gratifications a literary traveller can experience: the consideration of its remaining, at this time, exactly State of the as Pausanias saw it in the second century, and in such a state of preservation that an altorelievo described by him yet exists in the identical position he has assigned for it, adds greatly to the interest excited by these remarkable Ruins: indeed, so singularly does the whole scene correspond with his account of the place, that, in comparing them together,

CHAP. it might be supposed a single hour had vill. not elapsed since he was himself upon the spot.

Extraordinary Sepulchre;

The first thing that we noticed, as we drew nigh to the gate of the city, was an antient Tumulus of immense size, upon our right; precisely similar, in its form and covering, to those conical sepulchres so frequently the subject of allusion in these Travels; whether called barrows, cairns, mounds, heaps, or by whatever other name, (as for example, Tépe by the Turks, and rapos and yound by the Greeks,) they are now pretty well understood to have all of them reference to a people of the most remote antiquity (possibly the Celta), and to have been raised for sepulchral purposes. Particular stress is now laid upon this circumstance, for reasons that will presently appear. This Tumulus has evidently been opened since it was first constructed, and thereby its interior has been disclosed; but at what time this happened is quite uncertain; probably in a very remote age, from the appearance it now exhibits. The entrance is no longer concealed : like that of a Tomb described in the First Part of these Travels, as found upon the Cimmerian

MYCENÆ.

Bosporus, the door is in the side of the sepulchre: and there are steps in front of it. A small aperture in the vertex of the cone has also been rendered visible, by the removal of the soil; but this, as well as the entrance in the side, was once closed, when the mound was entire, and the Tumulus remained inviolate. All the rest of the external part is a covering of earth and turf; such as we see in every country where the Tumuli appear. We ascended along the outside to the top: and had it not been for the circumstances now mentioned, we should have considered it in all respects similar to the Tombs in the Plain of Troy, or in the South of Russia, or in any of the Northern countries of Europe. But this Sepulchre, among modern travellers, has received the appellation of The brazen Treasury of Atreus and his Sons; an assumption not the requiring more of historical evidence in its of Atreas. support, than has yet been adduced to substantiate the fact. In the first place, it may be asked, What document can be urged to prove, either that the treasury of Atreus was brazen, or that this was the treasury? The whole seems to rest upon the discovery of a few bronze nails within the Sepulchre; used evidently for the purpose of fastening on something

493

CHAP. VIII.

CHAP. VIII.

wherewith the interior surface of the cone was formerly lined. But allowing that the whole of the inward sheathing consisted of bronze plates, what has this fact to do with the subterraneous cells or dwellings (υπόγαια οικοδομήματα) where the treasures of Atreus were deposited? Cells of bronze were consistent with the antient customs of all Argolis: there was a Cell of this description at Argos, used for the incarceration of Danaë': a similar repository existed in the Citadel of Mycenæ, said to have been the hiding-place of Eurystheus, when in fear of Hercules². But this Sepulchre is without the walls of the Acropolis; nor can it be credited that any sovereign of Mycenæ would construct a treasury without his Citadel, fortified as it was by Cyclopéan walls. Pausanias, by whom alone this subterraneous treasury of Atreus is mentioned, clearly and indisputably places it within the Citadel, close by the Sepulchre of the same monarch. Having passed the gate of the city, and noticed the Lions over the lintel, he speaks of the Cyclopéan wall surrounding the city, and describes the

Vid. Pausan. in Corinth. c. 23. p. 164. Ed. Kuhnie.
 Apollodorus, lib. ii. c. 4. Göett. 1782.

antiquities it inclosed. "Among the Ruins of CHAP. Mycenæ," says he', " there is a spring called Perséa, and the subterraneous Cells of Atreus and of his Sons, where they kept their treasures: and there indeed is the Tomb of Atreus, and of all those whom, returning with Agamemnon from TROY, Ægisthus slew at supper." Cassandra being of course included among the number, he observes, that this circumstance had caused a dispute between the inhabitants of Mycenæ and those of Amyclæ concerning the Monument (Mrnua) of Cassandra, which of the two cities really possessed it. Then he adds, that another Monument is also there, that of Agamemnon himself, and of his charioteer Eurymedon: and he closes the chapter, saying⁴, "The Sepulchres of Clytæmnestra and Ægisthus are without the walls; not being worthy of a situation where Agamemnon and those slain with him were laid." From these observations of *Pausanias* we learn

(3) Μυκηνών δὶ ἐν τοῦς ἱρειπίως κρήνη τί ἐστι καλουμένη Περσεία, καὶ Ἀτρίως καὶ τῶν παίδων ὑπόγαια οἰκοδομήματα, ἕνθα οἱ θησαυροί σφισι τῶν χρημάτων ዥσαν. τάφος δἱ ἐστι μὲν Ἀτρέως, εἰσὶ δὲ καὶ ὅσους σὺν Ἀγμάμινου ἐπανήποντας ἰξ Ἰλίου δειπνίσας κατεφόνευσιν Αἴγισθος. Pausan. Corinth. c. 16. p. 147.

CHAP. two things ; first, that this Sepulchre could not VIII. have been the Treasury of Atreus, because it is without the walls of the Acropolis; secondly, that it cannot be the Monument (Mrnua) of Agamemnon, according to Pausanias, because this was within the Citadel. If the names assigned by him to the different monuments of Mycenæ may be considered as duly authorised by history, which perhaps is doubtful, we might Heroum of consider it as the Heroum of Perseus, with whose situation it seems accurately to correspond. As soon as Pausanias leaves the Citadel, and begins his journey towards Argos, the first object noticed by him is the HEROUM; describing it as upon his left hand'. His account therefore agrees with the position of this magnificent Sepulchre, which is worthy of being at once both the Tomb and the Temple of the consecrated founder of Mycenæ. Here, if we had no other document to consult than the description of Greece by that author, we should be compelled." to terminate our inquiry; but, fortunately for our subject, we are able to select as a guide

upon this occasion a much more antient writer than Pausanias; one, indeed, who has cast but a

Perseus.

glimmering light among the Ruins of Mycenæ, CHAP. but every ray of it is precious. It was here that SOPHOCLES laid the scene of his Electra; Sophocles. and evidence is afforded, in the present appearance of the place, to prove that his allusions to the city were founded upon an actual view of its antiquities. When it is recollected that these allusions were made nearly six centuries before the time of Pausanias, every inference fairly deducible from them is entitled to consideration. It is worthy of remark, that Sophocles was thirtyone years of age when Mycenæ was laid waste by the Argives²; consequently he had ample opportunity of visiting the city prior to that event, and of gathering from its inhabitants the circumstances of its antient history; but Pausanias writing so long afterwards, although upon the spot, could only collect from oral testimony, and tradition, his account of the antiquities: indeed it has been already shewn, that, when speaking of Mycenæ, he says the inhabitants of Argolis remembered nothing more antient than the circumstances attending its downfall³.

(2) According to the Arundel Marbles, Sophocles died B.C. 406, at the age of ninety-one, sixty years after the capture and destruction of Mycenæ by the Argives.

(3) Vid. Pausan. Corinth. c. 15: p. 144. VOL. VI. KK VIII.

CHAP. VIII.

Internal Evidence of Sophocles having visited the spot.

In the beginning of the *Electra*, the prospect is described as it was viewed by a spectator upon his arrival at Mycenæ; and the beauties of the poet can only be adequately estimated by persons who have been upon the spot. The best commentary upon the drama itself would be an accurate representation of the very scene, as it is exhibited to a spectator who is placed before the Propylæa of the Acropolis of Mycenæ. When the companion of Orestes is made to say, upon coming to the gates, that "Argos is present to the view', and that the Heraum is upon the left hand²," the Scholiast has been so confounded as to make of Argos and -Mycenæ one city; whereas the speaker is only describing what the eye commands from that situation. Argos is thence in view; making a conspicuous object upon the right hand'; as the Heræum, according to Pausanias, also did upon the left*.

Ibid. vv. 11,12. p. 178.

and the second

(3) See Plates VIII. IX. facing pp. 36, 38, of Gell's Itin. of Greece. Lond. 1810. Sir W. Gell's drawings afford a valuable commentary upon the text of Sophoeles, in the opening of the Electra.

(4) Μυκηνών δι iv άριστερά, πίντε άπίχει και δίκα στάδια τό 'Ηραΐου. Pausania Corinthiaca, c. 17. p. 147. ed. Kuhnii.

These were objects naturally striking the attention in the noble prospect from the entrance to the city; and there could not have been an individual within the Theatre at Athen when this Tragedy was presented, who had ever visited Mycenæ, that would not have been sensible of the taste and accuracy of Sophocles, in making those remarks. We may now see whether this Tumulus is not alluded to by Sophocles, and by Euripides, and its situation distinctly pointed out as being on the outside of the gates, according to the usual custom respecting Grecian sepulchres. But, previous to this, it will be necessary to state, that when Sophocles mentions the regal seat of the Kings of Mycenæ, he is not speaking of a single building answering to the vulgar notion of a house, but of the whole structure of the fortress, wherein they resided; a Citadel; resembling that of the Kremlin at Moscow, formerly inhabited by Russian sovereigns; or, like the Tower of our metropolis, where the English monarchs once resided. It is in this sense that he uses the word $\Delta \tilde{\omega} \mu \alpha^{2}$,

Tomb of Agamem-

non.

CHAP.

with reference to all the buildings inclosed by the Acropolis; and the gates of it are called Propylæa¹, as in the instance of the Athenian Citadel. This will be further evident when we proceed to a description of the entrance to the Acropolis; for the gate is not more distinctly alluded to by Pausanias than by Sophocles himself, as will presently appear. Orestes, desirous of bearing his vows to his father's tomb, repairs thither before he enters the Propylæa; and Electra, who is only permitted to leave the Citadel in the absence of Ægisthus, meets Chrysothemis upon the outside of the gates, carrying the offerings sent by her mother to appease the Manes of Agamemnon². The position of the Sepulchre seems, therefore, in all respects, to coincide with that of the Tumulus we are now describing; but the words of Sophocles are also decisive as to its form; for the Tomb of Agamemnon is not only called rapos, but also rolary": and as, in this Tragedy, the poet adapted his

description to a real scene, and to existing objects, there seems reason to believe that, in his time at least, this remarkable Sepulchre was considered by the inhabitants of Mycenæ as the TOMB OF AGAMEMNON; although described by Pausanias rather as the Heroum of Perseus. But the most striking evidence for the situation of the Tomb of Agamemnon occurs in the Electra of Euripides. When Orestes, in that tragedy, relates to Pylades his nocturnal visit to the sepulchre of his father, it is expressly stated that he repaired thither without entering within the walls*. Possibly, therefore, the known existence of this Tumulus, and of its form and situation, suggested both to Sophocles and to Euripides their allusions to the Tomb of Agamiemnon, and to the offerings made by Orestes at his father's sepulchre. The Reader, after a perusal of the facts, will, of course, adopt his own conjecture. We shall now proceed to a further description of the Monument itself.

Having descended from the top of it, we Interior repaired to the entrance, upon its eastern side. Tumulus.

CHAP. VIII.

Enormous Lintel. Some steps, whereof the traces are visible, originally conducted to the door. This entrance, built with all the colossal grandeur of Cyclopéan architecture, is covered by a mass of breccia, of such prodigious size, that were it not for the testimony of others who have since visited the Tomb, an author, in simply stating its dimensions, might be supposed to exceed the truth. The door itself is not more than ten feet wide; and it is shaped like the windows and doors of the Egyptian and earliest Grecian buildings, wider at the bottom than at the top; forming a passage six yards long, covered by two stones. The slab now particularly alluded to, is the innermost entablature; lying across the uprights of the portal; extending many feet into the walls of the Tomb, on either side. This vast lintel is best seen by a person standing within the Tomb, who is looking back towards the entrance': it consists of a coarse-grained breccia, finished almost to a polish: and the same siliceous aggregate may be observed in the mountains near Mycenæ, as at Athens. We carefully measured this mass, and found it to equal twenty-seven feet in length, seventeen feet in width, and four feet seven inches in

(1) See Plate VI. of Gell's Itin. of Greece, facing p. 34. Lond. 1810.

thickness. There are other stones also of immense size within the Tomb; but this is the most considerable; and perhaps it may be mentioned as the largest slab of hewn stone in the world². Over this entrance there is a triangular aperture; the base of the triangle coinciding with the lintel of the portal, and its vertex terminating pyramidically upwards, so as to complete, with the inclining sides of the door, an acute, or lancet arch. This style of architecture, characterizing all the buildings of Mycenæ and of Tiryns, is worthy of particular attention; for without dwelling upon any nugatory distinctions as to the manner wherein such arches were constructed; whether by projecting horizontal courses of stone, or by the latter invention of the curvature exemplified in all the older Saracenic buildings', it is evident that the acute or lancet arch is, in fact, the oldest form of arch known in the world; and that examples of it may be referred to, in buildings

(2) Excepting only *Pompey's Pillar*: but this is of a different form, being not so wide, although much longer. The famous pedestal of the statue of *Peter the Great*, at *Petersburg*, often described as an entire mass of granile, consists of several pieces.

CHAP. VIII.

Use of the Triangular Cavity above the Entrance.

Inner Chamber,

erected before the War of Troy. The use of the triangular aperture above the portal is satisfactorily explained by the appearance of the Gate of Mycenæ, where a similar opening is filled by a triangular piece of sculpture in altorelievo. The cause of placing such tablets in such situations may be shewn by reference to existing superstition : they were severally what a Russian of the present day would call the Obraze or Bogh; an idolatrous type or symbol of the mythology of the country: Sophocles, in the description he affords of Mycenæ, alludes to this antient custom, as will afterwards appear. Having passed the entrance, and being arrived within the interior of the tomb, we were much struck by the grandeur of its internal appearance. Here we found that what appears externally to be nothing more than a high conical mound of earth, contains within it a circular chamber of stone, regularly built, and terminating above in a conical dome, corresponding with the exterior shape of the tumulus. Its form has been aptly compared to that of an English bee-hive'. The interior superficies of the stone was once lined either with metal or

(1) The Greek bee-hives have a different form: they are generally cylindrical.

2.1.1.

CHAP.

VIII.

MYCENÆ.

with marble plates, fastened on by bronze nails; many of which now remain as they were originally driven into the sides. These nails have been analyzed, and proved to consist of copper and tin²: the metal is therefore, properly speaking, the yalzos of Homer, or bronze; a compound distinguished from the orichalcum', or brass, of later ages, which consisted of copper and zinc. We had scarcely entered beneath the dome, before we observed, upon the right hand. another portal, leading from the principal chamber of the tomb to an interior apartment of a square form and smaller dimensions. The door-way to this had the same sort of triangular aperture above it that we had noticed over the main entrance to the sepulchre; and as it was nearly closed to the top with earth, we stepped

1 2 . 1 · · · /

(2) In the proportion of eighty-eight parts of copper added to twelve of tin, according to their analysis by Mr. Hatchett. The same constituents, nearly in the same proportion, exist in all very antient bronze. The celebrated W. H. Wollaston, M.D. Secretary to the Royal Society, analyzed some bronze arrow heads of great antiquity found near Kremenchick in the South of Russia, and observed the same compound of copper and tin. Possibly the most antient bronze may be derived from a native alloy consisting of the two metals in this state of combination

(3) See Watson's Chemical Essays, vol. IV. p. 85, et seq. Comb. 1786. where the learned author ingeniously proves that the orichalcum of the Romans was a metallic substance analogous to our compound of copper and zinc; or brass. 505

CHAP. VIII.

CHAP. VIII. into the triangular cavity above the lintel, that we might look down into the area of this inner chamber; but here it was too dark to discern any thing. Being afraid to venture into a place of unknown depth, we collected and kindled a fagot of dry bushes, and, throwing this in a blaze to the bottom, we saw that we might easily leap down and examine the whole cavity. The diameter of the circular chamber is sixteen yards; but the dimensions of the square apartment do not exceed nine yards by seven. We did not measure the height of the dome; but the elevation of the vertex of the cone, from the floor in its present state, is said to be about seventeen yards'.

After leaving this sepulchre, the Cyclopéan walls of MYCENÆ, extending to a short distance in a parallel projection from the entrance to the *Citadel*, pointed out to us the approach to the gate on this side; which is built like *Stonehenge*, with two uprights of stone, and a transverse entablature of the same massive construction. Above this is a *triangular repository* similar to those already described within the tomb; but

(1) See Gell's Itin. of Greece, p. 30. Lond. 1810.

instead of being empty, as in the former instances, it is entirely filled by an enormous altorelievo, upon a stone block of a triangular form; exhibiting two Lions, or rather Panthers, standing Lconine like the supporters of a modern coat of arms. This is the identical piece of sculpture noticed by Pausanias as being over the gate of the Citadel². But the mention he has made of it does not appear to have been the only instance where this curious specimen of the sculpture of the heroic ages is noticed by antient writers. The allusions to a real scene in the Electra of Sophocles have been recently stated; and while we now shew that the same drama has also preserved the record of a very curious superstition, it will likewise appear that this remarkable monument of the antient mythology of Mycenæ did not escape his notice. Orestes, before entering the Citadel, speaks of worshipping the statutes of the Gods of the country which are stationed in the Propylæa'. The antient custom of consecrating gates, by placing

Gate.

CHAP. VIII.

sacred images above them, has existed in every period of history; and it is yet retained in some countries. There is still a holy gate belonging to the Kremlin at Moscow; and the practice here alluded to is daily exemplified in the Russian city, by all who enter or leave the Citadel through that gate. Every thing therefore conspires to render the Ruins of Mycenæ, and especially of this entrance to the Acropolis, preeminently interesting; whether we consider their venerable age, or the allusions made to them in such distant periods when they were visited by the Poets and Historians of Greece as the classical antiquities of their country; or the indisputable examples they afford of the architecture, sculpture, mythology, and customs of the heroic ages. The walls of Mycenæ, like those of the Citadels of Argos and Tiryns, were of Cyclopéan masonry, and its gates denote the same gigantic style of structure. Any person who has seen the sort of work exhibited by Stonehenge, and by many other Cellic remains of a similar nature, will be at no loss to figure to his imagination the uprights and the lintels of the Gates of Mycenæ. We endeavoured to measure those of the principal entrance, over which the leonine images are placed. The length of the lintel equals fifteen

508

Dimen-

of the Propylaa.

sions and description feet two inches; its breadth, six feet nine inches; and its thickness, four feet: and it is of one entire mass of stone. The two uprights supporting this enormous slab might afford still ampler dimensions; but these are almost buried in the soil and rubbish which have accumulated below so as to reach nearly to the lintel. Above this lintel stands the remarkable piece of sculpture alluded to by Sophocles' and by Pausanias'. It therefore requires a distinct examination, and a very particular description. The last of these authors, in the passage before cited', has Mytho-logical called the two animals, there represented, symbols. Lions; but they are evidently Panthers, or Tigers; the more appropriate emblems of that branch of the Heathen Mythology which was peculiarly venerated by the inhabitants of Mycen x^4 . This piece of sculpture is, as before stated, an alto-relievo of a triangular form ; the base of the triangle resting upon the lintel of the gate; and its top pointing upwards, in such a manner, that a perpendicular line bisecting

(3) Ibid. See the words of Pausanius in a former Note.

(4) Vid. Sophoel. Elect. passim.

CHAP. VIII.

the angle of the vertex would also divide the CHAP. VIII. lintel into two equal parts. Such a line has been used by the antient sculptor for the position of a pillar exactly resembling a sepulchral Stélé, resting upon a pedestal over the lintel; but this pillar is most singularly inverted, the major diameter of the shaft being placed uppermost; so that, contrary to every rule we are acquainted with respecting antient pillars, its diameter is less towards the base than at the capital. As to the order of architecture denoted by this pillar, it is rather Tuscan than Doric ; and it is remarkably ornamented by four balls, placed horizontally above the Abacus. There is also a circular ornament, or Orb, in the front of the pedestal, which is a double Torus. The pillar is further supported by two Panthers; one standing erect on either side of it, with his hinder feet upon the lintel, but with his two fore-paws upon the pedestal of the pillar. The heads of these animals seem to have been originally raised, fronting each other, above the capital; where they probably met, and occupied the space included by the vertex of the triangle; but they have been broken off, and no part of them is now to be seen. The two Panthers, thus placed on the two sides of

MYCENÆ.

the pillar, exactly resemble the supporters used CHAP. in heraldry for an armorial ensign'. The dimensions of this alto-relievo are as follow: the height, nine feet eight inches; the width, in the broadest part towards the base of the triangle, eleven feet nine inches; the thickness of the slab, one foot ten inches. The stone itself exhibits, upon one side of it, evident marks of a saw; but it is in other respects extremely rude. As it has been fortunately preserved in its pristine situation, it serves to explain the nature of the triangular cavities above the doors in the tomb we have so lately described; proving that they were each similarly occupied by a sacred tablet of the same pyramidal or triangular form. We have before seen that the whole inclosure of the Acropolis of Athens was one vast shrine or consecrated peribolus; and the Citadel of Mycenæ upon a smaller scale was probably of the same nature. These tablets, Consetherefore, were the Hiera, at the Gates of the holy Gates. places before which the people worshipped. Of the homage so rendered at the entering in of sanctuaries, we find frequent allusion in the Scriptures. It is said in Ezekiel^e, that "THE

(2) Ezekiel xlvi. 3.

⁽¹⁾ See the Vignette to this Chapter.

CHAP. PEOPLE OF THE LAND SHALL WORSHIP AT THE VIII. DOOR OF THE GATE BEFORE THE LORD, IN THE

SABBATHS, AND IN THE NEW MOONS:" and in the sublime song of the sons of Korah', the Gates of the Acropolis of Jerusalem, owing to their sanctity, are described as of more estimation in the sight of God, "than all the dwellings of-Jacob." Mycenæ has preserved for us, in a: state of admirable perfection, a model of one of the oldest Citadels of the world; nor .can there be found a more valuable monument for the consideration of the scholar profoundly versed in the history of antient art, than these precious relics of her Propylaa, exhibiting examples of sculpture more antient than the Trojan War, and of the style of fortification used in the heroic ages; and also a plan of those Gates, where not only religious ceremonies were performed, but also the courts of judicature were held². For this purpose, it was necessary that there should be a paved court, or open space, in the front of the Propylæa; as

(2) Vide Chronicon Parium, Epoch 5. where the place of Council for the Amphicityones is called Πολαία. Suidas says, that not only the place (ἐ τόπος,) but the Assembly itself, had this name. (Vid. Suid. in voc. Πολαγόραι.) See also Job xxix. 7. Ps. lxix, 12, &c.

2

⁽¹⁾ Psalms lxxxvii. 2.

MYCENÆ.

it was here that kings and magistrates held CHAP. their sittings upon solemn occasions. It is said of the kings of Israel and Judah, that they sat on their thrones in a void place3, IN THE ENTRANCE OF THE GATES OF SAMARIA, where ALL THE PROPHETS PROPHESIED BEFORE THEM. The Gate of Mycenæ affords a perfect commentary upon this and similar passages of Scripture: the walls of the Acropolis project in parallel lines before the entrance, forming the sort of area, or oblong court, before the Propylaa, to which allusion is thus made; and it is in this open space before the Citadel that Sophocles has laid the scene in the beginning of his Electra. The Markets were always in these places⁴, as it is now the custom before the Gates of Acre, and many other towns in the East: hence it is probable, that, in the mention made by Sophocles of the Lycean Forum⁵, he is not alluding to one of the public Fora of Argos, but to the Pylagora or Market-place at the Gate of the of Mycenæ, whose inhabitants, in common with Pylagoræ. all the Argives, worshipped the Lycean Apollo.

Ægyptian Characteristics.

The same author makes the worship of Apollo, or the Sun, the peculiar mythology of the city'; and it is confirmed by the curious symbols of the Propylæa, before which Orestes pays his adoration². Apollo, as a type of the Sun, was the same divinity as Bacchus; and the two Panthers supporting the pillar represent a species of animal well known to have been sacred to the Indian Bacchus. This divinity, also, the Osiris of Egypt, was often represented by the simple type of an orb; hence the introduction of the. orbicular symbols: and among the different forms of images set up by antient nations in honour of the Sun, that of a pillar is known to have been one. There was an image of Apollo which had this form at Amyclæ³; and the Sunimages mentioned in the Sacred Scriptures seem to have been of the same nature. In the book of the Jewish Law, immediately preceding the passage where the Israelites are commanded to abstain from the worship of "the sun, or moon, or any of the host of heaven," it is forbidden to them to set up any idolatrous pillar⁴. All

MYCENÆ.

the superstitions and festivities connected with the Dionysia came into Greece with Danaus from Egypt³. The cities of Argolis are, consequently, of all places the most likely to retain vestiges. of these antient orgies; and the orbicular symbols consecrated to the Sun, together with the pyramidal form of the tablets, the style of architecture observable in the walls of Mycenæ, and the magnificent remains of the the sepulchres of her kings, all associate with our recollections of Egypt, and forcibly direct the attention towards that country. That the, rites of Apollo at Mycenæ had reference to the worship of the Sun is a circumstance beautifully and classically alluded to by Sophocles; who introduces Electra hailing the holy light⁶, and calling the swallow Messenger of THE GOD7, because, being the herald of the coming spring, it was then held sacred, as it now is in that country.

(5) According to Plutarch, the Dionysia were the same with the Egyptian Pamylia. The δi τῶν ΠΑΜΥΛΙΩΝ isograp ἄγοντις, (ὥστιρ signrau) φαλλικάν οὄσαν, κ.τ. λ. Plut. de Isid. et Osir. cup. 36. Francof. 1599. For the Ægyptian origin of these festivals, see also Herodot. lib. ii. The Orgia, and Trieterica, came from Thrace, but they were originally from Ægypt. See Diod. Sic. vol. I. pp. 239, 248.

CHAP. VIII.

CHAP. VIII. Walls of Mycenæ.

This gate faces the north-west. After we had passed it, we followed the circuit made by the walls around the hill of the Citadel. These consist of huge unhewn masses of stone, so fitted and adapted to each other as to have given rise to an opinion that the power of man, was inadequate to the labour necessary in building them. Hence the epithet of Cyclopéan, bestowed upon them by different authors'. The Peribolus they inclose is oblong, and about three hundred and thirty yards in length. Upon the northern side are the remains of another portal, quite as entire as that we have already described, and built in the same manner; excepting that a plain triangular mass of stone rests upon the lintel of the gateway, instead of a sculptured block as in the former instance. We saw within the walls of the Citadel an antient cistern, which had been hollowed out of the breccia rock, and lined with stucco. The Romans had no settlement at Mycenæ; but such is the state of preservation

Antient Cistern.

MYCENÆ.

in which the cement yet exists upon the sides of this reservoir, that it is difficult to explain the cause of its perfection after so many centuries. Similar excavations may be observed in the Acropolis of Argos; also upon the Mount of Olives near to Jerusalem; and among the remains of the antient cities of Taurica Chersonesus, particularly in the rocks above the Portus Symbolorum. The porous nature of breccia rocks may serve to explain the use and perhaps the absolute necessity of the stucco here; and it may also illustrate the well-known fable concerning those porous vessels which the Danaïdes were doomed to fill; probably alluding to the cisterns of Argos which the daughters of Danaus were compelled to supply with water, according to the usual employment of women in the East. The other antiquities of Mycenæ must remain for the more attentive examination of future travellers; who, as it is hoped, will visit the Ruins provided with the necessary implements for making researches, where, with the slightest precaution, they will be little liable to interruption on the part of the Turks: the place being as destitute of inhabitants, and almost as little known or regarded, as it was in the time of Strabo; when it was believed that

CHAP. VIII.

MYCENÆ.

CHAP. VIII. not a vestige of Mycenæ could be found. The inducement towards such inquiries is of no common nature: whatever may be discovered will relate to the history of a city which ceased to be inhabited long before the Macedonian conquest, and to the manners of a people coëval with Æschylus, with Sophocles, and with Euripides.

AFTER leaving Mycenæ, we again descended towards the Plain of Argos', lying westward; and coming to a village called Carvati, made a Journey to Nemea.

CHAP. IX.

(1) "We descended from Mycenæ into the rich plain of Argos; not now deserving the epithet of in roboros, for the horses in this neighbourhood are beyond measure miserable."- Colonel Squire's MS. Correspondence.

CHAP. IX.

hearty meal upon eggs and coffee. We carried with us an introductory letter to a person named Andriano, who had discovered, as we were informed, another Tomb at Mycenæ, similar to the one we have described; but we could not find him, and the people of the village knew nothing of it. We therefore continued our journey northward for Nemea. As this route lies out of the antient road from Corinth to Argos, (which did not pass through Nemea,) the objects noticed by Pausanias, in the beginning of that part of his second book which he calls ARGOLICA, do not occur. The city of Cleonæ was one of this number'; whose remains have been observed in the road to Corinth, and at ten miles' distance from that city^e. The road from Mycenæ to Nemea coincides with the road to Corinth for a short distance after leaving Carvati; but upon reaching the mountains, which separate the two plains of Argos and Nemea, it bears off by a defile across a mountain towards the west. Some allusion to

Defile of Tretus.

> (1) Έκ Καφίνδου δ' εἰς * Λεγος ἰρχομίνα Κλεοπαὶ πόλις ἰστὶν αὐ μεγάλη. Pausan. in Corinth. c. 15. p. 143. ed. Kuhnii.

> (2) Chandler found them upon a hill in the direct road from Argos to Corinth. See Chandler's Travels in Greece, ch. 57. p. 234. Oxford, 1776.

JOURNEY TO NEMEA.

this defile occurs in Pausanias, and to its deviation from the main road : he says there were two ways of going from Cleonæ to Argos; one. of them by Tretus, a narrow and a circuitous way, but the best carriage road of the two3. As we entered this defile, we travelled by the side of a rivulet of very clear water, through woods which were once the hauuts of the famous Nemæean Lion. The only animals we saw were some very fine tortoises. We passed one or two huts inhabited by wild-looking fellows, who told us they were the guards of the pass. They offered us water, and we gave them a few paras. Near this place, we observed the remains of the old road alluded to by Pausanias in his account of this defile : the marks of wheels were yet visible; the surface of the stone being furrowed into ruts; which must have been worn by the wheels of antient carriages'; because vehicles of this kind are

(3) Έχ Κλιωνών δί είσιν ἐς Αργος όδοὶ δύο· ἡ μὲν ἀνδράτιν εὐζώνοις και ἐστιν ἐπίτομος, ἡ δὲ ἐπὶ τοῦ καλουμένου Τρητοῦ, στενὴ μὲν καὶ αὐτὴ περιεχόντων δρῶν, ἐχήμασι δί ἐστιν ὅμως ἐπιτηδιιοτίρα. Pausan. ibid. p. 144.

(4) Sir W. Gell measured the distance between the furrows. According to his observation, the wheels of antient carriages "were placed at about the same distance from each other as in those of modern times." See Itin. of Greece, p. 27. Lond. 1801.

CHAP. not now used by the inhabitants of the Pelo-IX. ponnesus. The mountain over which the defile leads is still called Treto by the natives; it extends from east to west, along the southern side of the Plain of Nemea. And this defile is all that Pausanias means by "Tretus;" but some persons have believed that there was a town called Tretum, lying to the north of Argos'. We made diligent inquiry after the Cave of the Cave of the Neme@an' Nemeœan Lion, mentioned by the same author; Lion. being well assured that in a country famous for the caverns contained in its limestone mountains, an allusion of this kind would not have been made by so accurate an author without actual reference to some cave having borne this appellation. The guides from Argos knew nothing of it; but the people of Nemea afterwards brought us back again to visit a hollow rock, hardly deserving the name of a cave, although no unlikely place for the den of a lion. As other travellers may be curious to visit it, we shall describe its situation in such a manner

> (1) "TRETUM, petite ville de l'Argolide, presqu'au nord d'Argos. Dans les montagnes près de cette ville, on montroit une caverne où se retiroit, disoit-on, le lion féroce dont les poëtes ont attribué la mort à Hercule," &c. Encyclopédie Méthodique. Géographie Aneienne, par Mentelle. Tome troisième, p.373. à Paris, 1792.

that they may be easily guided to the spot. It is situate upon the top of the mountain, just before the descent begins towards Nemea, but upon the side of it which regards the Gulph of Argos; commanding a view of all the country in that direction. If it be visited from Nemea, its bearing by the compass, from the three columns of the Temple of Jupiter, is due southeast; those columns being on the north-west side of Tretus, and at the base of the mountain; and this cave at the summit, on the contrary side, facing Argos and Nauplia. It consists simply of an overhanging rock in the midst of thickets, on the left side of the road from Nemea to Argos; forming a shed, where the shepherds sometimes pen their folds. As the situation is lofty, we made the following observations by a small pocket compass.

This is the only cave of any description that

we could hear of in the neighbourhood: the CHAP, people of the country knew of no other; and we may consider it as identified with the cave mentioned by Pausanias, from the circumstance of its position upon a mountain still bearing the name of the place assigned by him for its Its distance also from the ruins situation¹. of the Temple, being about a mile and a half, agrees with that which he has stated, of fifteen stadia².

> After regaining the road, the descent from this place soon conducts the traveller into the plain of NEMEA. We passed the fountain of Archemorus, once called Langia, and now Licoriæ. Near to it we saw the Tomb of Ophelles3, at present nothing more than a heap of stones. Pausanias calls the fountain the Adrastéan spring ': a superstition connected with it gave rise to all the sanctity and celebrity of the

RUINS OF NEMEA.

surrounding Grove: victors in the Nemeæan Games received no other reward than a chaplet made of the wild parsley 5 that grew upon its margin; and the herb itself, from the circumstance of its locality, was fabled to have sprung from the blood of Archemorus, in consequence of whose death the spring is said to have received its name⁶. We then came to the Ruins of the Temple TEMPLE OF THE NEMEÆAN JUPITER, which form Nemecean a striking object as the plain opens. Three beautiful columns of the Doric order, without bases, two supporting an entablature, and a third at a small distance sustaining its capital only, are all that remain of this once magnificent edifice; but they stand in the midst of huge blocks of marble, lying in all positions; the fragments of other columns, and the sumptuous materials of the building, detached from its walls and foundations. The mountain Tretus

of the Jupiter.

(5) Victors at the Nemezan Games, according to Plutarch (in Timoleon.) were crowned with parsley said to have sprung out of the blood of Archemorus. "This is the very herb," says Plutarch, "wherewith we adorn the sepulchres of the dead." The Nemezan were funereal games : the Presidents were clothed in black garments.

(6) " Una tamen tacitas, sed, jussu numinis, undas Hæc quoque secreta nutrit Langia sub umbra, Nondum illi raptus dederat lacrymabile nomen Archemorus, nec fama Deæ."-

Statius Thebaid. lib. iv.

makes a conspicuous figure, as seen from this ĆHAP. temple towards the south-east. A poor village, consisting of three or four huts, somewhat farther in the plain to the north of this mountain, and north-east of the temple, now occupies the situation of the antient village of Nemea. It bears the name of Colonna; probably bestowed upon it in consequence of these Ruins. One of its inhabitants, coming from those huts, joined our company at the Temple. He told us that there were formerly *ninety* columns all standing at this place; and the other inhabitants of his little village persisted in the same story. The columns now remaining, and the broken shafts of many other lying near to them, are grooved: they measure four feet ten' inches in diameter. The stones of the foundation of the Temple are of very great size. We observed the wild pear-tree, mentioned by Chandler¹ so many years before, still growing among the stones on one side of the Ruin. He pitched his tent within the cell of the Temple, " upon its clear and level area." Not having such comfortable means of accommodation for the night, we accompanied the

526

IX.

RUINS OF NEMEA.

peasant who had joined us, to the village, where the Tchohadar had already arrived and engaged one of the huts for our reception. The poor Albanians, to whom this little habitation be- Albanians. longed, had swept the earth floor and kindled a fire upon it; the smoke escaping through a hole in the roof: one end of the hut being occupied by their cattle and poultry, and the other by the family and their guests. Having killed and boiled a large fowl, we made broth for all the party; sitting in a circle round the fire. Afterwards, imitating the example offered to us by our host and his family, we placed our feet towards the embers, and stretched ourselves upon the floor of the cottage until the morning. We perceived during the night, that the women, instead of sleeping, were always tending the fire; bringing fresh fuel when it was wanted, and spreading out the embers so as to warm the feet of the men, who were lying around the hearth. When these peasants had taken a short nap, they sate up, and began talking. The conversation turned upon the oppressions of their Turkish masters. The owner of the hut told us that each male is compelled to pay a tax of seventy piastres; that, for himself, having three sons, they demanded of him an annual payment

CHAP.

CHAP. IX.

of two hundred and eighty piastres, besides other contributions; that he toiled incessantly with his children to gain enough to satisfy their demands, but found himself unable, after all his endeavours. Having said this, the poor man shed tears; asking us if the time would ever arrive when Greece might be delivered from: the Moslem tyranny: and adding, "If we had but a leader, we should flock together by thousands, and soon put an end to Turkish dominion." Towards morning, the braying of their donkies set them all in motion. Having asked the cause of the stir, they told us that the day was going to break; and upon further inquiry we learned that the braying of an ass was considered a better indication of the approaching dawn than the crowing of a cock. In the present instance they were certainly not deceived, for we had no sooner boiled our coffee than day-light appeared.

We then returned to the Ruins. Near to the remains of the *Temple*, and upon the *south* side of it, we saw a small chapel, containing some *Doric* fragments, standing upon an antient *tumulus*; perhaps the *Monument* of LYCURGUS, father of *Opheltes*; for this is mentioned by *Pausanias* as a

7 73

Monument of

Lycurgue.

RUINS OF NEMEA.

mound of earth. Scarcely a vestige of the CHAP. grove remains where the triennial games were celebrated; unless a solitary tree, here and there, may be considered as relics¹. The plain all around the Temple exhibits an open surface of agricultural soil. We could discover no trace either of a Stadium or of a Theatre²; both of which are found in every other part of Greece where solemn games were celebrated. When every other monument by which Nemea was adorned shall have disappeared, this tomb, with that of Opheltes, and the fountain of Archemorus upon the slope of the neighbouring hill, will be the only indications of the situation of the sacred grove. The three remaining columns of the Temple of Jupiter are not likely to continue long in their present place: some diplomatic virtuoso, or pillaging Pasha, will bear away these

Pausanias says that the temple was surrounded by a grove of cypresses. Κυπαείσσων τι άλοος ἰστὶν πιξι τὸν ναίν. (Vid. Pausan. in Cor. c. 15. p. 144.) No cypress-tree is now to be seen near the Ruins.

(2) It does not necessarily follow, that if this be the Temple of Nemewan Jove, the Games were celebrated close to the spot where the Temple stands. Sir W. Gell found the remains of a Theatre in his journey from Corinth to Nemea; which, although he does not seem to be aware of the circumstance, may be that of the Nemewan Games. He is just entering the Nemewan Plain or valley; and he says, "Here joins the road leading from Mycenæ to Nemea, which turning to the right, falls into the Valley of Nemea, between the site of a Theatre on the right, and a fount on the left, now dry." See Gell's ltin. of Greece, p. 22. Lond. 1801.

VOL. VI. M M

CHAP. IX. marble relics; and then, notwithstanding the boast of *Statius*¹, the very site of the consecrated games, whether instituted to commemorate Hypsipyle's loss, or the first labour of Hercules², may become a theme of dispute. Perhaps, indeed, the Temple is not of the high antiquity that has been assigned to it. The columns are said not to bear the due proportion which is usually observed in the early examples of Doric architecture³. This edifice may have been erected by Hadrian, when that emperor restored to the Nemexan and to the Isthmian Games their original splendour.

Early this morning, Wednesday, November the eleventh, we began our journey towards SICron, now called Basilico; following the course of the Nemeæan rivulet. This stream is alluded to by Statius, with reference to the fountain before

Nemeæan River.

> (1) ——" manet ingens gloria Nympham, Cum tristem Hypsipylem ducibus sudatus Achæis Ludus, et atra sacrum recolit Triëteris Ophelten."

Statius, Thebaid. lib. iv.

(2) According to *Ælian*, lib. iv. c. 5, *Hercules* transferred to *Cleonæ* the honours bestowed upon him by the *Nemeans*, for subduing the lion.

(3) Sir W. Gell makes the diameters of the columns of the peristyleequal five feet two inches and a half, and observes that the columns are higher in proportion to their diameters than is usual in the **Doric** Order., See Itin. of Greece, p. 23. Lond. 1501.

mentioned⁴. It flows in a deep ravine after CHAP. leaving the plain, and then passes between the mountains which separate the Nemezan Plain from that of Sicyon. On either side of the rivulet the rocks appeared to consist of a whitish chalky limestone. As we rode along the left bank of the rivulet, we saw, upon our right, a table mountain, believed by Chandler⁵ to be the Apesas of Pausanias, where Perseus was Apesas. said to have sacrificed to Jupiter. Its flat top, he says, is visible in the Gulph of Corinth. We passed some ruined Chapels upon our left. Almost every building of this kind in Greece has been erected upon the ruins of some Pagan sanctuary; for which reason they are always worthy of a particular examination. After riding about two hours along the Nemeccan rivulet, we suddenly quitted its course upon our right, and beheld Sicyon, occupying an elevated situation upon some whitish cliffs. Here we noticed a Tomb and Ruins upon our right hand, and immediately descended into the great fertile plain which extends along the Sinus Corin-Sicyonian thiacus, between Sicyon and Corinth. Soon after

Plain.

entering into this plain, we observed, upon our CHAP. right hand, a Chapel, containing Ionic capitals, and other marble fragments. Hence we continued our journey upon a level and highly fertile soil, cultivated like a garden: after crossing a river, we observed, in several places upon our left, the ruins of antient buildings. We then came to the site of the city of SICYON.

Sicyon.

Theatre.

So little is known concerning this antient seat of Grecian power, that it is not possible to ascertain in what period it dwindled from its high pre-eminence, to become, what it now is, one of the most wretched villages of the Peloponnesus. The remains of its former magnificence are still considerable; and, in some instances, they exist in such a state of preservation, that it is evident the buildings of the city either survived the earthquakes said to have overwhelmed them, or they must have been constructed in some later period. In this number is the Theatre; by much the finest and the most perfect structure of the kind in all Greece. The different parts of the city, whereof traces are vet visible, serving as land-marks in pursuing the observations of Pausanias, may be comprehended under the following heads:

- 10. Antient Paved Way.

11. Ruins in the plain below SICYON, towards the sea.

With respect to some of these remains, hardly any thing can be said, but the mere enumeration of the names they bear in this list; but of others, a more particular description may be given. The whole city occupied an elevated situation; but as it did not possess one of those precipitous rocks for its Citadel which sustained the bulwarks of Athens, Argos, Corinth, and many other Grecian States, no vestige of its Acropolis can now be discerned, excepting only the traces of its walls. It is situate above a place now called Palæo-Castro; occupying that part of the Ruins of Sicyon which lies upon the south-east side, towards Corinth. Before we enter upon any further detail of the Ruins here, it may be proper, for the advantage of other

533

CHAP. travellers as well as for perspicuity of description, to state the bearings of some principal objects.

> From the village of Basilico, the THEATRE bears W. N. W. The ACRO-CORINTHUS, or Citadel of Corinth . s. E. and by s.¹ The mountain PARNASSUS, as seen in Phocis . N.

Whether this last object be visible or not, is very doubtful; but it was a place called *Thiva* by the inhabitants, lying in the direction of *Theles*².

Hence it will be evident that the Ruins of Sicyon occupy a prominent part of the Sicyonian territory, extending towards the N.N.E. into the Corinthian Gulph; and that they lie along a ridge above the Plain of Sicyon, in a direction from W.N.W. to E.S.E. having Parnassus due north. The ACROPOLIS, upon the s.E. side of the city, may be recognised, both in the nature of its walls, which are very antient, and in its more elevated situation. Near this place we observed the fragments of architectural

(1) It was highly satisfactory to the author to find his observations by the compass accidentally confirmed by such respectable authority as that of Sir George Wheler, who, observing the bearing of BASILICO from the ACRO-CORINTHUS (See Journ. into Greece, p. 442. Lond. 1682) exactly in the opposite direction, states it to be Narth-west and by North.

(2) Mr. Hawkins is of opinion, that the object referred to in this instance may possibly be the very remarkable conical mountain called Corombila, which overlooks the Gulph of Livodostro.

SICYON.

ornaments, and some broken columns of the Ionic order. Hard by the Acropolis may also be seen the CAVES before mentioned, as in the vicinity of Athens: in all probability they were rather the sepulchres³ than the habitations of the earliest inhabitants, although this cannot now be ascertained: they are all lined with stucco: and Pausanias mentions certain secret recesses⁴ belonging to the Sicyonians, in which particular images were kept for their annual processions to the Temple of Bacchus beyond the Theatre.

(3) The Sepulchres of the Sicyonians in the second century consisted of a heap of earth, above which stood a stélé, resting upon a stone base, and surmounted by a species of ornament resembling the pediment of a temple; or that part of the roof which was called " THE EAGLE." (Vid. Paus. Cor. c. 7. p. 126. ed. Kuhn.) The history of the Eagle upon the Grecian temples is briefly this. The souls of kings, over whose sepulchres temples were originally erected, were believed (oxfirfai) to be carried to heaven upon eagles' wings. At the ritual of the deification of Roman Emperors, after the funeral (Vid. Herodian. lib. iv. cap. 3. tom. I. p. 18C. Argentorati, 1694) it was customary to let an eagle fly from the Campus Martius; and, in allusion to a similar custom, Lycophron calls Achilles asror, an eagle, because he carried about Hector's body. An eagle, therefore, with expanded wings, was formerly represented upon the tympanum of the pediment in all temples ; and, ultimately, this part of the edifice itself received the appellation of AETOE, the Eagle. Ornaments of the same trilateral shape are often seen surmounting the entrances of antient sepulchres, hewn in the rocks of Syria, and of Asia Minor.

(4) "Αλλα δι ἀγάλματα is 'ΑΠΟΡΡΗΤΩΙ Σιχυωνίοις iστί. Pausan. Cor. c. 7. p. 197. ed. Kulmii. 535

CHAP. IX.

There is still an antient paved road that conducted to the Citadel by a narrow entrance between rocks, so contrived as to make all who. approached the gate pass through a defile that might be easily guarded. Within the Acropolis. are the vestiges of buildings, perhaps the Hieron of FORTUNA ACREA, and of the DIOSCURI'; and below it is a fountain, seeming to correspond with that of STAZUSA, mentioned by Pausanias as near the gate². The remains of a temple, built in a very massive style of structure, occurs on the western side of the village of Basilico; and in passing the fosse of the Citadel to go towards the Theatre, which is beyond the Acropolis', a subterraneous passage may be observed, exactly above which the Temple seems to have stood; as if by means of this secret duct persons belonging to the sanctuary might have had ingress and egress to and from the Temple, without passing the gate of the Citadel. This was, perhaps, the identical place called Cosmeterium by Pausanias⁴, whence the mystic images

were annually brought forth in the solemn procession to the Temple of Bacchus, situate near the Theatre and the Stadium. Some of the remains enumerated in the list may be those of Venetian edifices; as, for example, the ruin of the Palace: the palaces of antient Sicyon being highly splendid, and all built of marble. Indeed an expression used by Pausanias seems to imply that the Acropolis, as it existed in his time', was not the most antient Citadel. The sea is at the distance of about a league from Basilico; but the commanding eminence upon which the Ruins are situate affords a magnificent view of the Corinthian Gulph and of all the opposite coast of Phocis. There is, however, no part of the antient city where this prospect is more striking than from the THEATRE. This structure is almost in its entire state; and although the notes we made upon the spot do not enable us to afford a description of its form and dimensions equally copious with that already given of the famous Theatre of Polycletus in Epidauria, yet this of Sicyon may be considered as surpassing every other in Greece; in the harmony of its proportions, in the costliness of the workmanship, in the grandeur of the Coilon, and in the stupendous

(5) 'Es di TH YUY 'Azgoriasi, z. T. A. Paus. ibid.

CHAP.

IX.

IX.

CHAP. nature of the prospect exhibited to all those who were seated upon its benches. If it were freed from the rubbish about it, and laid open. to view, it would afford an astonishing idea of the magnificence of a city whose luxuries were so great that its inhabitants ranked among the most voluptuous and effeminate people of all The stone-work is entirely of that Greece. massive kind which denotes a very high degree of antiquity. Part of the Scene remains, together with the whole of the seats, although some of the latter now lie concealed by the soil. But the most remarkable parts of the structure are two vaulted passages for places of entrance; one being on either side, at the two extremities of the Coilon, close to the Scene, and about half way up; leading into what we should call the sideboxes of a modern theatre. Immediately in front, the eye roams over all the Gulph of Corinth, commanding islands; promontories, and distant summits towering above the clouds. To a person seated in the middle of the Cavea, a lofty mountain with bold sweeping sides appears beyond the Gulph, placed exactly in the centre of the view; the sea intervening between its base and the Sicyonian coast : and this mountain marks the particular part of Baotia now pointed out by the natives of Basilico as (Thiva)

Prospect from the

Cuilon.

THEBES; but to a person who is placed upon the seats which are upon the right hand of those in front, PARNASSUS, here called *Lakŭra* from its antient name *Lycorea*, most nobly displays itself: this mountain is only visible in very clear weather. During the short time we remained in the *Theatre*, it became covered with vast clouds, which at first rolled majestically over its summit, and afterwards concealed it from our view.

The STADIUM is on the right hand of a person Stadium. facing the Theatre: it is undoubtedly the oldest work remaining of all that belonged to the antient city. The walls exactly resemble those of Mycenæ and Tiryns: it may therefore class among the examples of Cyclopéan masonry. In other respects, it is the most remarkable structure of the kind existing; becsuse it is partly a natural, and partly an artificial work. The persons by whom it was formed, finding that the mountain upon which the Coilon of the Theatre had been constructed would not allow a sufficient space for another oblong Cavea of the length requisite to complete a Stadium, built up an artificial rampart, reaching out into the plain from the mountain towards the sea: so that this front-work resembles half a Stadium thrust

CHAP. IX.

Bacchus.

into the semi-circular cavity of a Theatre; the entrances to the area, included between both. being formed with great taste and effect at the two sides or extremities of the semicircle. The antient masonry appears in the front-work so placed. The length of the whole area equals two hundred and sixty-seven paces; the width of the advanced bastion thirty-six paces; and its height twenty-two feet six inches. In front of the projecting rampart belonging to the outer extremity of the Stadium, and at a short distance below it, in the plain, are also the Temple of remains of a Temple; completing the plan of this part of the antient city; which was here terminated, on its western side, by three magnificent structures, a Theatre, a Stadium, and a Temple; as it was bounded towards its eastern extremity by its Acropolis. We can be at no loss for the name of this Temple, although nothing but the ground-plot of it now remain: it is distinctly stated by Pausanias to have been the Temple of Bacchus, which occurred beyond the Theatre to a person coming from the Citadel '; and to this Temple were made those annual processions before alluded to, which took place

> (1) Mirà di ro diargon, Acorvoou rais iori. Paus. Cor. c. 7. p. 127. ed. Kuhnii.

at night, and by the light of torches, when the Sicyonians brought hither the mystic images, called Baccheus and Lysius, chanting their antient hymns^a. Around the Theatre and Stadium, Other Antiquities. besides the traces of this Temple, other ruins may be noticed, but less distinct as to their form. In the plain towards the sea are many more, perhaps extending to the Sicyonian haven, which we did not visit. The Theatre itself was of a much more extensive nature than other edifices of the same kind commonly are: its sides and front projected far into the plain. We were not successful in our search for inscriptions; but the peasants sold to us many medals and small terra-cotta vessels, which they said they had found in caves near the spot. Among the latter we collected lachrymatories of more antient form and materials than any thing we had ever before observed of the same kind. These vessels, as it is well known, were often made of glass, and more antiently of earthenware; being diminutive as to their size, and of delicate workmanship: but the lachrymatory phials, in which the Sicyonians treasured up their

(2) להקונצטיטי לו עודה למולטי דו אעעוישי אמו טעישי ואוצעטינשי. איזודמו עוש our or BAKXEION iropagourin, x. T. 2. Exerce di é xalousines ATTIOZ. Paus. ibid.

CHAP.

IX.

CHAP. IX. tears, deserve rather the name of *bottles'*: they are nine inches long, two inches in diameter, and contain as much fluid as would fill a phial of three ounces; consisting of the coarsest materials, a heavy blue clay or marl. But we also collected little circular cups like small saltcellars, two inches in diameter, and one inch in height, (which are said to be found in great abundance at *Sicyon*,) of a much more elegant

(1) It is observed by the Author's friend, the learned Editor of "Memoirs relating to European and Asiatic Turkey," in a Note of his valuable work, that " the supposition respecting Lachrymatories, as intended to receive the tears of the relatives of the deceased, is now rejected by the most intelligent Antiquaries." See Walpole's Memoirs, p. 323. (Note.) London, 1817. Yet this custom was well known among the Romans, and was more antiently in use among the Eastern nations, especially among the Hebrews. The ampulla, or urnæ lachrymates, were of different materials; some of glass, some of earth. (See Chandler's Life of David, Vol. I. p. 106. Lond. 1766.) Their various forms and magnitude are represented by Montfaucon. In his treatise "De urnulis sen phialis in queis lachrymæ condebantur, quas passim ex sepulchris eruunt," he maintains, from antient Inscriptions, that this custom existed among the Antients. In one of those Inscrip-" tions, the following words occur: " FUSCA MATER, AD LUCTEM ET GEMITUM RELICTA, CUM LACHRYMIS ET OPOBALSAMO UDUM." Vide Antiq. Explanat. tom. V. Part. Prim. cap. 7. p. 117. Paris, 1719. Sometimes the vessels found in antient sepulchres are of such diminutive size, that they are only capable of containing a few drops of fluid : in these instances there seems to be no other use for which they were fitted. Small lachrymal phials of glass have been found in the tombs of the Romans in Great Britain; and the evident allusion to this practice in the Sacred Scriptures, "Put thou my lears into thy botile," (Ps. viii, &.) seems decisive as to the purpose for which these vessels were designed.

SICYON.

manufacture, although perhaps nearly as antient. When we first saw them, we believed that they had been made of pale unbaked clay, dried only in the sun: upon a nearer examination, we perceived that they had once been covered with a red glazing, but that this varnish having been actually decomposed, had almost disappeared. Hence some inference may be deduced as to their great antiquity; instances being hitherto unknown of the spontaneous decomposition of the varnish upon antient terra-cotta vessels. Every person, acquainted with the subject, knows, that the most powerful acids produce no effect whatsoever upon their surfaces, and that some of the oldest terra-cottas yet discovered in Greece are remarkable for the high degree of perfection and lustre exhibited by the black varnish upon their surfaces. The case may be otherwise with the red varnish; and perhaps the examples of pottery found in Grecian sepulchres, and believed to have been made of unbaked clay, with surfaces which moulder beneath the fingers, having a pale earthy aspect, may owe this appearance entirely to the degree of decomposition they have sustained. The medals which we collected here Medula consisted principally of the bronze coinage of Sicyon; having on one side a Dove represented

543

CHAP.

CHAP. flying, and upon the other the letters Σ , ΣI , or IX.

ZIK. Others were also brought to us of the Roman Emperors: among these, there was one with the head of Severus; exhibiting upon the obverse side, a boy upon a dolphin, with a tree. The whole illustration of this subject may be deduced from Pausanias: it relates to a fable on which the Isthmian Games were said to have been founded. The tree is the Pine which was shewn near to the town of Cromion, as a memorial of one of the exploits of Theseus. Near to it stood an altar of Melicerta, who was brought thither by a dolphin, and afterwards buried upon the spot by Sisyphus; in honour of whom the Isthmian Games were said to have been instituted¹. It is always easy to procure bronze medals in Greece; but the Albanian peasants do not readily part with those which are of silver; because they decorate the head-dresses of their women with these pieces. They may, however, be tempted by newly coined paras, which answer the same purpose: we had accordingly provided ourselves with a small cargo, fresh from the mint. In exchange for this base but shining coin, we obtained a few silver medals of Sicyon, and one of uncommon rarity of Pylus

(1) Vid. Pausan. Cor. c. 1. p. 111. cd. Kuhnis.

in ELIS. A single but imperfect impression of this last coin exists in the Collection at Paris. That which we obtained exhibited in front a bull standing upon a dolphin, with the letters $\sqrt{1}$; and for the obverse side an indented square. Any silver medal belonging to these Albanians might be bought of them for a few new paras, not worth a penny; but if paid in old coin, they would not part with one for the same number of piastres. Ibrahim, it is true, had a summary way of settling these matters: by demanding every thing à coup de bâton, he shortened all treaties, whether for horses, food, lodging, or antiquities, by the speedy dispersion of all whom he approached. For this reason, whenever we wished to deal with the natives, we took especial care to send him out of the way. After our return to the village of Basilico, we dismissed Ibrahim with the baggage; and the people finding themselves secure from Turkish chastisement, came round us with their wives and children, bringing all the antiquities they could collect.

We then set out for Corinth. As we descended from the Acropolis, we plainly perceived the situation of the gate to have been in the fosse, above the place where the fountain now is. Here we noticed the remains of the old paved VOL. VI. 545

way; and saw upon our right, close to the road, CHAP. TX: that the rock had been evidently hewn into a PavedWay. square pedestal, for the base of some colossal statue, or public monument. Thence we continued our route across the wide and beautiful plain which extends between Sicyon and Corinth, bounded by the sea towards the north; a journey of three hours and a half, over the finest corn land in Greece, and through oliveplantations producing the sweetest oil in the Fertility of world. This district has been justly extolled the Land. by antient¹ and by modern authors². The wellknown answer of an antient Oracle to a person who inquired the way to become wealthy, will prove how famous the soil has ever been for its fertility: he was told to "get possession of all the land between Corinth and Sicyon." Indeed, a knowledge of the country is all that is necessary to explain the early importance of the cities for which it was renowned. Both Sicyon and Corinth owed their origin to this natural garden: and such is even now its value. under all the disadvantageous circumstances, of Turkish government and neglected cultivation, that the failure of its annual produce would

CORINTH.

cause a famine to be felt over all the surrounding districts³.

547

Within a mile of CORINTH we passed a Fountain in a cavern upon our right; formed by a dropping rock consisting of a soft sand-stone. Farther up the hill, and upon the same side of Corinth. the road, as we entered the straggling town now occupying the site of the antient city, we observed some Ruins, and a quantity of broken pottery scattered upon the soil. The old city occupied an elevated level above the rich plain we had now passed. Upon the edge of this natural terrace, where it begins to fall towards the corn land, we found the fluted shaft of a Doric pillar of limestone, equal in its dimensions to any of the columns of the Temple of Jupiter Olympius at Athens: it was six feet and one inch in diameter. Close to this we observed the ground-plot of a building, once strongly fortified; that is to say, a square platform fronting the plain and the sea: on this side of it is a precipice, and its three other sides were surrounded by a fosse. The area measures sixty-six paces by fifty-three; its major diameter being parallel to the sea shore. Upon the opposite side, within the fosse, are

^{(3) &}quot;And its plenty failing, brings most certainly a famine upon their neighbours round about them." Wheler's Journey into Greece, p. 443. Lond. 1682.

Fountain of the

Nymph Pirene.

IX.

CHAP. also the remains of other foundations; possibly of a bridge or causeway, leading into the area on that side. The remarkable fountain before mentioned does not here guide us, amidst the mazy description of Pausanias, to the original. name of this building. Corinth was full of fountains; there was no city in Greece better supplied with water'; many of those fountains were supplied by means of aqueducts². But if we find a passage in Pausanias that seems to allude to the remarkable circumstance of a dropping spring within a cavern, we may perhaps succeed in establishing a point of observation for ascertaining other objects in its neighbourhood. An allusion of this nature occurs where he mentions the water of the Nymph Pirene, who poured forth such abundance, of tears for the loss of her son Cenchrias. when slain by Diana, that she was metamorphosed into a fountain³. Even the circum-

stance of the cellular cavity whence the water flows appears to have been noticed by Pausanias: in whose time it was beautified with white marble⁴. This weeping spring may therefore be considered the same with that which he has denominated THE FOUNTAIN OF THE NYMPH PIRENE; as it occurs in the road leading from Corinth to Lechæum on the Sicyonian side of the Isthmus, precisely where that fountain was situate. This point being established, we might expect to make the fountain a land-mark for ascertaining the relative position of other objects. But Strabo has given the same name to another spring at the base of the Acrocorinthus; and Pausanias allows that this was not the only fountain called Pirene". The spacious area belonging to the fortress where the Doric pillar lies, relates to a structure so

(4) Paus. ibid. The water of this spring was said to be ππν iδύ. Upon these words Kuhnius adds the following note: "Unde ex hoc fonte aquam petebant in usus domesticos puella Corinthiorum, uti patet exemplo Laïdos adhuc puella ύδοοφορούσης άπό πις Πιιρήνης; lib. xiii. Athenai. Idem hic lib.ii. de fontis hujus aquá: σταθμήσας τὸ ἀπὸ τῆς iv Koρίνθα Πιιρήνης καλουμίνης ὕδως, κουφότερον πάντων ιδεον τῶν κατὰ τὴν 'Ελλάδα, quum ad libram exegissem, inquit, aquam Pirenes fontis Corinthii, levissimam eam omnium in totá Gracia deprehendi." (5) Vid. Paus. in Corinth. c. 5. p. 122. ed. Kuhn. Strabon. Géog. lib. viii. p. 550. ed. Oxon.

CHAP. long rased, that it may have been overlooked by Pausanias, as it was by modern travellers until our arrival: and if this be the case, it may be a relic of the Sisyphéum; a mole, or bulwark, not mentioned by that writer, but noticed by Diodorus Siculus and by Strabo. As Chandler has placed the Sisyphéum elsewhere, we shall presently have occasion to say something further concerning this structure. The Corinthians had also a Hieron to all the Gods¹, where there was a statue of Neptune with a Dolphin spouting forth water; but the water of the dolphin was conveyed by means of an aqueduct, and was not a natural spring².

In going from the area of this building

(1) Otois Taou' ligor. Pausan. in Corinth. c.2. p. 116. Ed. Kuhni. (2) The curious marble discovered by the Earl of Aberdeen at Corintk, and since brought to England, which was found covering the mouth of an antient well, may have been the identical Hieron here alluded to by Pausanias. The word 'Leedy, it is true, is translated Templum by Amasæus; but it does not appear probable that this could be the author's meaning; because he is actually speaking of a TEMPLE (Túxns vais), by which he says the Hieron stood. Mapa di abro diois marin iorin ispon. It is therefore at least probable that all he intends, in this passage, by the word Hieron is the representation of the Heathen Deities upon the marble bas-relief that covered the mouth of a well by which the Temple of Fortune stood. If all the HIERA of Pausanias were to be translated Temples, there would have been more temples in Greece than in the whole world besides.

550

IX.

towards the magnificent remains of A TEMPLE CHAP. now standing above the Bazar whence perhaps the Doric pillar already mentioned may have been removed, we found the ruins of antient buildings; particularly of one partly hewn in the rock opposite to the said Temple. The outside of this exhibits the marks of cramps for sustaining slabs of marble once used in covering the walls; a manner of building, perhaps, not of earlier date than the time of the Romans-Pliny mentions the time when this kind of ornament began to be introduced at Rome'. The Greeks sometimes decorated marble edifices after the same manner, but with plates of metal⁴. In this building were several chambers all hewn in the rock, and one of them has still an oblong window remaining. We then visited the Temple. It has been described by all travellers for near a century and a half. In Wheler's time it had eleven Doric pillars standing': the same number remained when Chandler

(3) " Primum Romæ parietes crusta marmoris operuisse totius domús suæ in Cælio monte Cornelius Nepos tradidit Mamurram Formiis natum, equitem Romanum, præfectum fabrorum C. Cæsaris in Galliá." Plin. Hist. Nat. lib. xxxvi. c. 6. tom. III. p. 477. L. Bat. 1635.

. IX.

IX.

CHAP. visited the place'. We found only seven remaining upright: but the fluted shaft before mentioned may originally have belonged to this building, the stone being alike in both; that is to say, common limestone, not marble: and the dimensions are, perhaps, exactly the same in both instances, if each column could be measured at its base. When Wheler was here, the pillars were more exposed towards their bases; and being there measured, he found them to equal eighteen feet in circumference, allowing a diameter of six feet for the lower part of the shaft of each pillar. Only five columns of the . seven now support an entablature. We measured the circumference of these, (as we conceived, about three feet from their bases,) and found it to equal seventeen feet two inches. Each column consists of one entire piece of stoné; but their height, instead of being equal to six diameters, the true proportion of the Doric shaft according to Pliny, does not amount to four. The destruction that has taken place, of four columns, out of the eleven seen by Wheler and Chandler, had been accomplished by the Governor, who used them in building a house; first blasting them into fragments with

(1) Trav. in Greece, p. 239. Oxf. 1776.

gunpowder. Chandler suspected this temple to have been the Sisyphéum mentioned by Strabo², but without assigning any reason for this con-Sisyphéum. jecture. Nothing can be easier than an arbitrary disposal of names among the scanty relics of a city once so richly adorned; nor can any thing be more difficult than to prove that such names have been properly bestowed. The Sisyphéum was a building of such uncertain form, that Strabo, eighteen centuries ago, could not positively pronounce whether it had been a temple or a palace'; whereas the first sight of this, even in its present dilapidated state, would have been sufficient to put that matter beyond dispute. The Sisyphéum was situate below the Fountain Pirene, and built (AEUR Nile) with white stone; an expression generally used to signify marble, both by Strabo and by Pausanias. The present building does not answer this description. The Sisuphéum is not once mentioned by Pausanias; which could not have been the case, if its remains were of this magnitude. The only antient author by whom the Sisyphéum has been noticed, excepting by Strabo, is

(2) "דשל לו דה הנוחיות דל בוסטקנולי לסדוי, לנפלי דויסה, א המסואנומי, אנטבש Liber Austoinpusson, (sie leg. Casaub.) diaraifor igiinia our oliva. Strabon. Geog. lib. viii. p. 550. ed. Oxon.

CHAP. IX.

IX.

CHAP. Diodorus Siculus; who describes it as a place strongly fortified, near to the Citadel'. As to the real history of this very antient temple, the style and the materials of its architecture have induced some to refer its origin to the earliest periods of the Dorian power in Peloponnessus. We confess we are not quite of this opinion: the disproportion of the length of the pillars to their diameters, is with us an argument, rather against, than for, their high antiquity. If we may credit the testimony afforded by so late a writer as Martin Crusius², founded probably upon tradition, this building was the Temple of Juno; and his statement agrees with Pausanias, who mentions a Hieron of Bunican Juno³, below the Acrocorinthus: but as it amounts almost to 'a certainty, that so considerable a structure must have been mentioned by the latter writer with a more distinct clue as to its situation, there seems to be no edifice noticed by him with which it more accurately corresponds, Temple of than with the TEMPLE OF OCTAVIA, sister of Augustus; unto whom the Corinthians were

CORINTH.

indebted for the restoration of their city: this temple occupied the same situation with respect to the AGORA' that the present Ruin does with regard to the Bazar; and it is well known, that however the prosperity of cities may rise or fall, the position of a public mart for buying and selling usually remains the same. We do not, however, bestow this name upon it; but leave its history to be hereafter determined; when future discoveries, upon the spot, shall have made the antiquities of Corinth better known than they are at present.

While we were occupied in examining this building, and in collecting the different fragments of antient pottery scattered among the Ruins, the Governor sent to desire that we would visit him. We found him sitting in a Visitto the mean little open apartment, attended by one of those French agents, who, under the name of apothecaries, carried on, at this time, a very regular system of espionnage throughout the Turkish empire; and especially in Greece. This gentleman offered to be our interpreter: we told him that we had with us a person who

(4) 'Trip di The 'AFOPAN ister OKTABIAE NAOE, z. T. 2. Paus. Cor. c. 3. p. 116. ed. Kuhnii.

Governor.

CHAP.

IX.

always acted in that capacity; but as the CHAP. IX. Governor seemed to prefer the Frenchman, we acquiesced; and, after the usual ceremony of pipes and coffee, a parley began. The first questions put to us related to our travels; accompanied by many shrugs and shrewd sarcasms as to the vagrant life led by Djours in general. All this was interpreted to us by the Frenchman, interlarded with every scurrilous epithet he could pour forth against the old Turk, but bowing his head all the while with great seeming gravity and decorum, as if he were bestowing upon him the most honourable titles. The Governor was evidently out of temper; and presently the cause was manifest. "Your Tchohadar has been here," said he, " and tells me you intend to take up your abode in this place, that you may repose and take your caif ': but you have brought me no present." We said that we neither gave nor received mere gifts of ceremony. "Then who are ye?" added he, somewhat sharply. "English (Effendies) Gentlemen," was the answer. " Effendies truly ! and is it like an Effendi to be seen picking up

> (1) \dot{z} (Caify or Kafy) is aliment or nourishment in Arab. Dict.; but in Turkey, the word Caif is often used to denote entertainment or comfort.

CORINTH.

pieces of broken pots, and groping among heaps of rubbish?" There was so much apparent reason in this remark, and it was so utterly impossible to explain to a *Turk* the real nature or object of such researches, that we agreed with the Frenchman it was best to let him have his opinion, and, passing quietly for paupers beneath his notice, make our obeisance and retire. This was the first instance, since we quitted the Turhish frigate, in which our firman, and the letter from the Capudan Pasha, had failed in procuring for us a favourable reception; and we began to fear that among the Turks, especially in the distant provinces, our credentials would have little weight, unaccompanied by bribes. Ibrahim, however, maintained that it was all owing to his not being present upon the occasion; and desired us in future to make no visits unaccompanied by him. A few ceremonial expressions, and a little etiquette, were alone wanting, he said; and perhaps he was right.

There is a considerable Ruin consisting entirely of brick-work, which may have been a part of the *Gymnasium*. We were unable to find the *Theatre*, or any remains of a *Stadium*; but close to the *Bazar* we saw part of a very 557

CHAP.

large structure, built entirely of tiles, or thin bricks. The people of the place remembered this more perfect; and they described it as a building full of seats, ranged one above the other. Possibly, therefore, it may have been the Odéum'; unless, indeed, it were an Amphitheatre, or a Theatre raised entirely from the ground, like the Coliséum at Rome; without being adapted to any natural slope. When we reached the house where we were to pass the night, the author was again attacked with a violent paroxysm of fever, and remained until the morning stretched upon the floor in great agony. The air of Corinth is so bad, that its inhabitants abandon the place during the summer months. They are subject to the malaria fever, and pretend to remove it by all those superstitious practices which are common in every country where medical science is little known. We procured some terra-cottas of very indifferent workmanship, much inferior to those found near Argos; also a few medals and gems. There were no Inscriptions; nor was there to be seen a single fragment of antient sculpture. Such is now the condition of this celebrated

CHAP. seat of antient art-this renowned city, once so vain of its high reputation, and of the rank it held among the States of Greece.

We resolved to devote as much of our time as possible to the examination of the Isthmus; for although but a small district, it had been hitherto so imperfectly surveyed by modern travellers, that the site of the Isthmian Games had never been accurately ascertained. Chandler, and his successors, had affirmed that "neither the Theatre nor the Stadium were The mischief arising from such visible²." assertions is this; that the persons who come afterwards, being thereby persuaded that all due diligence has been used in a research which has proved fruitless, willingly avoid the trouble of making any further inquiry. We shall presently shew, not only that remains of the Stadium, of the Temple, and of the Theatre, do yet exist, but that very considerable traces of the Isthmian Town itself may be discerned; plainly denoting the spot once consecrated to the Isthmian solemnities, which continued to be celebrated long after the destruction of the city of Corinth's.

UPON the thirteenth of November we set out for the ISTHMUS. Before leaving the town, there is a fountain upon the left hand; and opposite to it there are the ruins of some antient building. Soon after, we noticed another fountain upon our right: and here may be observed the old paved road leading from the natural platform VOL. VI. 00

CHAP. X. Visit to the Isthmus.

whereon the city stood, into the plain of the X. Isthmus, which lies below this level. We de-~ scended towards it. The vestiges of antient buildings are visible the whole way down. We presently arrived at the neck of the Isthmus, and came to the remains of the antient wall erected by the Peloponnesians, from the Gulph of Corinth to the Sinus Saronicus. The ground here is formed in such a manner as to present a natural Remains of rampart; but there are distinct traces of the old the Antient Vallum; and we saw the ruins of a fortress, or of Vallum. some other building, at its termination upon the Corinthian side of the Isthmus. The remains of another wall may be also traced beyond this, towards the north-east. Here we found what interested us much more, the unfinished Canal Canal of Nero. began by Nero, exactly as the workmen had left it, in a wide and deep channel, extending N.W. and s.E. and reaching from the sea to the N.E. of Lechæum, about half a mile across the Isthmus. It Lechaum. terminates on the s.E. side, where the solid rock opposed an insurmountable obstacle to the work; and here the undertaking was abandoned. Close to the spot where the Canal ceases, are two immense tumuli'; and these, in the general sacking

of Corinthian sepulchres mentioned by Strabo'; CHAP. seem to have escaped violation; for their entrances, although visible, appear never to have been opened since they were closed, and are almost buried. Beneath these tombs there are caves in the rocks: and one of the tumuli seems to be stationed over a sepulchal cavern of this kind. The remarkable accuracy of Pausanias is perhaps in no instance more strikingly manifested than in the description he has given of the Canal; corresponding, even to the letter, with its present appearance³. We followed the Canal to the shore. Here we observed that the rocks had been hewn into steps, for landing goods from the port towards the Canal and other works. The remains of the Temple of Neptune are very considerable. It has not yet ceased to be a place of worship. We found here one of the idol. pictures of the Greek Church, and some antient vases, although in a broken state, serving as vessels and offerings upon the present altar. There is a bath to which they still bring patients for relief from various disorders. A short time

Ù

before our arrival, this antient bath was covered; but wanting materials for building a mill, the inhabitants of a neighbouring village blasted the rocks; and these falling into the bath, have almost filled it. The water of it is very clear and brilliant; its taste slightly brackish, but the saline flavour scarcely perceptible. It comes out of the rock from two holes into the bath, and thence falls into the sea. Great part of the ruined buildings and walls about the bath were carried off when the mill was built. At noon we made the following estimate, by means of our thermometer, of the temperature of the atmosphere; of the water of this warm chalybeate spring; and also of the water of the sea.

Atmosphere, in the shade 68° of Fahrenheit.

Water of the bath, in the shade, 88°.

Cinerary Receptacles in the Rocks. All around this place are sepulchral caves hewn in the rocks near the sea, resembling the burialplaces in the neighbourhood of *Jerusalem*; but the caves here are much smaller; and the recesses within them, instead of being intended as receptacles for bodies, were evidently niches for cinerary urns¹; a mode of sepulture relating

⁽¹⁾ There is an engraved representation of these Caves in Montfaucon's Antiquities, taken from the Travels of M. de Monceaux: but the niches are inaccurately delineated, and they are filled with imaginary urns.

rather to the *Romans* than to the *Greeks*: whence it may be proved that these excavations cannot be more antient than the restoration of *Corinth* by *Julius Cæsar*, and in all probability they are of a much later age.

In the second century the inhabitants of Corinth consisted entirely of the remains of that colony which had been sent thither by the Romans². The original race, with all their customs and habits, had long been removed. In general, we found three niches, placed in a row, in every cave; but in some instances the caves were double; and within each of the chambers there appeared a double row of recesses of different forms, probably adapted, in every instance, to the shape of the vessel intended to contain the ashes of a deceased person; many of them being little arched recesses, and others oblong rectangular cavities suited to the shape of those cinerary receptacles which have been occasionally found, made of marble or of terra-cotta, modelled after the form of a Grecian Soros, but of a diminutive size. Several of these caves remain yet

unopened; and some are entircly concealed, the entrances being either buried beneath large stones, or covered by soil and vegetation.

We spent the rest of this day in the examination of the Isthmus, but observed nothing which could be considered as the slightest indication of the place where the Games were celebrated. Chandler had evidently laid down the spot from an erroneous conjecture', founded upon the observations of Wheler: and as he positively asserts^{*} that neither the Theatre nor the Stadium were visible, it is plain he never visited the part of the Isthmus to which Wheler has alluded'. We determined, therefore, to renew our search upon the morrow; and returned to Corinth, to enjoy the prospect from the Acrocorinthus at the setting of the sun. From the place where the work of cutting the Canal was abandoned, going towards Corinth, the ground rises the whole way to the old Vallum; and there are tombs in the whole acclivity towards the Acrocorinthus. Before arriving at the wall in this direction, there is

ACROCORINTHUS.

a lofty and very entire Tumulus, which is covered CHAP. with a whitish earth and with stones. This, owing to its magnitude and situation, it would Be Tumube very desirable to have opened. According lus. to Pausanias, the sepulchre of Sisyphus was in the Isthmus, although his tomb could not be pointed out⁴. We crossed the 'wall again, and observed in the more antient parts of it some stones of immense size; but where the masonry was more modern the parts were of less magnitude. We visited several antient stone quarries which were very large : all the hills to the left were covered with these quarries: they extend principally in a straight line, east and west.

The stupendous rock of the Acrocorinthus, Acrocorinfrom whatever part of the Isthmus it is viewed, appears equally conspicuous; opposing so bold a precipice, and such a commanding eminence high above every approach to the Peninsula, that if. properly fortified, it would render all access to the Morea, by land, impracticable; and as a fortress, it might be rendered not less secure

(4) Vid. Pausan. in Corinthiac. c. 2. p. 114. ed. Kuhnii. See the Vignette for the situation of this tomb.

thus.

than that of Gibraltar. It was therefore very CHAP. aptly named by an antient Oracle (and in times when the art of war was incapable of giving to it the importance it might now possess) one of the horns which a conqueror ought to lay hold upon, in order to secure that valuable heifer. the Peloponnesus.

> When we returned to Corinth, we found that the Governor, who began to be uneasy at our scrutinizing observations, and considered us as nothing better than spies, would not grant us permission for entering within the Citadel: all that we could obtain was, a privilege of ascending to the summit of the rock, as far as the outside of the gates of the fortress¹. The whole of this ascent, in the time of Pausanias, was distinguished by Hiera stationed at certain intervals", after the manner in which little shrines and other sanctuaries now appear by the way

Ascent to the Citadel. Hiera.

> (1) Lusieri afterwards obtained access to the interior, through the interest of the British Minister at the Porte; but he was narrowly watched the whole time : and during the short stay he made, under the pretence of directing any improvement that might be necessary in the fortifications, he observed no remains of autiquity, excepting the shaft of a small pillar, which perhaps might have belonged to the Temple of Venus.

side, in the passes and heights of mountains in CHAP. Catholic countries. A person unacquainted with the nature of such an ascent, reading his catalogue of the different objects as they occurred, might suppose they were so many temples, instead of niches, shrines, and votive receptacles. In the different contests which NEPTUNE is said to have had for the Grecian territories, one was also assigned to him for the Isthmus and Acropolis of Corinth: and as the watery god disputed with Juno and with Minerva for the possession of the Argive and of the Athenian plains, so, in his struggle to maintain the sovereignty of the Corinthian region; he is fabled to have retained possession of the Isthmus, when the lofty rock of the Citadel was adjudged to THE SUN; a fable founded on no very dark tradition respecting the existence of this mountain above the waters of the sea, long before they had entirely abandoned the plain of the Isthmus. That the Peloponnesus had been once an island, was not only an opinion of the Antients concerning it, but a memorial of the fact is preserved in the name it always retained' of

(3) MEAOHOE NHEOE. (Vid. Strabon. Geog. lib. vii. p. 465. Oxon. 1807.) Πέλοπος μίν in της Φρυγίας επαγομένου λαόν είς την άπ' αυτου ×ληθείσαν ΠΕΛΟΠΟΝΝΗΣΟΝ, z. τ. λ.

X.

CHAP. "the Island of Pelops." The antiquities, as they X. were noticed by Pausanias', in the ascent of the Acrocorinthus, are as follow : two shrines of Isis; two of Serapis; the altars of the Sun; and a Hieron called that of Necessity and Violence, wherein it was not lawful to enter. It is difficult to understand what was meant by this last; unless it were a place of refuge, like some of the sanctuaries in Italy, into which it is unlawful to follow any fugitive offender who has there sheltered himself from pursuit. Above this was a Temple (vaos) of the Mother of the Gods; a Stélé; and a Seat (θ_{20005}) of stone. There seem also to have been fanes consecrated to the Parcæ, containing images which were not exposed to view; and near to the same spot, a Hieron of Juno Bunæa. Upon the summit itself stood another Temple (vade) of Venus. In all this list, there is mention made of two structures only which can properly be considered as temples; that is to say, the Temple of Venus upon the summit of the rock; and that of the Mother of the Gods at some resting-place where there was a seat, perhaps about half way up. Fragments of the former will probably be

(1) Vid. Pausan. in Corinthiac. cap. 4. p. 121. ed. Kuhnii.

ACROCORINTHUS.

discovered by future travellers who have liberty to inspect the materials used in constructing the foundations and walls of the citadel. All that we observed, in going up, were the remains of an antient paved way near the gate of the fortress, and the capital of an Ionic pillar lying near the same place. We reached this gate Prospect just before sun-set; and had, as it is always from the Summit of usual from the tops of any of the Grecian mountains, a more glorious prospect than can be seen in any other part of Europe. Wheler calls it "the most agreeable prospect this world can give "." As from the Parthenon at Athens we had seen the Citadel of Corinth, so now we had a commanding view, across the Sinus Saronicus of Salamis, and of the Athenian Acropolis. Looking down upon the Isthmus, the shadow of the Acrocorinthus, of a conical shape, extended exactly half across its length, the point of the cone being central between the two seas. Towards the north we saw Parnassus covered with snow, and Helicon, and Cithæron. Nearer to the eye appeared the mountain Gerania, between Megara and Corinth. But the prospect which we surveyed was by no means so extensive as that

the Acrocorinthus.

CHAP. seen by Wheler; because we were denied admis-- sion to the fortress, which concealed a part of the view towards our right. We noted, however, the following bearings by the compass from an eminence near the gate:

> . . . Point of Olmiæ Promontory. North . North and by East . . . Helicon. North-East and by North, Summit of Gerania. East North East . . . The Isthmus of Corinth, lying E. N. E. and W. s. w. And beyond it, in the same direction, the summit of Cithæron. East Port Schænûs; and beyond it, exactly in the same direction, Athens.

North and by West . . Parnassus. North-West and by North, Sicyonian Promontory.

Discovery of the Town of

Isthmus.

On Saturday, November the fourteenth, we again mounted our horses, and set out for a village still bearing the name of Hexamillia, being Hexamillia situate where the Isthmus is six miles over, and where the antient town of the same name formerly stood. We had been told that we should be able to purchase medals here of the Albanians; accordingly, we provided ourselves with a quantity of newly-coined paras, to barter in exchange for them. When we arrived, the number of medals brought to us, and their

ISTHMUS OF CORINTH.

variety, were so great, that we demanded of the CHAP. peasants where they had found them in such abundance? One of the inhabitants, who spoke the Modern Greek, said they all came from a Palæo-Castro to which they often drove their flocks; described by them as being near to a small port at the extremity of the Isthmus upon Port the side of the Gulph of Engia, towards Megara. This could be no other than the Port Schænus: and the mere mention of this important appellation, Palæo-Castro, filled us with the most sanguine expectations that we should here find, what we had sought with so much earnestness, the site of the Isthmian solemnities. Such a variety of coins belonging to different and to distant States of Greece, all collected upon one spot, could only be accounted for by a referrence to the concourse so often assembled. in consequence of the Sacred Games, from all parts of Hellas and of Peloponnesus. We therefore took one of the peasants as, our guide to the Palæo-Castro; and leaving the others to collect medals from the different cottages, promised to return in the evening, and to purchase all they might be able to procure. Antient stone quarries are numerous in the hills above Hexamillia. Beyond this village, towards Mount Oneius,

573

X.

Schenus.

574

CHAP. which rises to the north of Schanus Port, we thought we observed the form of an antient Theatre, of which nothing but the Coilon exists; neither a seat nor a stone remaining. We then rode directly towards the port and the mountain; and, crossing an artificial causeway over a fosse, we arrived in the midst of the Ruins. A speedy and general survey of the antiquities here soon decided their history; for it was evident that we had at last discovered the real site of the Isthmian Town, together with the Ruins of the Temple of Neptune, of the Stadium, and of the Theatre'. The earth was covered with fragments of various-coloured marble, grev granite, white limestone, broken pottery, disjointed shafts, capitals, and cornices. We observed part of the fluted shaft of a Doric column, which was five feet in diameter. A: sary; and we proceeded immediately to trace the different parts of this scene of desolation, and to measure them in detail.

We began first to mark, with as much precision

5-7

· · · · · · · · · · ·

(1) Vid. Pausan. in. Corinth. cap. 1 & 2. pp. 111, 112, 113, 114. Ed. Kuhnii.

as possible, the site of these Ruins, with re- CHAP. ference to other objects, that future travellers (in direct contradiction to the statement made by Chandler) may be guided to the spot, and become satisfied of their existence. The best. method of finding their precise situation is to: attend to the course of the wall which traverses. the Isthmus; for this, if it be traced from the Corinthian Gulph, will be found to make a sudden turn before it reaches the shore of the Sinus Saronicus, and to bear away towards Mount Oneius, embracing the whole of the Port of Schanus, and closing it in upon the Corinthian side. The ruins of the Temple, Stadium, Theatre, together with wells, and other indications of the Isthmian Town. surround this port; and they are, for the most part, situate upon its sides, sloping towards the sea. The remains of the Temple of Neptune Temple of are to the west of the Isthmian Wall; upon an Neptune. area which is two hundred and seventy-six paces in length, and sixty-four in breadth. A Greek Chapel, also in a ruined state, now stands upon the area of the temple; and this seems to have been the identical building mentioned by Wheler, near to which he found the Inscription published by him, relative to many edifices, not mentioned by Pausanias, that were repaired by Publius Licinius Priscus

575

х.

CHAP. X.

Juventianus¹. Indeed it is wonderful, considering the notice given by him of the Ruins here, that the site of them should afterwards be lost. The materials of the temple are of a white limestone[°]; and the workmanship of the capitals, the fluting of the columns, and of other ornamental parts of the structure, are extremely, beautiful. Not a single pillar remains erect: the columns, with their entablatures, have all fallen. The building, by its ruins, appears to have been of the Corinthian order; but there are remains of other edifices in its neighbourhood where the Doric order may be observed, and where the columns are of greater magnitude than at this temple. We measured some of the shafts of columns here that were only two feet nine inches in diameter: and this agrees with a remark made by Pausanias, who states that the dimensions of the Temple were not extraordinary". The capitals are for the most part destitute of the rich foliage of the acanthus, although finished with exquisite taste and in

(1) "Journey into Greece," Book vi. p. 438. Lond. 1682.

(2) Called by Pausanias *hills*, *hunds* (vid. p. 112. Corinthiac. c. 1. ed. Kuhnii); but this is an expression often applied by him where marble has been used.

(3) To rao de orre morilos ou preisere, a. T 2. Ibid.

the most masterly style of sculpture. Among CHAP. х. seven or eight of these capitals, we found only one with the acanthus ornament: yet the edges of the canelure upon all the shafts of the columns at this temple were flattened, and not sharp as in much larger pillars which we observed higher up towards the wall. We found also a *pedestal*, which measured at its base four feet and four inches. The fallen architraves and other parts of the entablature also remain. To the south wall of the area ofthe Temple adjoined the Theatre; the Coilon of Theatre. which, almost filled and overwhelmed by the ruins of the Temple and by the effect of earthquakes, yet remains, facing the Port Scheenus West of the Theatre is the Stadium⁴, at right stadium. angles to the Isthmian Wall: it has very high sides; and even in its present state, the stone: front-work and some of the benches remain at its upper end, although earthquakes or torrents have forced channels into the arena. It extends east and west, parallel to one side of the area of the Temple, to which it was adjoined. Just at the place where the Isthmian Wall joins

 VOL. VI. P P

CHAP. x. Sepulchre of Palæmon. Mount Oneius, is a Tumulus, perhaps that which was supposed to contain the body of MELI-CERTES; in honour of whose burial the Isthmian. Games were instituted, above thirteen hundredyears before the Christian æra. It stands on a very conspicuous eminence above the wall, which here passes towards the south-south-east, quite to the port, after reaching the mount. There was within the sacred Peribolus. according to Pausanias', a temple dedicated to Melicertes, under his posthumous name of Palæmon²; and it contained statues of the boy and of his mother Leucothea, and of Neptune. The situation, therefore, of the Tomb, being almost contiguous with the Peribolus, is very remarkable; the whole of these magnificent structures, the Temples, the Theatre, the Stadium, and the ISTHMIA themselves, having originated in the honours paid to his sepulchre. Going from the Stadium towards this wall, we found fragments of Doric columns, whose shafts were near six feet in diameter; the edges of the canelure being sharp: these were of the

(1) Vid. Pausan. in Corinthiac. c. 2. p. 113. ed. Kuhnii.

(2) Ἐξινιχθίντος δὶ ἰς τὸ Κορινθίων Ἱσθμὸν ὑπὸ διλφῖνος (ὡς λίγιται) τοῦ παιδὸς, τιμαὶ καὶ ἄλλαι τῷ ΜΕΛΙΚΕΡΤΗΙ δίδονται μιτογομασθίντι ΠΑΛΑΙ-ΜΟΝΙ, καὶ ΤΩΝ ἹΣΘΜΙΩΝ ΕΠ' ΑΥΤΩΙ ΤΟΝ ΑΓΩΝΑ ΑΓΟΥΣΙ: Pausan. Altica, c. 44. p. 108. ed. Kuhnii.

same white limestone as the rest. But among all CHAP: the remains here, perhaps the most remarkable as corresponding with the indications left us by Pausanias of the spot, is the living family of tors in the Isthmia those Pine-trees, sacred to Neptune, which were crowned. he says grew in a right line, upon one side, in the approach to the Temple; the statues of victors in the Games being upon the other side'. Many of these, self sown, are seen on the outside of the wall, upon the slope of the land facing the port⁴. They may also be observed farther along the coast; exactly corresponding with a remark made by the same author, who relates, that in the beginning of the "Isthmus there were *Pine-trees*, to which the robber Sinis used to bind his captives'. Every thing conspires to render their appearance here particularly interesting: the victors in the Isthmia were originally crowned with garlands made of their leaves, although chaplets of parsley

(3) 'באלטידו לו וֹן דטע לנטע דל וופטי, דטעדם עוֹז מאאחדשי דובחסמידשי דע "נסלעות ίστήπασι είπόνες, τούτο δε ΠΙΤΤΩΝ ΔΕΝΔΡΑ ίστε σεφυτευμένα Ιπε στοίχου Tà Tellà is sido abrar avizorra. Pausan. Corinth. c. 1. p. 112. ed. Kuhnii.

(4) This Pine is a variety of the Pinus sylvestris, commonly called Pinus maritima. Wheler called these trees "Sea Pines with small cones." See Journey into Greece, p. 446. Lond. 1682.

X.

Trees from

which Vic-

CHAP. were afterwards used instead of them': they are particularly alluded to by Pausanias, as one of the characteristic features of the country: and that they were regarded with a superstitious veneration to a late age, appears from the circumstance of their being represented upon the Greek colonial medals, struck in honour of the Roman Emperors. Allusion was made in the last Chapter to a bronze medal found at Sicyon, whereon one of these trees is represented. with the boy Melicertes upon a dolphin.

> The vicinity of these Ruins to the sea has very much facilitated the removal of many valuable antiquities, as materials for building; the inhabitants of all the neighbouring shores having long been accustomed to resort hither, as to a quarry: but no excavations have hitherto taken place. Persons have been recently sent from England to carry on researches, by digging upon the site of the antient cities and temples of Greece, and it may therefore be hoped that this spot will not remain long neglected. There is no part of the country which more especially.

> 1) Archbishop Potter observes, that "the use of parsley was afterwards left off, and the Pine-tree came again into request ; which alteration Plutarch has accounted for in the fifth book of his Symposiacks," (Quæst. 3.) Archæologia, vol. I. c. 25. p. 457. Lond. 1751.

X.

requires this kind of examination. The concourse to the ISTIMIA was of such a nature, and continued for so many ages, that if there be a place in all *Greece* likely to repay the labour and the expense necessary for such an undertaking, it is the spot where these splendid solemnities were held. Indeed this has been already proved, in the quantity of *medals* found continually by the peasants of *Hexamillia* among the Ruins here: and the curious *Inscription* which *Wheler* discovered lying upon the area of the *temple*² affords reasonable ground for believing that many other documents, of the same nature, might be brought to light with very little difficulty.

In returning from the site of these antiquities to *Hexamillia*, we observed several *tombs* by the side of the old road which led from *Corinth* to the town of *Isthmus*, exactly similar to the mounds we had seen in *Kuban Tahtary*. This primeval mode of burial, originally introduced into *Greece* by the *Titan-Celts*, continued in use among the *Corinthians*; for *Pausanias*, speaking of the antient inhabitants, says, that they

CHAP. interred their dead always beneath a heap of x. earth.

As soon as we arrived at Hexamillia, the inhabitants of both sexes, and of all ages, tempted by the sight which they had already gained of the new paras, flocked around us, bringing carpets for us to sit upon in the open air; and a very curious market was opened for the sale of a single commodity; namely, the antient medals found at different times among the Ruins we. had visited. The young women wore several silver medals mixed with base coin, as ornaments, in a kind of cap upon their foreheads, and among their hair. These they were not very willing to dispose of; but the temptation offered by the shining paras was not to be resisted, and we bought almost all we saw. The bronze coins were in great number :, but we obtained many very curious medals in silver; and among these, the most antient of the city of Corinth, in rude globular forms exhibiting the head of Pallas in front, within a square indented cavity; and upon their obverse sides, those antique figures of Pegasus, in which the wings of the horse are inflected towards the mane. The medals with this die have been sometimes confounded with those of Sicily; but we obtained

Extraordinary Mart for Grecian Medals.

CORINTH.

one on which appeared, in Roman characters, CHAP: the letters COR. One of the most curious things which we noticed among our acquisitions, was an antient forgery; a base coin of Corinth, made of brass, and silvered over. The others consisted of silver and bronze medals, of Alexander the Great; of Phocis; of Tanagra in Bœotia; of Megara; of Alea in Arcadia; Argos; Sicyon; Ægina; and Chalcis; together with a few Roman coins, and some of less note. We were surprised by not finding among them any of Athens: which are common enough elsewhere. When we had concluded our business in Hexamillia, we returned again to Corinth; and saw, in our road, the remains of some buildings, evidently Roman, from the appearance of the opus reticulatum in the masonry: among these was the Ruin of a large structure, which seemed to have been an aqueduct.

- CFIS 1:5

To MAN CA

It was late when we reached our quarters. Two of the Levant Consuls sate with us during the evening. Their uniform combines, in a Dress of singular manner, the habits of Eastern and Consuls. Western nations: it is a long dress, with a three-cornered hat, a bag wig, and an anchor on the button of the hat.

the Levant

X.

CHAP. X. Pandæan Horn.

On Sunday, November the fifteenth, there was a fair in Corinth. We saw nothing worth notice, except an Arcadian pipe, upon which a shepherd was playing in the streets. It was perfectly Pandæan; consisting simply of a goat's horn, with five holes for the fingers, and a small aperture at the end for the mouth. It is exceedingly difficult to produce any sound whatever from this small instrument; but the shepherd made the air resound with its shrill notes: and we bought his pipe. This day we left Corinth entirely. The Bey positively refused to allow us to proceed by land to Megara: we therefore engaged with a couple of men who had a boat stationed in the harbour of Cenchrea; to take us along the coast. In our way to that harbour, we again visited the village of Hexamillia; and, after passing the same, we perceived that the Stone Quarries, the remains of the Isthmian Wall, and of the Town of Isthmus at its eastern extremity, are seen forming a high ridge upon the left hand, parallel to the mountains upon the right. The Remains at CEN-CHREÆ faithfully correspond with the description given by Pausanias of the place'. We

Conchrea.

(1) Vid. Pausan. in Corinth. c. 2. p. 114. ed Kuhn.-The place is now called by its antient name, pronounced Cenchri.

ISTHMUS OF CORINTH.

visited the Bath of Helen: it is formed by a spring, which here boils up with force enough to turn a mill, close to the sea. We found no Helen. difference of temperature, whether the thermometer were placed in the water of this spring, or in the sea, or exposed in the shade to the air of the atmosphere at mid-day. The three trials gave exactly the same result; -64° of Fahrenheit. The men we had hired did not return from the fair; so, after waiting for some time, we procured another boat, and went to a village, the name of which was pronounced Convangee2, where we passed the night. The Convangee. next morning, at sun-rise, we embarked again. The wind proved contrary. We landed, and reached a miserable hamlet, consisting only of six houses, called Carneta or Canetto, upon the site of the antient CROMYON. Its wretched Cromyon. inhabitants, a set of sickly-looking people, in the midst of very bad air, had never seen a glove, and expressed the utmost astonishment at seeing a person take one off his hand. Notwithstanding the insalubrity of the situation, and the unhealthy looks of the people, there was no

CHAP. X. Bath of

CHAP. appearance of poverty or misery within their cottages. The houses, like those of the Albanians in general, were very neat, although the cattle lodged with their owners beneath the same roof: The resemblance which the Albanians bear to the Highlanders of Scotland, in their dress, habits, and mode of life, is said to be very striking in a land which is more peculiarly their own¹, and where their employments are less agricultural than in the Morea; but even here we could not avoid being struck with appearances, forcibly calling to mind the manners and customs we had often witnessed among Caledonian heaths and mountains. The floors were all of earth; and instead of chimnies there was in every cottage a hole through the roof; but the walls were neatly white-washed, and the hard earthen floors were swept, and made as clean as possible. Every house had its oven, which was kept remarkably clean; and the whitest bread

> (1) There is an observation upon this subject by Lord Byron, in the Notes to his deathless Poem, " Childe Harold's Pilgrimage." "The Arnaouts, or Albanese, struck me forcibly by their resemblance to the Highlanders of Scotland, in dress, figure, and manner of living. Their very mountains seemed Caledonian, with a kinder climate. The kilt, though white; the spare, active form; their dialect, CELTIC in. its sound; and their hardy habits, all carried me back to Morven." Childe Hurold's Pilgrimage, Notes to Canto II. p. 125. Lond. 1812.

was set before us, with the richest and most CHAP. highly-flavoured honey. The fire being kindled in the middle of the floor, the peasants form a circle around it, sitting or lying with their feet towards the hearth. Their conversation is cheerful and animated; and, as it was interpreted to us, it seemed to be filled with as lively sallies of wit against the faults of their Governors, as it is usual to hear among nations boasting of the freedom they enjoy. We could not hear of any antiquities in the neighbourhood; nor did we expect even a tradition of the Cromyonian sow, or any other exploit of Theseus in the Straits of Peloponnesus, among a people who are not the indigenous inhabitants of the country. A single black terra-cotta vessel, of small size, and shaped like a bottle, found in some sepulchre near the place, was the only relic of antient Cromyon that we were able to procure.

Monday, November the sixteenth, the wind continuing still contrary, we hired asses, and determined to proceed by land; being now safe from interruption on the part of the Governor of Corinth, and relying upon the Albanians for protection, who are generally considered as the only persons exercising the Scironian profession

PELOPONNESUS.

Scironian Defile.

in these parts. At the same time, we sent the boat to Megara with our baggage. In our road we saw a great number of those pines, or pitchtrees, alluded to by authors with reference to the history of the famous robber Sinis'; who, first bending their stems to the earth, fastened his prisoners to the branches, so that when the trees, by their elasticity, sprang up again, the bodies of his captives were torn asunder. We passed under the Scironian rocks: their appearance is very remarkable, and likely to give rise to fabulous tales, if they had been situate in any other country. They consist of breccia, which here, as in the Isthmus of Corinth, and indeed over all the north of Peloponnesus, and in Attica, lies upon a stratum of limestone. The breccia of the Scironian rocks presents, towards the sea, a steep and slippery precipice, sloping from the narrowest part of the Isthmian Strait towards the Sinus Saronicus. It is so highly polished, either by the former action of the sea to which it is opposed, or by the rushing of torrents occasionally over its surface, that any person falling from the heights would glide as over a

(1) "Εστι δι ιτί του 'ισθμου της άρχης, ανθα ό ληστής ΣΙΝΙΣ λαμβανόμινος πισύων, ήγιν is το κάτω σφας. Pausan. Corinth. c. 1. p. 111. ed. Kuhnid.

surface of glass; and be dashed to pieces upon CHAP. the shore, or, in some parts of the precipice, fall into the waves. The Story of Sappho has given the name of "The Lover's Leap" to at least a dozen precipices, in as many different parts of the world; and this is one of the places whence Ino is said to have precipitated herself, with her son Melicertes². Hence also the old stories of the dangers to which travellers' were exposed in the narrow pass above the SCIRONIA SAXA, from the assaults of SCIRON. who, it was said, compelled them to wash his feet, and then kicked them down these precipices into the sea. Not only were the rocks called Scironian, but the road itself was named SCIRON. It was said to have been enlarged by the Emperor Hadrian; but we found it to be so narrow, after we had gained the heights, that there was barely room for two persons on horseback to pass each other. A lofty mountain above the pass, covered with snow during the greater part of the year, is called Gerao, the antient Gerania³. We had seen it from the Pass of Tretus, near the Cave of

(2) Vid. Pausan. in Attic. c. 44. p. 108. ed. Kuhnii.

PELOPONNESUS.

CHAP. the Nemeæan Lion, in our journey from Mycenæ to Nemea. There is a town near this mountain, . . called Calaverti. We soon came to the antient Paved Way leading from Attica into Peloponnesus; and arrived at the Wall and arched Gate, high above the sea; where, in the narrow strait, is still marked the antient boundary between the Boundary between two countries. The old portal, once of so much Peloponnesus and importance, is now a ruin; but part of the stone-HELLAS. work, mixed with tiles, which was above an arch, yet remains on the side of the mountain; and beyond it, on the side of Attica, we saw more of the old paved road. The place is now called Katche Scala; a modern method KAKH ΣKAAA. of pronouncing Kazy Zzála, the Bad Way. The defile was always considered as full of danger to the traveller; and it maintains its pristine character. The Turks never pass it without the most lively apprehensions; expecting to be attacked here by banditti. Ibrahim, that he might avoid this pass, had preferred a tedious and turbulent passage in the boat with our baggage. For our parts, we reposed so much confidence in our worthy Albanians, that we never bestowed a thought upon the chance of meeting robbers; and they liked our society the better because we were not accompanied by a Turk. Close to the Scironian Gate we

ENTRANCE OF HELLAS.

observed a prodigious block of white marble, - CHAP. lying out of the road, upon the brink of the precipice; which had been thrown down, and had very nearly fallen from the heights into the sea. There was an inscription upon it, perhaps relating to the widening of the pass, and to the repairs of the road by Hadrian; but we could only trace a semblance of the following letters :

OA ΟΙΟΝΑΙΑΘΩΝΔΩΙΟ

At the place where the Arch stood, was perhaps formerly the Stélé erected by Theseus; inscribed on one side, "HERE IS PELOPONNESUS, NOT IONIA;" and upon the other, " HERE IS NOT PELOPONNESUS, BUT IONIA." Having passed Entrance the spot, we now quitted the Morea, and once more entered HELLAS', by the Megarean land.

of Hellas.

We began to descend almost immediately; and, as we had expected from the frequent instances which characterize the Grecian cities, we no sooner drew nigh to MEGARA, than the prospect of a beautiful and extensive plain opened before us, walled on every side by mountains, but in this example somewhat

CHAP. X. Causes of the celebrity of Megara.

elevated above the usual level of such campaign territories. From a view of this important field, it must be evident that the town of Megara owed its celebrity more to its fertile domain, than to its position with respect to the sea; yet it is natural to suppose that the inhabitants of this country were fishermen and pirates, before they turned their attention towards the produce of the soil. Plutarch believed, that the fabled contest between Neptune and Minerva, for Attica, was an allusion to the efforts made by the antient kings of the country, to withdraw their subjects from a sea-faring life, towards agricultural employments '. Be this as it may: when both were united, and the convenience of a maritime situation was superadded to the advan-, tages of inland wealth, it might be expected that Megara was able to make so distinguished a figure as she formerly did, in the common cause. At the battle of Salamis she furnished twenty ships for the defence of Greece; and at Platæa numbered her three hundred warriors in the army of Pausanias. The city existed above eleven centuries before the Christian æra; and, in the days of its splendour, it boasted its

(1) Vid. Plutarch. in Thes. p 87. 1. 23.

- s'stans se l

peculiar sect of philosophers. Its situation also with respect to Peloponnesus added to its consequence; being the depository of all goods intended for conveyance over the Scironian defile. As the traveller descends from this pass, it appears upon a rock, which is situate upon the edge of an immense quadrangular plain extending towards the left of the spectator; the site of The modern the present town being close to that corner of it Town. which is towards the sea, and nearest to *Eleusis*. Upon our left, just before we arrived, we saw a large Tumulus, on which there seems to have stood some considerable monument. The place is much altered, even since Wheler's time; but the inhabitants retain many old Grecian customs. We saw them roast a large goat entire, upon a pole, in the middle of the public street. It was from Megara that Cicero, in his letters to Atticus, desired his friend to send him two specimens of Grecian sculpture. Formerly it was famous for its earthenware; and fine vases have been found here by modern travellers: but we were not fortunate in our inquiry after terra-cottas : we procured only a few fragments of a bright red colour, beautifully fluted, that we found lying among the ruins of the city. We had better success in our search for Inscriptions : although Inscriptions. it may be said of Megara, (whose antiquities in

the second century occupied, in their mere enumeration, six chapters of 'Pausanias' description of Greece,) that, excepting its name, it retains hardly any thing to remind us of its former consideration. The first Inscription that we found here was " in honour of Callinicus, Scribe and Gymnasiarch." It was written upon a large stone, twelve feet in length, placed in front of an antient gateway leading from the city towards the sea. This is the identical Inscription which Wheler has published "; and we discovered it exactly as it was left by him. The next is an Inscription which he did not observe; and it is much worthy of notice. We saw it at the house of the Archon where we lodged : it is in honour of HADRIAN, whose usual titles are added. From the title of OLYMPIUS, once bestowed by the Athenians upon Pericles', and answering to AIOS, we are able to ascertain the date of this Inscription; which is of the year of Christ 132⁴. It sets forth, that under the care of Julius the Proconsul, and in the Prætorship of

(1) Fragments of the Lapis Conchites mentioned by Pausanias (Attic. c. 44. p. 107. ed. Kuhnii), and vestiges of the "long walls," were observed at Megara, by Mr. Walpole and Professor Palmer.

We copied a few other *Inscriptions*; but some of them are already published⁵, and the others are in too imperfect a state to be rendered intelligible. The *medals* brought by the inhabitants were few in number, and badly preserved⁶.

(5) See Wheler's " Journey into Greece," p. 432, &c.

(6) Bronze coins, with an entire legend, METAPE ΩN , are in the collection at *Paris*, exhibiting the head of *Apollo* in front, and for reverse a *Lyre*: but these seemed to have belonged to a city of *Sicily*. The medals of the *Attic Megara* exhibit in front the prov of a skip;

Ionic and Doric capitals, of white limestone and. CHAP. of marble, lie scattered among the Ruins, and in the courts of some of the houses. The remains of the "long walls" which inclosed the land between Megara and the sea, and connected the *city* with its port, are yet visible; and within this district, below the present town, some pieces of fine sculpture were discovered, and long since carried away. Here is also a Well, supposed to be that fountain mentioned by Pausanias', as adorned by Theagenes, and sacred to the Sithnides: near to which there was a Temple, containing the works of Praxiteles. A modern superstition belonging to this Well* seems to agree with the circumstances of its antient history, and thereby to identify the

> and for their obverse, either a Tripod between two Dolphins, or the two Dolphins without the Tripod. The author has never seen a silver medal answering this description; but as a proof that these are medals of the Attic and not of the Sicilian Megara, it should be mentioned, that they are found here upon the spot; and the circumstance of his having found them in abundance upon the neighbouring Isthmus of Corinth may be also alleged as presumptive evidence of the fact. The oldest medals of Megara that he has seen, exhibit two Dolphins in front ; and for reverse merely a square indentation : and these were found by him at Hexamillia in the Isthmus.

CHAP. spot; which may be of consequence to future travellers, who visit Megara for the purpose of \xrightarrow{x} making excavations.

Thursday, November the seventeenth, we began Journey our journey from Megara towards Eleusis and Athens, filled with curiosity to examine the vestiges of the Eleusinian Temple, and over a tract of land where every footstep excites the most affecting recollections. By every antient well and upon every tomb at which the traveller is induced to halt, and to view the noble objects by which he is surrounded, a crowd of interesting events rush into his mind; and so completely fill it, that even fatigue and fever, from which he is seldom free, are for a moment forgotten. As we left Megara, we had a magnificent view of the Saronic Gulph, and of the Island Salamis, the scene of the great naval engagement, where three hundred and eighty sail of the Grecian fleet defeated the vast armament of Xerxes, amounting to two thousand ships. The distance between Megara and Eleusis, according to the Antonine Itinerary, is thirteen miles. After travelling half an hour, we observed, in the plain upon our right, the remains of a building which seemed to have been an antient Temple; and one

. . These of the second

mile farther, we saw a similar ruin upon an eminence by the same side of our road. The plain here is beautiful and fertile. When Wheler passed, it was covered with anemonies'. Another ruin appeared also upon a hill a quarter of a mile nearer to Eleusis; and a little beyond this, upon the left, close to the road, we saw two Tombs opposite to each other. Afterwards, we came to a Well, at which our guides stopped to water their mules. Soon after passing this well, we saw another Tomb, and many heaps of stones, as of ruined structures, upon our left. The Reader, comparing these remains with the account given by Pausanias, may affix names to them according to his own ideas of their coincidence with his description. An author would not be pardoned who launches into mere conjecture with regard to anyone of them. We then began to ascend a part of the mountain Kerata, so named from its double summit, and now called Gerata. We saw upon the shore below us a few houses, and an appearance as of an antient Mole, projecting into the sea; yet no author has mentioned the existence of any

(1) Journey into Greece, p. 439. Lond. 1682.

maritime establishment between the two cities of Megara and Eleusis. Hence we descended into the Eleusinian Plain; spreading out with indescribable Eleusinian beauty, as in the instances so often noticed; the surrounding mountains seeming to rise out of it: this was that fertile land which is said to have invited the first labours of the plough; and where the first wheat was sown by the instructions of the Goddess of Agriculture. We had no sooner descended into it, than, turning round the mountain towards the left, we found the distinct traces of a Temple, and, farther on, of another similar structure. We observed a tower upon a hill towards our right; and, soon Accopalis after, we saw lying in the plain the marble Torso of a colossal statue, which, with some dif- Marble ficulty, we divested of the soil that had accumulated around it. This torso seemed to be that of a Sphinx, or of a Lion: the latter animal is sometimes represented as drawing the Car of Ceres. It consisted of the white marble of Mount Pen-Still advancing, we perceived upon the telicus. left the vestiges of a Temple, and a Well, at which women were washing linen. This Well appeared to us, in all respects, to correspond with the situation of that famous WELL, called "Avdivor, or, The the flowery, where Ceres is fabled to have rested Well.

Aqueduct.

Temple of Ceres.

we found the plain to be covered with its Ruins. The first thing we noticed was an Aqueduct, part of which is entire. Six complete arches are yet to be seen. It conducted towards the Acropolis, by the Temple of Ceres. The remains of this Temple are more conspicuous than those of any other structure, excepting the Aqueduct. The paved road which led to it is also visible, and the pavement of the Temple yet remains. But to heighten the interest with which we regarded the relics of the Eleusinian fane, and to fulfil the sanguine expectations we had formed, the fragment of a Statue, mentioned by many authors as that of the Goddess herself, appeared in colossal majesty among the mouldering vestiges of her once splendid sanctuary. We found it, exactly as it had been described to us by the

(1) Wheler has placed this well farther from Eleusis, on the road to Megara; and he mentions a small plain which he believed to have been the Rhorian, as distinct from Eleusis, (see "Journ. into Greece." p. 430. Lond. 1682.) which we failed to observe. The Plain of Eleusis is about eight miles long, and four in breadth. Wheler makes the Rharian Plain, "a valley only three or four miles in compass."

600

Statue of the Goddess.

Consul at Nauplia, on the side of the road, immediately before entering the village, and in the midst of a heap of dung, buried as high as the neck, a little beyond the farther extremity of the pavement of the Temple. Yet even this degrading situation had not been assigned to it wholly independent of its antient history. The inhabitants of the small village which is now situate among the ruins of *Eleusis* still regarded this Statue with a very high degree of superstitious veneration. They attributed to its presence the fertility of Superstation of their land; and it was for this reason that they the Inhaheaped around it the manure intended for their fields. They believed that the loss of it would be followed by no less a calamity than the failure of their annual harvests; and they pointed to the ears of bearded wheat, among the sculptured ornaments upon the head of the figure, as a neverfailing indication of the produce of the soil. To this circumstance may perhaps be attributed a main part of the difficulties opposed to its removal, in the various attempts made for the purpose, during the years that have elapsed since it was first noticed by an English traveller . With regard to the allusions subsequently made to it by other writers, as the author has already

(2) Sir George Wheler in 1676.

601

CHAP. X.

CHAP. X.

concentrated every testimony of this nature¹, it will not be necessary to repeat them here. It is sufficient merely to state, that this Statue, consisting of the white marble of Pentelicus; which also afforded the materials of the Temple, bears evident marks of the best age of the Grecian sculpture: but it is in a very ruined state. A vein of schistus, one of the extraneous substances common to the Pentelican marble, traversing the whole mass of the stone in a direction parallel to the back of the Statue, has suffered decomposition during the lapse of ages in which it has remained exposed to the action of the atmosphere; and by its exfoliation, has caused the face and part of the neck of the Statue to fall off; but in the Calathus, which yet remains as an ornament of the head, the sculpture, although much injured, is still fine : and that it was originally finished with the greatest elegance and labour, is evident; because, in the foliage of a chaplet which surrounds the whole, a small poppy or pomegranate is represented upon every leaf, carved and polished with all the perfection of a Caméo. The remains

ΕΠΙΙΕΡΕΙΑΣΦΛΑΟΥΙΑΣΛΑΟΔΑΜΕΙΑΣ ΤΗΣΚΛΕΙΤΟΥΦΛΥΕΩΣΘΥΓΑΤΡΟΣ

Upon a very large cylindrical pedestal of marble, before a small church now occupying a part of the site of a *Temple*¹, perhaps that of *Diana Propylæa*, upon the brow of the hill, we found another *Inscription*: this was observed in the same place by *Spon*, and it was afterwards published in his work².

(1) See the Engraving from Sir W. Gell's accurate View of Eleusis, as published in 1809: "Greek Marbles," p. 15.

(2) Voyage de Grèce, &c. tom. II. p. 335. à la Haye, 1724.

We must now break the thread of our narrative respecting the Antiquities of Eleusis, by a transition as sudden as was the cause of it. Having made some proposals to the priest of the village for the purpose of purchasing and removing the mutilated fragment of the Statue of Ceres, and of using his influence with the people to this effect, we were informed that these measures could only be pursued by obtaining a firman from the Waiwode of Athens; to whom, as lord of the manor, all property of this description belonged. We no sooner received the information, than we resolved to set off instantly from Eleusis; and endeavour to accomplish so desirable an object. For the present, therefore, our observations must be principally confined to the subject of this undertaking.

It has been before stated, that Ibrahim, our Tchohadar, was himself a kinsman of the Governor of Athens; the very person to whom an application in this instance was necessary. This man promised all the assistance in his power; and it was agreed, that the whole management of the affair, as far as it related to the Waiwode, should be left to his discretion. We gave up the design we had formed, of remaining for the Athens. present at Eleusis, and set out for Athens.

Sudden departure for

Via Sacra.

A part of the pavement of the Via Sacra is still visible after quitting the site of the Temple of Ceres, and the remains of several monuments appear upon either side of it. The great ruins of the Aqueduct are upon the left. Soon afterwards, close to the road, on the same side of the way, appears an oblong quadrangular baseof some fine structure, consisting of large blocks of white marble, neatly fitted together. There are other works of the same kind. Perhaps every one of these might be ascertained, by a careful attention to the description given of the objects in this route by Pausanias'. Soon after leaving Eleusis, the road bears eastward across the Thriasian Plain, which is marshy towards the sea; and the remains of the old causeway, consisting of large round stones, overgrown with rushes, along which the annual procession moved from Athens, is conspicuous in many places. Here we crossed the bed of a river almost dry, and saw by the side of it the vestiges of a Temple. Another superb basement appeared in this part of the road, similarly constructed, and of the same materials with

ELEUSIS TO ATHENS.

that we have just noticed. We also observed the Ruins of another Temple, close to the sea, upon our right; of which one column yet remained; and some of the stones were still standing. This district, lying towards the borders of Attica, in a very remote age constituted the regal territory of Crocon². But there is a circumstance, connected with the most antient geography of these regions, which does not appear to have been duly regarded. It was first pointed out by a learned ancestor of the author of these Travels: and as it is of importance in the establishment of an historical fact, nan ely, the common origin of the Goths and the Greeks, it may be here briefly stated, as deduced from his observations and founded upon the authorities he has cited³: it is this, that the whole of the Eleusinian Plain, together with a part of Attica4, were once included Vastextent within the limits of THRACE, whose southern of Anti Thrace frontier extended, as Thucydides informs us', even to the Gulph of Corinth. In the dispute between

Eumolpus the Thracian, and Erectheus king of Athens, the former laid claim to Athens' itself, as part of his father's dominions. The capitals of these two princes were not more than fifteen miles distant from each other; and there was as little difference in their manners as their situation. This appears by the issue of the war, which was so amicably concluded. The terms were, that, for the future, the inhabitants' of both cities. Athens and Eleusis. should be considered as one people²; that the religion of Eleusis, the mysteries so long known, and so much revered under that name, should be received at Athens; the descendants of Eumolpus being entitled to the PRIESTHOOD, and the family of Erectheus to the CROWN'.

The Rhćti.

Two streams of salt water, called *Rhéti* by *Pausanias*, are described by him as the limits between the *Eleusinian* and the *Attic* territories.

ELEUSIS TO ATHENS.

Before we reached them, and nearer to Eleusis, we had passed, as we have stated, the bed of , a river whose dry and pebbled channel was almost exhausted of water. By the side of it we observed the remains of a Tempie before mentioned, about an hundred and fifty paces from the road; and this stream was doubtless the Eleusinian Cephissus of Pausanias⁴. As we Eleusinian drew near to the Rhéti, the road passes close to the sea; and here, upon our left hand, we saw a small lake, which owes its origin to a dam that Salt Lake. has been constructed close to the beach, banking a body of salt water: this water, oozing continually front a sandy stratum, fills the lake, and becomes finally discharged, through two channels, into the Gulph. These appear to have been the ducts, to which Pausanias alludes under the appellation of the Rhéti, which were severally sacred to Ceres and to Proservine: and there is, every reason to believe, that the lake itself is at the least, as antient as the time when the Hiera of those Divinities stood upon its borders; else it were difficult to conceive how the fishes could have been preserved, which the priests alone were permitted to take from the

CHAP. X.

Cephissus.

ELEUSIS TO ATHENS.

CHAP. X. consecrated flood¹. It is hardly credible, that a supply of this nature was afforded by any of the shallow streams which might have been found near to this spot, struggling for a passage through their now exhausted channels. There is something remarkable in the natural history of the lake, besides the saline property of its water. Our guides informed us, that petroleum, or, as it is vulgarly called, mineral tar, is often collected upon its surface; which is extremely probable, owing to the nature of the sand-stone stratum whence the water flows, and to the marshy nature of the land in its vicinity. Two mills are now turned by the two streams issuing from this lake. After having passed the Rhéti, we came to a narrow pass, skirting the base of a marble rock towards the shore, and cut out of the solid stone, having the sea close to us upon our right hand. This narrow pass was evidently the point of separation between the two antient kingdoms of Eumolpus and Erectheus². Hence, turning from the shore towards

 (1) Λίγενται δὶ οἱ 'PELTOI Κόξης ἰξεοὶ καὶ Δήμητρος εἶναι' καὶ τοὺς ἰχθῶς ἰξ αὐτῶν τοῖς ἰςρεῦσίν ἰστιν αἰρεῖν μόνοις. Paus. Attic. c. 37. p.91. ed. Kuhnit.

the left, we entered a narrow valley by a gentle CHAP. ascent, which is the entrance to the defile of Daphne. We perceived, that the perpendicular Defile of Daphne. face of the rock, upon this side of the road, had been artificially planed, and contained niches for votive tablets, as they have been before described in this work. Such appearances are always of importance in the eyes of the literary traveller, because they afford indisputable proofs of the former sanctity of the spot: and although it may be difficult to state precisely what the nature of the Hieron was where the original vows were offered, it will, perhaps, be easy to explain why these testimonies of Pagan piety distinguish this particular part of the Sacred Way: the niches being situate near the spot where the first view of *Eleusis* presented itself to the Athenian devotees, in their annual procession to the city. This seems to have been the rock which is mentioned by Pausanias, under the appellation of PECILE: in his Journey from Athens, The Rock called he mentions its occurrence before his arrival Pacile. at the Rhéti, and at this extremity of the defile'. After this we came to a wall, which

Monastery of Daphne.

Hieron of Apollo.

is supposed to be alluded to by Pausanias as marking the site of a Temple of Venus 1; and presently, in the very centre of the defile, we noticed a large antient Tomb², and arrived at the Monastery of Daphne, whose romantic situation and picturesque appearance, in the midst of rocks and overshadowing pines, has been a theme of admiration amongst all travellers. Part of its materials are said to have been derived from the ruins of the Temple of Venus, now mentioned. The Monastery itself seems to occupy the situation assigned by Pausanias to a Hieron, containing the images of Ceres, Proserpine, Minerva, and Apollo; and which had been originally consecrated to the last of these divinities3. We found the building in a ruined state, and altogether abandoned. Our Ambassador had already removed some of the antiquities which the place formerly contained; but we saw some broken remains of Ionic pillars of white marble, and other fragments of architectural decorations, whose

(3) Ibid.

workmanship denoted the best age of the Grecian CHAP. sculpture; and in all the pavements of the Monastery there were pieces of the finest verdantique breccia, some of which we removed, and sent afterwards to England. The remains. of a Theatre are also visible before leaving this defile upon the right hand; and as the hills View of opened at the other extremity towards sunset, sunset, such a prospect of Athens and of the Athenian Plain, with all the surrounding scenery, burst upon our view, as never has been, nor can be described. It is presented from the mouth or gap, facing the city, which divides Corydallus upon the south, now called Laurel Mountain, from Ægaleon, a projecting part of Mount Parnes upon the north⁴, immediately before descending into the extensive olive-plantations which cover all this side of the plain, upon the banks of the Cephissus. There is no spot whence Athens may be seen that can compare with this point of view; and if, after visiting the city, any one should leave it without coming to this eminence to enjoy the prospect here afforded, he will have formed a very inadequate conception of its grandeur; for all that Nature and Art, by every marvellous combination of vast

(4) See Hobhouse's "Journey through Albania," &c. pp. 370, 371. Lond. 1813.

X.

СНАР. Х.

and splendid objects, can possibly exhibit, aided by the most surprising effect of colour, light, and shade, is here presented to the spectator. The wretched representations made of the scenes in Greece, even by the best designs yet published in books of travels, have often been a subject of regret among those who have witnessed its extraordinary beauties; and, in the list of them, perhaps few may be considered as inferior to the numerous delineations which have appeared of this extraordinary city. But with such a spectacle before his eyes as this now alluded to, how deeply does the traveller deplore, that the impression is not only transitory as far as he is concerned in its enjoyment, but that it is utterly incapable of being transmitted to the minds of others. With such reflections, we reluctantly quitted the spot; and passing downwards to the plain, crossed the Cephissus, and entered the olive-groves extending towards our left, over the site of the Academy. If we may trust the account given us by our Tchohadar, there are not less than forty thousand of these trees; the largest and finest of the kind we had seen in Greece'. The

(1) The most beautiful wood perhaps ever seen in *England* is that of *Athenian* Olive, when polished. A table made of this wood is in the possession of the Earl of *Egremont*. It has been cut from some logs of the

Athenian Cephissus.

Site of the Academy:

ATHENS.

air here is very unwholesome during the summer months, owing to the humidity of the soil, and perhaps principally to its not being properly drained. After descending from the Return to defile of Daphne, we observed a large Tomb upon our left: and before arriving at the site of the Sacred Gate, there are two other Tumuli; and the remains of an Aqueduct may be observed, extending in the direction of the Academy. The Tombs are mentioned by Pausanias, in his journey to Eleusis.

In the evening, we arrived once more in ATHENS; and calling upon our former companion, Lusieri, were hailed by him with the first news of peace between France and England;a joyful intelligence for us, as we instantly resolved to pass through France, in our journey home. He also told us of the valuable acquisitions, in vases, gems, and medals, which he had made in Ægina, after we had left him upon that island.

The next morning our Tchohadar waited upon Negotiahis relation the Waiwode, and communicated to the Waihim the subject of our wishes respecting the

Athens.

ATHENS.

Eleusinian marble. After some deliberation, CHAP. the Governor acceded to our request; but upon the express condition, that we would obtain for him a small English telescope belonging to Signor Lusieri. This request opposed a very serious obstacle to our views; because it became necessary to divulge the secret of our undertaking to a person indeed in whom we could confide, but who was at the moment actually employed in collecting every thing of this kind for our Ambassador; who had prohibited the removal of any article of antient sculpture on the part of his countrymen, excepting into his own warehouses, as an addition to the immense Collection he was then forming, in the name, and with the power, of the British Nation. Yet there was no time to lose: the Waiwode might soon mention the matter himself to an intriguing Consul, who paid him a daily visit; and then, (although the Statue were the Waiwode's property, and, of course, the right to dispose of it belonged exclusively to him) we had reason to believe that our project would be instantly frustrated. Accordingly, we made Lusieri acquainted with the whole affair; and our generous friend, disdaining every unworthy consideration, not only resigned the telescope upon our promise of sending him another from

X.

England', out very kindly undertook to present it himself to the Waiwode, and persuade him to observe silence with the Consul respecting the measures we were then pursuing. The desired firmán was therefore obtained. To complete the whole, it was now necessary to apply to the Consul himself, for the use of the ferry-boat plying between Salamis and the main land; as the only means of conveying this enormous piece of marble to the Piræeus, if we should be so fortunate as to succeed in our endeavours of moving it from its place towards the shore. Such an application, as it might be expected, excited the Consul's curiosity to the highest degree: but after many questions, as to the object for which the boat was required, we succeeded in lulling his suspicions; or, if he had any notion of our intention, he believed that all attempts to remove the Statue would be made in vain. A messenger was accordingly despatched to put the boat under our orders. Every thing being now ready, we set out again for Eleusis: and perhaps a further narrative of

(1) We had the satisfaction of hearing that he has since received it safe. It was a very fine telescope made by *Ramsden*: and it was conveyed to him by the author's friend, Mr. *Walpole*, whose *Manuscrips*. Journal has afforded a valuable addition to this work.

the means used by private individuals, unaided by diplomatic power or patronage, to procure for the University of which they are members this interesting monument of the Arts and Mythology of *Greece*, although a part of it has been already before the public, may not be deemed an unwelcome addition to this v lume.

Method devised for removing the Statue of Ceres.

The difficulties to be encountered were not trivial: we carried with us from Athens but few implements: a rope of twisted herbs, and some large nails, were all that the city afforded, as likely to aid the operation. Neither a wheeled carriage, nor blocks, nor pulleys, nor even a saw, could be procured. Fortunately, we found at Eleusis several long poles, an axe, and a small saw about six inches in length, such as cutlers sometimes adapt to the handle of a pocket knife. With these we began the work. The stoutest of the poles were cut, and pieces were nailed in a triangular form, having transverse beams at the vertex and base. Weak as our machine was, it acquired considerable strength by the weight of the Statue, when placed upon the transverse beams. With the remainder of the poles were made rollers, over which the triangular frame might move. The rope was then fastened to each extremity of the transverse beams. This

simple contrivance succeeded, when perhaps CHAP. more complicate machinery might have failed : and a mass of marble weighing near two tons was moved over the brow of the hill or Acropolis of Eleusis, and from thence to the sea, in about nine hours.

An hundred peasants were collected from the village and neighbourhood of Eleusis, and near fifty boys. The peasants were ranged, forty on each side, to work at the ropes; some being employed, with levers, to raise the machine; when rocks or large stones opposed its progress. The boys who were not strong enough to work at the ropes and levers, were engaged in taking up the rollers as fast as the machine left them, and in placing them again in the front.

But the superstition of the inhabitants of Difficulties Elensis, respecting an idol which they all re- tered. garded as the protectress of their fields, was not the least obstacle to be overcome. In the evening, soon after our arrival with the firman, an accident happened which had nearly put an end to the undertaking. While the inhabitants were conversing with the Tchohadar, as to the means of its removal, an ox, loosed from its yoke, came and placed itself before the Statue;

CHAP.

and, after butting with its horns for some time against the marble, ran off with considerable speed, bellowing, into the Plain of Eleusis. Instantly, a general murmur prevailed; and several women joining in the clamour, it was with difficulty any proposal could be made. "They had been always," they said, " famous for their corn; and the fertility of the land would cease when the Statue was removed." Such were exactly the words of Cicero with respect to the Sicilians, when Verres removed the Statue of Ceres : - "Quòd, CERERE VIOLATA, OMNES CULTUS FRUCTUSQUE CERERIS IN HIS LOCIS INTERLISSE ARBITRANTUR¹." It was late at night before these scruples were removed. On the following morning, November the twenty-second, the boat arrived from Salamis, attended by four monks, who rendered us all the service in their power; but they seemed perfectly panic-struck when we told them that it was our intention to send the Statue in their vessel to the Pirceus; and betrayed the helplessness of infants when

⁽¹⁾ Cicero in Verr. lib. iv. c. 51. The circumstances which attended the removal of the Statues of Ceres and Triptolemus from the Temple at Enna, by Verres, were very similar to those which opposed themselves to our undertaking.—" His pulchritudo periculo, amplitudo saluti fuit, qudd eorum demolitio, atque asportatio, perdifficilis videbatur." Vidlib. iv. c. 49.

persuaded to join in the labour. The people had CHAP. assembled, and stood around the Statue; but no one among them ventured to begin the work. They believed that the arm of any person would fall off who should dare to touch the marble, or to disturb its position. Upon festival-days they had been accustomed to place before it a burning lamp. Presently, however, the Priest of Eleusis, partly induced by entreaty, and partly terrified by the menaces of the Tchohadar, put on his canonical vestments, as for a ceremony of high mass, and, descending into the hollow where the Statue remained upright, after the rubbish around it had been taken away, gave the first blow with a pickaxe for the removal of the soil, that the people might be convinced no calamity would befal the labourers. The work then went on briskly enough: already the immense mass of marble began to incline from its perpendicular; and the triangular frame was placed in such a situation, that, as the Statue fell, it came gradually upon the transverse beams. The rope was then cut, and fastened as traces; one half of it upon either side; and our machine, supported by wooden rollers, was easily made to move. In this manner, at midday, it had reached the brow of the hill above the old port; whence the descent towards the

621

x.

CHAP. shore, although among ruins, and obstructed x. by large stones, was more easy.

> New difficulties now occurred. It was found that the water near to the shore was too shallow to admit the approach of the boat from Salamis, for the conveyance of the Statue on board; and the old quay of Eleusis, which consisted of immense blocks of marble stretching out into deeper water, was in such a ruined state, that several wide chasms appeared, through which the water flowed. Across these chasms it would be necessary to construct temporary bridges, for which timber would be required; and even then the boat could not be brought close enough to the extremity of the quay to receive the Statue. Here the whole of our project seemed likely to meet with its termination; for it was quite impossible, without any mechanical aid, to raise a mass of marble weighing nearly two tons, so as to convey it into the boat. At this critical moment, when we were preparing to abandon the undertaking, a large Casiot vessel made her appearance, sailing between Salamis and the Eleusinian coast. We instantly pushed off in the boat, and hailed her; and the Captain consenting to come on shore, we not only hired his ship to take the

Statue to Smyrna, but also engaged the assistance of his crew, with their boats and rigging, to assist in its removal. These men worked with spirit and skill; and made the rest of the operation a mere amusement. At sunset, we saw the Statue stationed at the very utmost extremity of the pier-head.

Early on the following day, November the Success of the Undertwenty-third, two boats belonging to the vessel, taking. and the Salamis ferry-boat, were placed alongside of each other, between the ship and the pier; and planks were laid across, so as to form a kind of stage, upon which the Casiot sailors might work the blocks and ropes. A small cable was also warped round the Statue; and twelve blocks being brought to act all at once upon it, the Goddess was raised almost to the yard-arm; whence, after remaining suspended a short time, she was lowered into the hold; and the Eleusinians taking leave of her', the vessel sailed for Smyrna. Having thus ended the narrative of our adventure, we may now conclude our observations concerning the Ruins of

CHAP.

X.

⁽¹⁾ They predicted the wreck of the ship which should convey it : and it is a curious circumstance, that their augury was completely fulfilled, in the loss of the Princessa merchantman, off Beachy Head, having the Statue on board.

CHAP. X. Further account of Eleusis.

624

Eleusis. These have been since surveyed with so much attention by other travellers, that we shall merely state such things as may perhaps have escaped their notice.

Long Walls.

It has been supposed, that the "Long Walls" of Athens, which extended from the Acropolis to the sea, and inclosed the Piræeus, were a peculiar feature of the Athenian city : but this is by no means true. Such a method of connecting the harbours with the citadels of Greece, was a very general characteristic of the manners of the Grecian people, in all places where the Acropolis was not actually situate upon the shore. This, for example, was the case at Corinth : it may also be remarked at Megara, and at Eleusis. The Acropolis of Eleusis is half a mile distant from the harbour. Between the base of the hill upon which the Citadel stood, and the sea. this distance is occupied by a small plain; and from the number of ruined foundations, the vestiges of temples, and of other Hiera, all over this plain towards the sea, we were inclined to differ from Wheler, and from every other traveller, by considering this piece of land as the identical spot called RHARIUM; where, according to the antient traditions of Eleusis, corn was first sown. The severe illness with

which Triptolemus was afflicted, and from which he was restored to health by Ceres, is still liable to attack all who expose themselves to the malaria now covering this part of the Eleusinian territory: and the evil might again be removed, as it then was, by subjecting the same spot once more to the labours of agriculture; carefully cleansing and draining the soil. This being the Rharian Plain; the great of the plain of Eleusis, upon the other side of the Acropolis, towards the west, is consequently the Thriasian. The Rharian Plain being small, and between the Citadel and the sea, was in all probability occupied, in antient times, by the city of *Eleusis*, and by many of its sacred buildings. The remains of the two Long Walls, which extended from the Citadel to the sea, and inclosed the port, are yet visible; and within this inclosure were perhaps the temples of Triptolemus and of Neptune1. The Area and Temples of Altar of Triptolemus were undoubtedly within mus, of the Rharian Plain². The temple of Diana Pro- Neptune, and of pylæa was, of course, as its name implies, the Diana Propylæa. Holy Gate of the Citadel; and probably it stood

Rharian and Thriasian Plains.

upon or near to the spot which is now occupied by a small Church or Chapel upon the brow. of the hill. That of Ceres, built during the administration of Pericles, by Ictinus the architect of the Parthenon at Athens, and mentioned by Plutarch¹, by Strato², and by Vitruvius³, wasperhaps destroyed before the invasion of Alaric, at the end of the fourth century; and even before the time of Pausanias in the second; as it is not mentioned by him. But as Phidias presided over all the artists employed to complete it*, and the marble of Mount Pentelicus was employed in its construction, it is easily to be recognised in those Ruins among which the Statue was discovered; an area or pavement, leading to it, being of Pentelican marble, and still existing, at the commencement of the Thriasian Plain, upon the western side of the Acropolis. The antient port of Eleusis was. entirely artificial; being inclosed by a semicircular pier of white marble. Going to this port from the modern village (which does not contain forty houses), along the remains of the

Port of Eleusis.
